> think I will too...

Indeed, especially the veracity of these signals is allegedly rooted in the fact that "the SETI Institute thought they might have picked up signals from this star back on September 17th and their description of the events that followed is here. . . ." [1], where the official statement on the SETI Institute page (that is even linked to) clearly indicates that it was a false positive signal, and that the signal was not of extraterrestrial origin.

You don't get it, They would not diclose that they got a
signal unless they were very sure of it, becuase if they were later
proven wrong their money problem would get worse.
>

I am all but certian that SETI has recorded at least one ET

signal, the problem is they are not able to prove it is an ET signal,
and are afraid of crying wolf. It isn't a matter of cover up but of
not being certain

Sorry about having to use a obivously fake ID but

<Conspiracy mode> Surely the reason that they don't care about SETI is that
the aliens are here on Earth already and they have there hands full covering

that up and in the light of them being here already anything SETI finds is
minor!! </Conspiracy mode>

Actually, if you pointed a dish at the sky, if there was a star in line
with your dish, it would be in line once per day as the earth rotated
under it. Of course, if you were involved in real SETI and knew about
the motion of the stars, you'd take this into account and use an
equatorial mount to keep the star you were looking at tracked until
you'd decided there was nothing coming from it and moved to a different
target, in which case the daily burst would be a strange result.

Oh, I don't need to flame anyone, I'd like SETI to find something.

Er, you mean the SETI "organisation" is out to get you? I'm confused.

I have the following items for sale. Prices are negotiable. Shipping to be paid by buyer, US Money orders anly please.

Uniden Bearcat BCT-7 800MHz mobile scanner with wall charger/adapter, antenna. Unit 10/10 condition, has roadway Highway Partol Alert. New item cost $199, sell for $125.00 obo

Uniden Bearcat 350A, mobile with antenna, 12V car adapter, sell $50 obo

MAXON sl500 UHF 99 channel transceiver with battery/charger, works fine $100 obo

4" Sharp BW LCD NTSC input display with power supply, input 75ohm composite video, great for monitor $100.00 obo

APPLE Macintosh LCIII with 14" color monitor, keyboard/mouse, HP Deskwriter 680C color inkjet printer(mac), Zoom 33.6K modem(external), SyQuest Ez-Flyer 230MB tape backup (with 2 cartridges) and some software, unit works fine. Asking $250 for setup, will sell units separately.

CASIO RM-7400G Scientific Calculator with IR remote Over Head Projector screen unit. Calc does graphs, sketches and all scientific functions. Great shape, perfect for teaching with power supply for OHP(also uses batteries) Sell setup for $85.00

Panasonic SL-S162 Portable CD player, works great, no headphones to sell. Asking $30.00 obo

E-mail with questions..Thanks

Uh oh, here we go again....

Are these signals coming from Hale-Bopp?

Is there a Saturn-Like-Object involved?

Are strange geeks buying up Nike shoes at the
local Wal-Mart, and having themselves neutered?

Enquiring minds want to know....   ;-)

>> instead of my email box also being Involved
>
>Oh, I don't need to flame anyone, I'd like SETI to find something.
>
>> In adition soory that after a death threat or two
>> I have to admit that I will changing disguing refernces
>> my plans and my travels
>
>Er, you mean the SETI "organisation" is out to get you? I'm confused.

Not at all I mean I do hang out in the Policy Code NoCode flmae war,,
and a couple of the posters are really losing all sense of proprotion.
Being NoCode has been campared favoring the Cruisifixition of Christ,
just as a recent example

Sorry about having to use a obivously fake ID but
I would like to confine thethe flame to the Newsgroup
instead of my email box also being Involved

In adition soory that after a death threat or two
I have to admit that I will changing disguing refernces
my plans and my travels

Some sources refer that the Effelsberg Radio Observatory in Effelsberg, Germany, is supposed to be gathering data of the alleged SETI signals from EQ Pegasi.

The Effelsberg 100-meter Radio Telescope is the World's largest fully steerable instrument of it's kind. This extreme-precision instrument is used exclusively for research in radio astronomy, both as a stand-alone instrument and regularly for global Very Long Baseline Interferometry (VLBI) experiments.

http://www.mpifr-bonn.mpg.de/effberg.html

Any further information?

We got a Butternut HF4B antenna without any documentation and would like to use this antenna.

Does someone have any hints were to find these antennas documentation. Or has it themselves.

> Seems to me that most people consider 8X as an alternative to 58/U, not
> to 8/U (though I could be wrong), mainly because of the diameter.

Thats about how I see it, foam rg-58. It's got a good bit less loss than
58 but still not quite in the league of the rg-8 or rg-213. Which are
the same, but the 213 mil-spec and direct burial. I recommend it over
rg-8. Also it has the non-contaminating jacket.
I think 8x has it's place for medium power short runs. But I'm partial
to 213. MK

I have several 20LF6 and 6LF6 sweep tubes, originally meant as horizontal outputs in TVs but today mostly used in homebrew linear amplifiers, for sale.

20LF6 - NOS - 4 Only - AES charges $50, our regular price is $38.75, until Sep. 25 I will let up to 4 go for $25 each.

6LF6 - NOS - AES charges $48.50, our price is $43.56.

6LF6 - Used (in TV only)/Tested Good - 3 only - Our regular price is $25.00 (AES charges the same), until Sep. 25 they are $20 each.

We take MC, Visa, money orders. Please email me if you have any questions.

Heck, in the Wholly Babble, god(tm) admits that he(tm) CREATES evil!
Somewhere in Isaiah (45:7, if memory serves).

>Somewhere in Isaiah (45:7, if memory serves).

Hey, thanks for the tidbit, I'm arguing with a fundy who claimed God cannot coexist with evil, but thanks to your reference I can now tell him that, according to the "Wholly Babble," God created it!!! Of course, some simple logic would tell you that if God is the creator of all things then he must've created evil, but fundies cannot avoid it when the Bible tells 'em so.

Oh yeah, in my copy of the "Wholly Babble," the fundies have an annotation which supposedly resolves the contradiction. It is as follows: Heb. 'ra,' meaning "sorrow," "wretchedness," "adversity," "afflictions," "calamities," but never translated sin. God created evil only in the sense that He made sorrow, wretchedness, etc., to be the sure fruits of sin.

The fundy will then argue that man brought sin into the world with 'the fall,' which leads us all back to the problem of evil. God could've just as easily created a world in which man freely chose to do good as one in which man freely chose evil, so God is ultimately accountable for everything.

The fundy will then crawl behind faith, and die. Good riddance... .

Follow up to rec.radio.amateur.antenna,

I have been using lpcad to design log-periodic antennas in the UHF range.

The lpcad program is fine for computing the elements and spacing.

For the impedance it always answers " optimum boom impedance is 200 ohms", whatever the other design parameters including elements diameter.

From the photos of professional log-periodic antennas in the VHF / UHF range, they always use a 50 ohm boom: two square tubings very close together. This makes more sense for me than a 200 ohm boom if you want to connect a 50 ohm coax.

200 ohms is OK for the HF bands with a 4:1 balun/transformer.

I only have an old (1977) ARRL antenna book, and I think the formula giving the impedance of a log-periodic antennas is not accurate either.

Peter Rhodes also states in this book that "tilting the elements toward the apex will increase gain 3 to 5 dB". How come no professional antenna makers had the idea to simply bend the elements to take advantage of this huge increase in gain?

I would appreciate the right formula for the impedance, or a freeware able to compute accurately the impedance.

Thanks & 73.

You needed someone to tell you this?  God created Satan (in christian
mythology) right?  And he could destroy him as well right?  But he
chooses not to, right?  Therefore, God is EVIL.

Well, what I have done is to put the authors of these posts in my kill file, along with the key words e-bay, ebay, etc. This way I never see the E-Bay posts - the down side is I never see any of the Author's posts, but I guess this is their loss for posting the E-Bay spam in the first place.

Very little without going to a moderated forum. I guess a new class of forum needs to exist that would allow for the canceling of 'SPAM' at discretion of the system operators of every node in the chain.

Also filtering should be added to all news group clients (and servers if the above was true). Moderated means all messages would go to the Moderator and he would post the ones that fit the forums' guidelines.

I have the following equipment

FT-101B = about 20 hrs = 9++, mic and power cord
FL-2100B = Amp = 9+
FV-101B = VFO = 8.5
YC-601 = Freq. counter = 8.5
YO-100 = Scope = 9
FTV-650B = 6M = 9
FTV-250 = 2M = 9
YP-150Z = Dummy load/Watt meter = 9 (rare)
YD-844A = Desk Mic = 9+

If you are hunting a very nice near complete station here it is and this one won't be here long !

You would only need SP-101 Speaker or SP-101PB Phone patch and QTR-24 World clock to complete station http://www.qsl.net/nw2m/ as seen here.

```
I would like to sell as a complete set, but "might" consider splitting up

There used to be a place called Ham Heaven in Waukeegan (I think). I
bought a used HT from them in 1992. Not a bad place but I don't think they
are in business anymore:-(
You could wait for the Lake County Ham Fest and get just about anything
your wallet can handle.

Later...

Well, I have rec'd a lot of mail and see some posts about a listing I placed... not sure what all groups. I've had some trouble with my server the last few days and it has apparantly had a seizure and belched out 20 copies of the same post...(I assume this is the problem.. the upset individuals are not great communicators...) I've posted, bought and sold here for some time and never dreamed that something like this could happen, I've always met intelligent, polite people.... what the heck happened???

At any rate, I must apologize to the group for any hang-ups the problem has caused, whatever it was. Could someone of better temper and maturity please email and let me know if there truly is a problem and what I can do to fix it? I would appreciate it.

As for the folks who emailed and posted those beautifully worded messages.... I say this: Before flying off the handle on someone about something that is (to me) not a life-changing experience and no big deal, you should have asked, instead of posting a useless msg and wasting even more space....like an idiot, no? It never ceases to amaze me, how quickly people feel free to act 'tough' when they assume the other person will never be standing in front of them in 'real' life..... You don't know me or who I am. I could be living in walking distance of you. You need to grow up, get up from your computer once in a while and not take this so seriously... None of it will matter in the large scope of things, anyway. There's a whole world out there, full of real people. Go check it out sometime.

It's funny..... 20 people who have no idea who I am are feeling free to be rude, and not one person pointed out the problem or asked if it was an accident or if I needed help.. I 've managed to piece together what it was anyway. thanks a lot, guys.

Again, if there truly is a problem of some kind, I apologize to the group.
Sorry I had to post this msg as well.
thanks,
Randy
p.s. Thanks to the folks who answered the posts... I'll be getting back to ya as soon as I can.

I have a opportunity that Amateur Radio Operators living in a community that has anti-antenna Covenants, Conditions and Restrictions can only dream about! I have won the right to put my antennas up!

Even better, I have been able to convince them that the existing Covenant (an all out ban on radio and television antennas) could be struck down because of the recent Federal laws in regards to Broadcast and Satellite Antennas (CFR Title 47 1.4000).

I've proposed and they are willing to consider, that I craft (or obtain) a set of Covenants that address the matter.

What I need is a sample set of Covenants to propose to my Home Owner's Association. I hoping that somebody has already drafted such a document.

If not, I'll need input for creating a set that a typical Ham could live with, but would still give the Non-Hams warm, fuzzy feelings.

Remind everyone involved of the inverse square law. Make it clear that
RF exposure, and potential RFI, is reduced by taller antenna structures.
This benefits everyone. Perhaps a covenant should state that no antenna
be allowed which is mounted less than 75 feet above any dwelling structure.
Verbiage about good engineering practice in the installation of towers is
likely a good idea too since it makes the insurance carriers have warm
and fuzzy feelings.

Interesting argument....'don't alert the public to the potential hazard of antennas because it will make them jumpy about our antennas'

I sympathize with the underlying protectiveness, but in our great democracy (well, as close as we get here in the USA), choices may be made politically, and then accurate information is required to make reasonable decisions.

It has NOT been settled that our antennas present NO hazard. If I am wrong, please cite the authoritative literature on it. The book has not yet been written. Yes, from what we know, the HF stuff is pretty low hazard, but it is not zero.

Honesty is important. Hiding information is not becoming of radio amateurs in my opinion.

I don't think so.....We sure don't need the public being "alerted" that our numerous wires strung from trees, house rooftops, upstairs balconies in apartment buildings etc etc, are in *any* way a hazard to anyones health, including the resident ham. That is a sure route to getting ALL antennas observed with a wary eye, as "dangerous objects", to be avoided, in fact "why do we have to put up with the risk....." you can fill in the blanks. Banishment surely follows, somewhere down the road.

Hams have lived in close proximity to their radiating wires for the entire time

ham radio has been around. The recently initiated "survey" of amateur antenna radiation "hazard" proves our antennas are such a non-hazard as to be almost completely unnecessary. There are rare exceptions-and that is why each ham should do the survey, to fix it in his mind just what parameters would be

potentially unsafe
if exceeded. In the case of my station, I'd have to climb the tower and sit
near the feedpoint for hours at nearly legal limit power before I'd begin to be
in potential jeopardy. And very many broadcast engineers have spent their
working lifetime in very close proximity to very strong Rf fields with
no ill effects over many years. Same with military personnel.

The RF biohazard survey is here to stay, and at least it can be justified
as necessary since there ARE a very few potential RF hazards that hams
need to be aware to watch for. But we sure don't need to point to our
antennas and tell the world the higher they are, the safer the public is.
That is not true, it certainly is not in our best interests, it does nothing to
safeguard the public, and would surely come back to haunt us by
scaring officials and members of the public without any reason.

If you knew nothing about the subject of RF hazard and were given that
"higher is safer" statement, what would you think?

>
> Honesty is important. Hiding information is not becoming of radio amateurs in my opinion.

From the tone of your post you must not have not performed the survey of your station. I did. The only antenna even remotely anywhere close to suggesting a hazard would be the 5/8 wave 2meter groundplane on the house roof, and at the power level I never exceed, I'd have to sit at rooftop, within a couple of feet of it before any question is raised.

If you feel that it is "dishonest" that I think it alarmist to scare the public and officialdom just for the purpose of obtaining sanction to hoist your tower/antenna to heights not otherwise permitted, and no real basis for this "scare" actually exists, you must surely have a curious dictionary to which you refer. THAT act is in itself dishonest, and the fallout potentially much more far reaching than any simple zoning matter could ever stretch.

Another interesting argument, 'to explain that putting your antenna
higher will reduce any potential hazard' is dishonest! Very
interesting indeed. I think you over react to my point.

I have certainly done the survey, and according to the results,
no problem. That does not end the story though. It IS true
that a higher antenna will lower exposure, no matter what your
opinion is of a hazard level. That is important to know, some
may choose less exposure, even though the FCC apparently
believes that more is "safe". Do you honestly believe the
FCC has the last word on the actual effects of RF at this time?
If you do, well, good for you. I have young children in my
house, and while I would not hesitate to take them to visit
a hams house where there is some operation going on, IF I
can reduce the exposure in my own home or that of my neighbor
I will do so. I would rather expose infants to less RF
rather than more, and when I can do so, I will pursue that
route.

I do not argue that some neighbors might be alarmist, but is
that an argument against explaining the truth ... that higher
antennas reduce exposure?

I trust that my neighbors will eventually understand and
get to the "right" decision, but I know that is not always
true. I think the argument about higher antennas is a good
one.

Your point is made, evidently mine was not. I'll try again.
I contend that is is dishonest to misinform regulators or the public
concerning hazards that are non-existant by virtue of the fact that
the distances involved are many times that considered by the only

authorities recognized as potentially hazardous. The fact that the
total extent of what is possibly hazardous is not known cannot be a
factor.
Once the distances to antennas concerned
is several times the most minor factor, the risk must be considered to
be
nonexistant. Any other method is paranoia. 90 years of RF experience
cannot tell us the whole the story, just most of it.
  If I was concerned for my children's safety from RF biohazard, I'd be
making sure they didn't stand at eye level in front of an operating
microwave
oven, nor go outside into the sun without sunblock or long sleeve
clothing.
Let's leave the ham radio antennas within the perspective which they
truly
belong.

Sure, the hazard goes from nonexistant to nonexistant minus (whatever
factor exists). NOT good enough reason to sound unwarranted alarms with
neighbors and/or regulators. We might as well place our antennas in the
Clark belt otherwise.

You can take this wherever you want. A few years ago I read of a study
that clearly showed, statistically, that children raised on the same
side of the
street with AC power lines had a greater incidence of leukemia than
those
raised in homes across the street from those power lines. What does it
mean? Who knows? Workers spend entire careers in huge power plants
and have no ill effects. Is the sky falling???

> I do not argue that some neighbors might be alarmist, but is
> that an argument against explaining the truth ... that higher
> antennas reduce exposure?

If that's how you see the "truth", go ahead and alert all your
neighbors. Just
be kind enough to refrain from coming into my neighborhood, please.

> I trust that my neighbors will eventually understand and
> get to the "right" decision, but I know that is not always
> true. I think the argument about higher antennas is a good
> one.

I'd bet on the eventual outcome, if that argument is pursued with
neighbors
and community planners. Nothing like a little fear, particularly of
something
that you can see and actually do something about, to start the wheels
turning. If you don't believe it, well, perhape you haven't read about

extremely restrictive CCR's and zoning ordinances. Lawyers can easily
write one sentence CCRs that totally prevent you from any antenna of
any
type not preapproved. I've seen one, in particular on the west coast.
It simply said "no additional transmission lines of any type".
That pretty well covers it, doesn't it? Of course
such things might be overturned, if you want to finance the effort.

G,R.Enfield 1926 #171 Wavemeter "C" 600-2400. This item is British Military. Comes in a 8"x8"x8" wooden box. Inside lid has instructions on how to use it. No modifications apparent. Outside of box is a bit weathered, but inside is good, and under the deck, the parts look like new. If you are interested, e mail me. I think it should be worth around $25.00US - (I live in Canada - dont know what that works out to in British funds)

Wonder why hams have such a high cataract and cancer rate, huh, Dick?
And just look what it has done to your once functional brain.

Unfortunately, reminding people of the inverse square law really doesn'tmake
for a Covenant. While it would be nice to have a antenna at 75 feet,
the city ordinance restricts it to 65 feet.

But the object is to put in place a set of covenants that give Hams at least
a fighting chance to use their licenses.

The main thing that I'm fighting is the paranoia of the the Association from
interference. That one can only be fought with education, and perhaps
a covenant, that assures the membership that help is available to track

down and help resolve the interference issues.

To a lesser degree that the Association doesn't want to have antennas because they consider them "eyesores". However, they don't really get a choice in this because Federal law now allows Satellite and Television Antennas.

We already have that situation. Because the public is generally ignorant about radiation, the inverse square law, etc, they are already fearful of antennas. The three major reasons the public gives for opposing antenna structures are fear of radiation, fear of RFI, and the eyesore argument.

The public is generally confused about radiation. Most think of radiation in terms of atom bombs. Thus they are already terrified of it. It is to our advantage to educate them about the difference between ionizing and non-ionizing radiation, and the true risks of each (as best as those risks are known). We need to make them aware of the protection offered by the inverse square law. Covenants which restrict antenna height increase radiation exposure risks. They do not reduce them as the public seems to think. We need to ensure that the HOA understands this.

The public also associates visible antennas with RFI. We need to educate them about the inverse square law, and the benefit of getting the antenna higher with respect to RFI to their equipment. Covenants which restrict antenna height increase the potential for RFI. We need to make sure that the HOA knows this too.

Trying to keep the public ignorant of these realities will only let their worst fears go unanswered. It is far better to be as up front and truthful with them as possible. There's bound to be someone at the HOA meeting with a Xerox of one of the scare pamphlets proclaiming the perils of radiation in a false and unrealistic fashion. We'll be asked about that, and it is far better if we have already been up front about it, and explained how we're required to know about this hazard and how to deal with it as part of our licensing requirement.

Finally there is the eyesore argument. There isn't a lot we can do about this except be willing to work with the archetectural committee to come up with something acceptable in their sight, but if we make the HOA understands that higher antennas mean less risk to themselves and their electronic equipment, we may have a chance of making these tall structures more attractive in their eyes, or at least become the lesser of two evils.

As far as the risk of banishment goes, we reduce the risk that the HOA
will simply ban transmitting equipment altogether by being up front and
honest with them rather than letting them believe the scare pamphlets.
Establishing credibility is critical, and you don't do that by trying to conceal
things.

You say my argument makes sense on the "surface", well so does everything you have mentioned. So!!!

>While your argument makes sense on the surface, I wager the dropping of
>(more stringent) CW testing will not be accompanied by an increase in
>standards elsewhere in the test. I site the history of the testing program
>here as a clear example of how standards slowly, but surely drop.

There are some people that definitely fit into the catagory you mentioned, I do not fit into that mold however. I have "credit" in 13WPM CW as I have "credit" in three semesters of college calculus. I have no use for either one and find neither one enjoyable or usefull and after acquiring the passing grades(so I can go on and acheive what I really wanted)   for both fields of study, have promptly let them go. Haven't missed calculus in 25 years.

There is some truth to the fact that why know the nitty-gritty about capacitors and resistors if there is no radio kits available to assemble anymore? How many radios have you built lately? Or are you running one of those high priced solid state rigs with a solid state amp, beam rotor and all the extras?

I am not one of those that is advocating lowering standards, just changing the testing material to something equally as challenging but usefull for most hams on an everyday bases. You don't need to know calculus to be a brain doctor but perhaps if you want to be a rocket scientist.

>It has been my experience that many opposed to the CW requirement simply

>RS and buy an HT. Why should they have to learn all that irrelevant stuff?
> They aren't building radios. All they need to know are operating
>protocols and a little bit on safe operation.

See my statement above, I have credit in 13WPM and it was ugly from start to finish.

I am not bitter about CW. Really doesn't matter one way or the other to me about testing or not. I have acquired all the privleges I care for. In fact any form of HF doesn't excite me anymore. Researching

VHF radio site loctions, land ownership, repeater equipment financing,-acquistion , linking radios, finding the area of coverage and installation interest me much more than..... making very brief HF contacts to far off stations that sound like Donald Duck, through static crashes, thats if the band is up or down, AND then all you get is "you are a 59, see ya". OR someone running a big amp, with a beam overpowering everyone and not even responding to your barefoot weak signal. Hmmmm, lots of fun for lots of input and very little output. To each his own.

It just kills me to hear city folk, while traveling on vacation outside of their small world, trying to get through to a far off repeater with their little bitty HT and wondering why they are marginal. I might add that some of these folks are big HF-CW fans, by listening to some of their conversations with the locals. My $0.02 worth as well.

If you want a challenge, go to a real college and get a real degree that will land you a real job. Or climb Mt Everst.

Please tell me where would you get electric power to run your rig if your worldwide catastrophy occured?   Do you think your electrical wall socket would still be working? Damn few hams have the capability to operate when local power is interupted for only brief times (floods, hurricanes, ice-snow storms etc) Get real! If your "worldwide catastrophy" occured and I survived, radios would be my last concern. I would be getting myself a gun and heading to the easiest food gathering source plus acquiring shelter, fighting off roving bands of desperate starving people etc,

Most of my ham friends in AZ have backup systems like solar panels and/or propane/diesel/gasoline powered generators in addition to food, water, and weapons.
IMO, all *serious* hams have backup power.

Regarding the US Amateur Radio license restructuring proposal by the ARRL:

I am currently a General class licensee, and an ARRL member. I obtained my General upgrade this past January. Prior to this, I was a Tech Plus licensee for around ten years, and a Novice before that for two years.

I was tuning across the 40m band last week, and overheard several Advanced and Extra licensees bemoaning the proposal, bleating about how they have already resigned their V.E. status and quit the ARRL. This is stupid! How I wished the discussion were being held in the General sub-band, so some opposing viewpoints could be heard.

I think the existing license structure is flawed. Disallowing Tech Plus operators HF voice below 28 MHz is to prevent them from talking to those who would encourage them to upgrade. This effectively cuts off the Tech Plus from most of the HF community, and has driven a wedge between two large segments of the amateur population. The US code requirements are out-of-line with the rest of the world. I know of many skilled Tech Plus operators who have either sold off their HF equipment, or have quit the hobby entirely - a shame. Clearly, somthing needs to be done.

In attempting to solve the problem, the ARRL may have gone a little too far. For instance, I am concerned that giving a Novice what amounts to a General ticket will remove any incentive to upgrade. Novices and Tech Plus operators should have to pass the General written elements BEFORE getting those HF voice privileges. However, the only alternative to the ARRL's proposal may be to maintain the status quo for many more years, and that is completely unacceptable. I understand that last month, only THREE novice tickets were issued.

Ever demonstrate low band DX to kids? When you make a phone contact, they can hear and understand what is going on. WOW! You're really talking to someone in Russia or the Canary Islands... COOL! Make the same contact in CW and they are lost. CW is alien, and appears to be a formidable obstacle to most people, regardless of the reality. Yes, we're a society of instant gratification - get over it...

Amateur Radio is losing steam and must be revitalized to offset new and exciting modes of communication that have no license requirements (i.e. the ubiquity of the Internet and cellular telephones). Our government has demonstrated a willingness to auction off underutilized radio spectrum to the highest bidder. If there aren't enough amateurs to justify and defend our frequency allocations, they will certainly be diminished.

Does anyone really think "lowering the standards" to 5 WPM code for HF phone privileges will result in a massive influx of CB-type operators? I don't think so! Rather, people with a genuine interest in radio will be given a chance to experience the thrill of making their first DX phone contact. Personally, I think we should retain the Novice, but add Novice HF phone sub-bands in 80, 40 and 20 meters, and dump the Extra Class. (Asbestos underwear on! ;v)

I think the ARRL proposal will go a long way toward increasing public awareness of, and interest in our hobby. I am all for it... YES!

Regards,
Michael Borowiec, N9EUZ

Congradulations to you Cecil and too all your friends for having
backup power. Excellent!!! I also have backup power (solar) and all
three of my VHF repeaters are solar powered.

I would be interesting just what percentage of licensed Hams have
backup power systems like you have defined?

Hi,
CW is for HF and HF is for CW. Is it not?
I wonder what the trend is. There are lots of CW trafiic on HF bands.
Unless CW is banned(outlawed), I am on CW 99.9999999% I do have a
microphone too, tho. I can work CW all day, all night but no way with
that dang microphone. My family would try to kill me for disturbing
peace in the house, hi. CW and headphone, noone is disturbed.
CW is music to me, a form of arts, a way to meditate. Listen to a good
fist and enjoy!!!
Have a great week end, 73,
Tony, VE6CGX, Fists #3919

"Disallowing Tech Plus operators HF voice....." - is an example of the "I want it all" mindset! They aren't being disallowd anything they can't earn by applying themselves to learn something further. Learning some more CW isn't like demonstrating the ability to perform unrelated brain surgery. CW is related to communications. Everyone is trying to redefine what the term "related skills" means.

Tech licensees have been successfully upgrading for years without having HF phone priveleges. Why do you think they will stop upgrading now?? The only reason I can think of is the "dumbing down" of America's youth by "allowing" them priveleges without teaching them how to earn them.

And....the only way that "US code requirements are out-of-line with the rest of the world" is that we use a graduated system to establish "incentives" to improve oneself. The "rest of the world" requires CW for amateur licensing - now some of us are proposing to eliminate the requirement. It seems to me that the US would then be the one who is out of step.

The whole CW discussion is only a red herring to justify the avoidance of applying extra effort to gain extra rewards.

Hi All;

I need an LCD display for a Kenwood 7950/7930 any vintage.
This LCD has a small driver board attached.

I'd like to take a VHF-Marine radio and up its Watts. How can I increase the watts of a 25 watt mobile marine radio to say, about 100 Watts or so? What type of amp and antenna do I need. Can I do this in a vehicle or would it have to be at home?

To what end? If you can't see land, and you don't have a sideband
unit, VHF won't do you any good - it is line-of-sight...

Don't give them EVERYTHING! There are LOTS of options, but what is key
is the ability to CONVERSE on phone with hams of all license classes
around the world. Give them a CHANCE to get bitten by the DX phone bug,

and dangle more bandwidth and power in front of them, and they WILL upgrade. Right now, Tech Pluses are CUT OFF from HF phone below 28Mhz, and this is NOT a good way to entice or facilitate encouragement.

It's the seperate Advanced and Extra class I think ought to be eliminated. For instance, I would have proposed something like this:

CLASS	Frequency Allocations	Exam Elements Required
A	All frequencies	1C, 4A + some 4B
B	General & Advanced	1B, 3B + some 4A
C	General, limited to 100w out	1A, 2, 3A + some 3B
D	No code Tech & Tech+ 10m phone	2, 3A

Extras become Class A, Advanced become Class B, Generals become Class C (with power over 100 watts grandfathered for existing licensees), and everyone else becomes Class D. You must pass the revised written elements to get the next higher class of license. Noone but the very few Extras lose ANYTHING, and they only lose exclusive use of very small sub-bands!

- This makes the "advanced" class A truly something special without reserving HUGE portions of bands for only a few.

- It gives Generals access to the large Advanced sub-bands in exchange for a harder written exam.

- It gives Tech Pluses power-limited access to General HF phone & CW bands in exchange for a harder written exam.

- It gives no-code Techs access to 10m phone in exchange for some HF questions. (or maybe not depending on International agreements).

Sure, this isn't perfect, but the details can be worked out. I'd like to see EVERY class of Amateur licensee able to have the thrill of HF phone DX contacts, sampling the full range of operating experiences.

> Tech licensees have been successfully upgrading for years without having
> HF phone priveleges. Why do you think they will stop upgrading now??
>

Read QST... They are NOT upgrading in sufficient numbers to keep this hobby healthy. I'm not talking about "dumbing down". I'm talking about giving someone who demonstrated 5WPM CW proficiency some HF phone beyond the token privileges on the sporadic 10m band. What is the BIG DEAL!

> And....the only way that "US code requirements are out-of-line with the
> rest of the world" is that we use a graduated system to establish
> "incentives" to improve oneself. The "rest of the world" requires CW

>

I wasn't suggesting the elimination of the code. It DOES serve a purpose. However, I am arguing that the current license structure is flawed because it isolates an entire group of hams in the VHF/UHF portion of the spectrum just because they don't want to use CW. Why make people become proficient at the difficult 13WPM level just to use HF phone? This is a hurdle for the sake of a "weeding-out" factor that is totally unnecessary. There will NOT be a huge influx of CB operators if you retain the 5 WPM requirement. If there is a huge influx, it will be made up of people with a genuine desire to progress in radio.

> The whole CW discussion is only a red herring to justify the avoidance
> of applying extra effort to gain extra rewards.
>

Baloney! I worked hard for my General, and I don't like the idea of giving a General ticket to Novice and Tech Plus operators who haven't demonstrated knowlege by passing General written elements. I am suggesting that we ought to open the HF phone "door" to tens of thousands of disenfranchised Tech Pluses out there. Give them a taste of what they are missing, thereby creating incentive instead of RESENTMENT.

Current comment on the ARRL proposal is running 2 to 1 in favor of...
If we don't make alternative suggestions that make sense, you might not like the alternative.

Regards,
- Mike, N9EUZ

I have a rare Precision Model 612 in excellent condition.  This has the
roller with all the specs and works very well.  $175.  73 Chris

Not only would that be illegal, but it would be very dangerous. You
would be more likely to transmit further than you could hear and
inadvertently (or deliberately?) interfere with safety communications.

If you can not be disuaded from illegal use of radio transmitters,
maybe you should consider using the CB bands where there would be
less risk to life and property from your actions. Ask in rec.radio.cb.

Looks like it would put quite a strain on the
BNC connector. Those aren't usually able
to take much anyway.

Subpart E - General Technical Standards

80.215 (g) The carrier power of a ship station radiotelephone transmitters, except portable transmitters, operating in the 156-162 MHZ band must be at least 8 but not more than 25 watts.

Good luck,
Brian/N0iMD

I've volunteered to provide rolling communications for an upcoming 150 mile MS Public Service event, and would appreciate suggestions from those who have experience cycling with radios.

I'm planning to use my th79a with a Mirage B34 PA running off an alarm-system 12V/4AH sealed lead-acid battery. I hope to kludge a gutter-mount antenna onto the metal rack on the back of my bike and get a good-enough ground plane. I assume it will rain, so I'm looking for a light-weight waterproof plastic case to put the HT, PA, and battery in. I'll be listening/talking with a PTT lapel mike/ear bud. I'll be listening a LOT more than I'll be talking, so I calculate a half hour of talk time and 7.5 hours of listening should be well within the 4AH capabilities of the battery.

Anybody have comments on this setup? Any suggestions on a light weight waterproof case roughly 6 x 8 x 12 inches? All comments appreciated!

Hi there :)
I'm an electronic musician seriously looking for old SYNTHESIZERS, KEYBOARDS, drum machines, analog sequencers, vocoders, unusual old effects and all related electronic musical equipment.

In general, I'm looking for working or non-working instruments made in the late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and especially ~PATCHCABLES~:

The more unusual, the better.

I bicycle a lot (century and double century rides) and almost always take my HT with me, mainly to communicate to my wife (also a ham) that I am ok, feeling good, etc. I have often planned on putting together a setup like yours but never got around to it. Let me tell you what I have been using for three years,which works well for me.

I have a TH-22A, the single band version of your TH79. I carry it in my pocket. This keeps if free from shock and vibration problems. I use a telescoping half wave whip antenna attached to the BNC antenna connector. I have a cheap ($1.50) Radio Shack earpiece that I use to listen. When I want to talk I take the radio out of my pocket and talk. (Like you, I don't talk a lot).

My cycling shorts are cloth and the TH22 is sometimes wet (from sweat) when I pull it out of my pocket but in three years I have not had a problem. Most of the time I have the telescoping antenna collapsed and only expand it when necessary. (Those half wave whips work remarkably well when fully extended). Sometimes I carry the alkaline battery pack, but I often get more than 5 hours listen time on the rechargable batteries.

Your setup seems ok except for the power amp business. I would worry about RF exposure with 50 watts and an antenna so close to your body. Also consider the weight of the amp and the 4 AH batteries.

As far as a water-tight case I don't have any experience with it. Out here in Southern Cal it never rains (or so the song says).

73s and enjoy your ride,
Tom

After getting my license and playing on 2m for a while I got sidetracked and have been out of amateur radio for a while. I'm looking to get active again and am looking for some good 6m equipment to use while I study my code.
However I am a college student so my budget isn't that big. If anyone has a good 6m rig or plans to build one that a college student could afford please let me know. 73's.

The answer post by Terry Ryan has a lot of good information.

I would offer a few suggestions that I have worked out while biking and using a radio. Forget the amp. The increase in transmit range wont include an increase in receive range using a poor antenna. You will in effect be able to talk to people you cant hear. You would be much better off to improve the antenna. Much more distance for the buck, and much more time from the battery. I have the following antenna types that are home-brew and work extremely well. I built a rollup jpole that I tape to my flag whip (fiberglass) with incredible performance. I also include a 30' piece of RG8X and light nylon rope to suspend the rollup in the trees at night for greater range. I built a 1/4 wave ground plane that I can take apart to pack away for travel. I fabricated a bracket that can attach to the flag whip or other high object. This seems to work better than the jpole when in a deep canyon. The other antenna I bought because I couldn't come up with a design that worked as well. It is a Comet (I believe) SH95. I use it directly on the radio, or I mount it on my helmet with the following set up. A right angle BNC connector soldered to a ten inch circle of sheet copper, and a short piece of RG8X to connect the two. When I want to use the antenna I duct tape the copper sheet to my helmet. I works very well. I put the radio and gel cell battery in a Military Ammo can bulkhead connectors. It has even been under water (don't ask) with no damage to the radio. It works great except for the weight. I would like to find an Aluminum replacement.

When I studied the charts showing how little db gain resulted from increased power, and how much gain could be realized from improving your antenna, I chose the antenna route for cost / transmission factors. Depending upon the trip and terrain, I occasionally take the amp along for special situations.

Louis

Well,

Congratulations. You've just insured that I'll never do any business with you. As for the products you sell, well - I've done very well with out them so far and you can be assured you've given me even more insentive to avoid them in the future.

Take it to the papers fools

You would be less likely to get into trouble (what you are suggesting is
against the law), and much more effective dollar wise to improve your
antenna. Increasing the height, and using an antenna with more gain
would increase your range both directions. Using an amp would increase
the distance you can transmit (but not as much as you would think)
without increasing the receive range. This could create all kinds op
problems endangering others life and property without you even being
aware of it. Talk with other boaters and Marine Radio Tech's to see how
they are addressing concerns such as yours.

Louis

Just like shooting pool, playing baseball, bowling, etc., you will not impress anybody
in the first three days, but keep at it and before you know it, the other guy will be asking you to slow down...

We have a bunch of secret codes for all of the above.

QRS = slow down

QRL PSE QSY = piss off, the frequency is in use.

You are suffering from a very common disease, seen everywhere in ham radio today in 1998. It is called 'Lack-of-Elmer-Itis'.

I would highly recommend that you find a local ham who is willing to work with you, on one of the HF bands, to increase your skills until you feel comfortable on your own. The one's best qualified usually fall into the 'old buzzards' catagory.

If you can't find one, I'd be more than happy to volunteer to try and help you as much as I can via email. I'm not sure where you are located, but there is also the possiblity that we can hear each on at certain times on 15 meters also.

I need some advice from those who have "been there." Just about 2 weeks ago I took all of the written tests, and all of the code tests, and did as well as I expected, if not as well as I had hoped. Since I had only studied up to the advanced level, I passed everything up to that but failed extra. Then on the code side, I blew 20 wpm, then I blew 13 wpm, but passed 5 with no problem. So, I am now a fresh new Tech plus with a bunch of credits for further categories of license.

So what's the problem? The problem is that since I am limited to just a few CW bands in the HF region, I must perforce use CW. Unfortunately, there seem to be various formats and customs in use that I just don't know about. Also, the quality of CW from the computer speakers is vastly different from what comes out of my radio. I find that I can't seem to copy worth a damn from a live QSO, although I can get most of 13 wpm from the training program (Numorse) on the computer. I find that invariably I spend most of the time the other party is transmitting sitting stupid and thinking, "Why can't I understand this?" In a word, I am getting extremely frustrated with this, and frustration != fun.

The question becomes then, what to do? I will continue to listen to the code practice and try to make more QSOs, but there has got to be some kind of guide to the actual practices of CW and how the contacts run. And of course, other questions arise: How do I quickly tell someone to slow down? How do I break into a transmission to do so? How do you tell someone to piss off who has just broken into your QSO with a bunch of CQs? How many times will most people repeat, before they think "Forget this moron, how did he get licensed in the first place?" Obviously, I have a million of 'em...

I guess I can answer one question myself: the way to copy code better is to use it a lot, right? I listen to groups and generated QSOs on the computer almost every day, then try to make some live contacts. Now granted, I have only been licensed and transmitting for three days, but when does this become fun? I have had more fun studying for the tests than trying to make contact with folks via CW. (I know, a little strange, but I like studying...)

Anyway, I am not one of the no-code folks screaming about learning morse. I have spent the last two months working hard at it, and finding now the disappointing realization that I really am terrible. And it doesn't help that of the HF bands open to novice/tech plus, only two are halfway active. 80 meters is usually very quiet, and 10 meters is dead. I need to pass the higher speed tests to get access to the rest of the HF bands, but with this kind of performance it doesn't look likely. And finally, a recent financial semi-disaster has made more purchases, such as VHF or UHF, unlikely. Hell, I wanted to talk to people in other countries anyway.

What I am not looking for as a response to this message is a bunch of idiots telling me ham radio is dead, or that CW has no justification. I have thought those matters through myself, and don't need any more opinions on them. Such messages will be ignored and trashed, so save yourselves (and me) the effort.

What I am looking for is advice, perhaps a "cyber elmer," if you will. I don't know any hams in the area, and likely won't meet any for a while. For all I know, what I really need is someone to say that it will get better. Everyone needs encouragement...

Thanks for listening. Any helpful replies are appreciated.

Hi, Adam -
I also am a relatively new ham. While I've managed to get my Extra ticket, I'm still rather poor at CW. I passed the 20 wpm test, but am comfortable at 15-18 wpm. Like you, I find the on-air code to be pretty aweful. People don't separate their characters, or they use bizarre rhythms or they 'lose' too many letters while they're sending. There are a lot of ops who run their qso's at 30 wpm and more, and not that many in the speed range I need for practice. Still, I listen a lot, which has two benefits. First, I'm improving my 'ear copy' skills, and second, I pick and choose whose CQ to answer. I don't bother answering someone who can't even send their own callsign cleanly. After

I'm steadier on my feet (ear?) I'll try them, maybe. I'll also
answer a fair number of CQ calls from slower ops, just for fun.
   I'd be glad to make a sked with you. I can stand all the
practice I can get, too. I'm not in a cool DX location, like
someone else who offered to help you <grin>, but I'd be easier
to reach on the average night.

Adam. About the same advice as given by Dan. When you go back on CW, QRS
is the code for slow down. I have (and continue) to use it often. If I
were to think of my first 6 months of contacts, they all probably took a
half hour to 45 minutes and I probably got nothing more out of them than
name, QTH, rig and wx! But it does get better, it does get fun, and before
you know it, you won't even be thinking about it again. I will offer this
word of advice though, limit your cw practice to no more than 20-30 minutes
at a stretch. Personally I think it's better to practice 2 or 3 times a day
at 20 minutes, than once for an hour.
Good luck and I hope to hear you on the bands.

G'Day
For those of you who read my earlier post regarding opening up a European spec IC706 mk2 to full coverage of 6m and 2m, I've now discovered how to do it. The good news is, it's very easy but very fiddly. You'll need a good light and better than average eyesight because the components in there are extremely small.

Thanks to Murray Kelly, VK4AOK, who is a very brave man and took a soldering iron to his 706 in the interests of the advancement of science!

Here's how to do the mod:

1. Put the amount of money the radio cost you firmly out of your mind.

2. Disconnect the power and take the top cover off the radio. There are three screws across the top and two on the sides at the back. Take care with the speaker leads. There is a two part connector in the lead to the speaker which you can separate if it makes things easier. Once you've got the screws out, put them somewhere safe because they're very small and if you drop them you'll never get them out of the pile of your shack rug. The cover may need some persuasion once the screws are out. Be careful not to scratch the case if you're worried about the possible resale value of your radio.

3. Position the front of the radio towards you and look at the PCB. The filter is roughly in the middle of the board and there is a yellow multiconductor cable taped to the top of it. The optional filters are fitted in front of it, or there will be spaces there if no optional filters are fitted.

To the right of the back edge of the filter, about 12mm away, there is an area on the PCB shaped like a backwards letter 'L'. There are two diodes fitted at the foot of the 'L' and positions for five more on the vertical leg. As a further aid to locating this area, it's behind CP3 and R198 both of which are clearly identified.

The US spec 706 has the two diodes fitted at the foot of the 'L', and on the vertical bar it has the two diodes nearest to the foot, then two gaps, and then the top one fitted.

The European spec 706 has the two diodes fitted at the foot of the 'L', and on the vertical bar it has the three diodes nearest to the foot, then one gap, and then the top one fitted.

4. To open up a Euro spec 706, remove the third diode up from the foot of the 'L'. The safest way to do that is to take a small pair of snipe-nosed pliers and carefully crush the diode. It doesn't take much crushing! Be careful to remove all the remains and leave a gap where it was located. Then reassemble the radio, plug in the power, hold down both Up and Down band switches, and switch on. This will reset the CPU so you will lose all your memory contents, but you should now have transmit coverage of 50-54MHz and 144-148MHz. HF band coverage is not affected.

5. In the process of experimenting with his 706 Murray discovered that the second diode up from the foot of the 'L' controls access to the 6m band. If you remove that diode and reset the CPU you will lose 6m coverage altogether. This will be advisable if you wish to import your 706 into countries which do not allow 6m operation, for example Thailand.

A word of caution - the SMD components in the 706 are very, very small and you can very easily do a lot of damage if you mess around in there. Be careful. In fact, be very, very careful! If you break something, don't come complaining to me - all you'll get is sympathy and "I told you so".

Quite frankly, you MUST play the odds! If you intend to take a CW test then, despite the advice others might offer, you HAVE to spend your time listening to the computer generated CW! If you spend your time listening to the same kind of content you will listen to on exam day, you will be better prepared to test. On-air CW has no relation to what is on the test. Listening to on-air in preparation for a test is like studying history to take a french test! Copy computer generated QSO's just like the test you are going to take. Crank up the speed and practice. Stay OFF the air! THEN, when you get your ticket you can get on the air and learn the nuances of on-air CW

Good hunting!

Ken

Ken's right about the on air practice not having much relationship to the
test, but the bottom line is THIS,

Do you intend to operate CW?

If the answer is no, then study your computer generated CW exams and you
should pass the test in a week, you'll already have the answers so it's
really no big deal. Of course passing the 'exam' at 13 wpm has no real

relationship to actual on the air operating so don't expect to drop down to 14.027 and have a QSO, ain't gonna happen.

OTOH, if you intend to acutally operate CW, then LEARN it, Get ON the air!, spend time in the Novice band and start having QSO's yes, you'll fail, you'll miss names, locations, have trouble with QRM but within a few months you'll not only be up to 13 wpm but you'll know HOW to operate CW now when you pass 13 wpm you can actually OPERATE in the General CW portion and not be starting all over again by learning to actually send and recieve on the air. When you take the 13 wpm exam you'll be sipping on your coffee eating a donut while others are sweating trying to fill in the blanks. It's also a lot more fun operating on the air than listening to a monaural computer.

Isn't there a "slow" cw traffic net or a scheduled "slow" cw freq.(apart
from W1AW) I seem to recall reading about it/them. I'm studying as well
and I would like to know if anyone has the info. Bob

I have a rare Precision Model 612 in excellent condition. This has the
 roller with all the specs and works very well. This was rated as the
top
tube tester for a long time. $175. 73 Chris

What we really need is more tolerance of each other. And as one person said, more publicity. Tolerance, as between the "older" classes of license and the new tech class licensees such as myself (2 years) who are getting the feeling that we're unwanted. Something to be tolerated, instead of welcomed. When I was trying to EARN my license, everyone was all for it and cheering me on. Then when I EARNED it, it's like ... "Oh... you're just another no-coder..." I brought a friend into the hobby, and was proud of having done so. But I felt his discomfort as we sat in a radio club meeting and one of the VE's pointed to the two of us and referred to "people like those two" who were entering as tech and not upgrading. Please, don't ever do that to anybody. As much as I respected the VE, I carefully spoke up and told him: 2 Meter FM and packet is what I wanted to do from the start. And it does what I want to do, which is why (aside from finances) I have not pursued upgrades.

New licensees need to respect those who've gone before, and I think that part of this attitude we suffer is a result of the arrogant few on BOTH sides. Likewise, the older members need to realize that techs didn't find their license in a box of Cracker Jax. They had to study the theory and learn it to -EARN- the license by the standardized test that the hobby requires of everyone.

I'm studying code now, but mainly only because I promised my VE's that I would eventually do so. And that locally VHF packet really stinks. Only two sources, and at present both of those are off the air for repairs. And have been for weeks.

Publicity is essential. When I tell people I don't know (and some that I do) that I'm into amateur radio, they are clueless as to what I mean. So we discuss it some while, and it's "Oh, like you mean walkie-talkies and that stuff..." and when you bring up that it requires a federal license to use it, the interest usually drops off -very- fast. So we need to find a "carrot" that makes it more interesting and worth the pursuit. But frankly, I don't know what it is at present.

Hi there :) I'm an electronic musician seriously searching for old SYNTHESIZERS, KEYBOARDS, drum machines, analog sequencers, vocoders, unusual old effects processors and all related electronic musical equipment (MIDI and pre-MIDI)

In general, I'm seeking working or BROKEN instruments made in the

late 1960's, 70's and 80's. Machines with KNOBS, SLIDERS and

especially ~PATCHCABLES~:

The more unusual, the better.

_Moog

_ARP   _sequencer

_EML-400 _Electrocomp _sequencer

_Korg _SQ-10 _analog _sequencer

_Simmons SDS5, 6, 7 Drum Brains
_ANYTHING SIMILAR!!

If youve got any of the above or similar gear which you'd consider selling or
know where i could find some, please email me at rolandman1@aol.com

If you'd like to, please include your phone # since my email has occasionally
been unreliable in the past. I'm also looking for some older literature on
electronic music (magazines, brochures, etc).

Thank you very much for your time and I apologize if this message annoys

anyone.

>
> So what's the problem? The problem is that since I am limited to just a few CW bands in the HF region, I must perforce use CW. Unfortunately, there seem to be various formats and customs in use that I just don't know about. Also, the quality of CW from the computer speakers is vastly different from what comes out of my radio. I find that I can't seem to copy worth a damn from a live QSO, although I can get most of 13 wpm from the training program (Numorse) on the computer. I find that invariably I spend most of the time the other party is transmitting sitting stupid and thinking, "Why can't I understand this?" In a word, I am getting extremely frustrated with this, and frustration != fun.
>
> The question becomes then, what to do? I will continue to listen to the code practice and try to make more QSOs, but there has got to be some kind of guide to the actual practices of CW and how the contacts run. And of course, other questions arise: How do I quickly tell someone to slow down? How do I break into a transmission to do so? How do you tell someone to piss off who has just broken into your QSO with a bunch of CQs? How many times will most people repeat, before they think "Forget this moron, how did he get licensed in the first place?" Obviously, I have a million of 'em...
>
> I guess I can answer one question myself: the way to copy code better is to use it a lot, right? I listen to groups and generated QSOs on the computer almost every day, then try to make some live contacts. Now granted, I have only been licensed and transmitting for three days, but when does this become fun? I have had more fun studying for the tests than trying to make contact with folks via CW. (I know, a little strange, but I like studying...)
>
> Anyway, I am not one of the no-code folks screaming about learning morse. I have spent the last two months working hard at it, and finding now the disappointing realization that I really am terrible. And it doesn't help that of the HF bands open to novice/tech plus, only two are halfway active. 80 meters is usually very quiet, and 10 meters is dead. I need to pass the higher speed tests to get access to the rest of the HF bands, but with this kind of performance it doesn't look likely. And finally, a recent financial semi-disaster has made more purchases, such as VHF or UHF, unlikely. Hell, I wanted to talk to people in other countries anyway.
>
> What I am not looking for as a response to this message is a bunch of idiots telling me ham radio is dead, or that CW has no justification. I have thought those matters through myself, and don't need any more opinions on them. Such messages will be ignored and trashed, so save yourselves (and me) the effort.
>
> What I am looking for is advice, perhaps a "cyber elmer," if you will. I don't know any hams in the area, and likely won't meet any for a while. For all I know, what I really need is someone to say that it will get better. Everyone needs encouragement...
>

> Thanks for listening. Any helpful replies are appreciated.

Adam.....3 days is not very much of a time to do much on the bands...I have seen the bands stay dead for longer than that.

Study the computer code programs to get your speed up as that is about what you will listen to on your test.

Most of all do not get discourged...I flunked the code on my first try as I had never heard a code tape before and that was what the FCC used for thier tests....I have ham friends who took the test a few times before passing, one of who took the test 5 times before he passed

Years back when you appeared before the FCC you took the code first then the written test. you had to pass the code first period and then if you flunked the written test you waited 30 days and tried again. Then if you passed the code and flunked the written....Come back in 30 days and start all over...code then written test...Was a chore !!

Hang in there and you will make it and be real proud of your self for doing it. Its a lot earier now that it was when I got my ticket.

Wish I was near by to help you but look on the internet to see if there are any elmers near you...

Gud Luck W5VWR John Forsythe

Still have some parts left from this radio. Lots of IF transformers, dials, power choke, selectivity switch, spinner weights. Re: the selectivity switch - someone asked for this and did not send the money

so its up for grabs here. If that person contacts me in time,he can
claim it, but if someone comes along and wants it, it will be sold.

Hey guys-

There is a few of us working a SLO-Chat on 15 meters at 21.158 on Sundays at 17:00
and 23:00 UTC. We try to work at abt 8 WPM. Also check the freq at other times
because we try to hang out there at other times.

Ken, what are your code qualifications for asserting your the only one who
knows how to learn to copy code ? Mine are having been a Navy Radioman
back in the 50s and 60s when we still used code. Although a bit rusty now last
time
I was on a code binge I could get down on paper 20 wpm dit for dit all day long.
I could get 25 wpm dit for dit for about 20 minutes until my hand got tired from
writing.
I could not write that fast but I could copy 30 wpm pretty soild in my head.
I say on air code copying is better than computer copying because if you use
a computer and you get used to one tone, one rthym then if it is different at the
test it will take you a bit to get used to it and by then you have missed some of
the
test. Also if you copy code in a noise free environment when someone coughs or
kicks
the table it will distract you. On air code copying with built in noise and even a
TV
in the background will help you to not be distracted.

Looking for a high powered 6m amp in the 500-1000 watt range. Anyone
got anything ? Please email me with what you have and your asking
price.

I have tried to contact Dan's in Montana, but they do not answer phone, fax and no email address. Could anyone tell me where I may buy a single 7MHz crystal? I need one that has pin spacing a wee bit less than 1/4 inch. The socket for it is actually a 3 pin transistor with the spacing mentioned.

many thanks,

Butch KF5DE

No points for being specific Butch, assuming you want a xtal for somewhere
in 40m and not one for exactly 7MHz you can try the following site. The
crystals they have are the small type that will fit your transistor socket.

http://www.fix.net/~jparker/norcal/kits/kits.htm

We're dealing with alot of "what if's" in these situations.

I agree with what RobAZ1 wrote. I don't think it makes any sense to try to talk on a
police frequency. You have no idea what is going on on that frequency. They may
have cleared it for emergency traffic because of a situation across town.

I'm not saying that you shouldn't notify the police. I'm just saying that you should
be prudent on how you do it. Yours may not be the only situation requiring immediate
attention in that city. Additionally, the dispatchers probably could not continue a
discussion on situation, location, suspects and such on that frequency.

In any situation, you should get as much information as you can and summon help in
any way you can (send another to call 911, call from your wireless phone, etc).
Information like license plate #, description of possible suspect, direction of
travel and relay that to the proper department in the best way possible.

Transmitting on a police frequency hinders the departments ability to conduct normal
operations. I would never condone that method.

Guess what? If its an emergency, who cares what the cops/fcc think
about it???
Let them take you before a jury and explain that you used their specific
frequency to call for help in an emergency.
If the jury is informed, they will laugh in the face of those seeking to
bring charges against you.
REMEMBER: JURY NULLIFICATION is where the jury overrides the law and
says that in this instance, the law should be ignored.
Jury Nullification are the only words a quality jury needs to know in a
case like this. And, when an attorney, prior to being assigned to a
jury, asks you a few questions, the first two words out of your mouth
should be "Jury Nullification". He will throw you out of the building
because those are words you are not supposed to know. Those words give
you tremendous power over the case being heard. No matter what the law
says, in a state where J.N. is legal, you have the right to ignore what
the judge says, and inform the court that the jury has come to the
conclusion that, in this instance, the law should be ignored via J.N.
Boy, you will upset the control phreaks in the court because you are so
smart!

God gave us a brain and a set of rules to operate by, the FCC gave us a license
and a
set of rules to operate by. You transmit out of band with your rig it better be
an
emergency.

He should then get more current on the rules. The FCC has ruled,
that the line about using any frequency at your disposal means any HAM
frequency. Anything in part 97. IE a Novice can use a Generals
frequency.

<35DFC73D.689C@ix.netcom.com>...
>> 3.  As for anyone using a police radio's, all states have some form
of laws
>> that makes it a violation, but, he also says they have exceptions.
Such
>> exceptions are: if directed by a police officer or if the officer
is
>> incapacitated.  This means (to answer one post) if you come across
an officer
>> that is down and you use the radio to call for help, it's not a
violation to do
>> so.

Because all of this is so jurisdiction dependent, the whole debate
really makes no sense.  People keep saying, "Use a cellphone."  What
if you're in some part of the country (the vast majority of the U.S.
land mass as of this time) where there is NO CELLULAR SERVICE?  What
good does that advice do you then?  In sparsely populated areas, there
aren't many hams on VHF or above, no repeaters, etc.  Maybe you could
call another ham three states away on your 40 meter mobile in that
case, but is it practical?

Again, if you just carry around a modified ham radio or a regular
commercial radio that can transmit where you're not licensed, you run
a grave risk of mistakenly declaring an "emergency" and using your
fancy toy when the need really is not there.  There is no legitimate
reason to carry a transceiver, except in areas where you have an
interest in monitoring local activity and they use communication
systems that aren't yet available on commercial scanners.  If the only
way to hear digitally transmitted (not encrypted) public safety
traffic is to have a radio like they're using, then there's nothing
wrong with buying one if you can afford it.  But you shouldn't be
looking for an excuse to talk on it!

If you can afford a fancy two-way, you can afford a more conventional
and lawful means of summoning help.  As long as the police aren't the
only occupants of any radio spectrum where you happen to be, there
should be no justification for using their frequencies.  And most of
the U.S. is equipped with pay phones.

>> 5. The reason police departments can confiscate radios used to
transmit on a
>> police frequency is because "It's probably been modified and thus
is illegal,
>> or if it's a standard UHF that can be programmed, they don't have
```

the right to
>> transmit on police freqencies"

If the police confiscate a radio just because it doesn't meet FCC specifications, they are acting beyond their authority. They should refer such matters to the FCC and/or DOJ for enforcement. Those agencies have jurisdiction over radio regulations; the local cops don't.

>Don't misunderstand what my opinion is: I don't think people should
>carry two-way radios and go out on "crime patrol" to report suspicious
>activity to their local police, but there are, at times, situations
>where someone with a radio could SAVE A LIFE.

Exactly right. The "proper" definition of such a situation depends totally on where you are and what resources are available to you AT THAT MOMENT. If you PLAN to use a police radio to report any emergency you happen to feel justifies it, NO SITUATION will in fact justify such a transmission because you will not have taken the reasonable precaution (reasonable because you are planning in advance anyway) to provide yourself with suitable lawful means of reporting emergencies.

>Being a "late-nighter" I've run into some very unusual situations where
>I felt the police should be notified. I used a cell phone.
>
>But, if I had a two way radio, and saw a rape, armed robbery, or
>shooting in progress, I would use that radio to summon help. If my

If you also had the cell phone with you, the officer could legitimately ask why you were unable to reach 9-1-1 on it. If he can pick it up and place a call to 9-1-1 on it himself, you're busted.

>Could you see the look on the Jury's face? "This man used a radio to
>save a life and now we must prosecute him."

Now you're getting into the concept of "jury nullification". You'd better hope the members of your jury are informed enough to know that they can judge the law as well as the offense. They are not likely to be instructed of that right by the judge, and he/she will probably block any attempt by your attorney to even mention it to them. The jury will be told not to use "common sense" but strictly the facts of the case and the words of whatever statute is being enforced against you. If they're like most jurors, they will do exactly that and convict you.

Hi folks :) I'm an electronic musician *seriously* looking for the following musical equipment, in any condition, even broken:

-OLD SYNTHESIZERS from the 60's-80's   Moog, ARP, Oberheim, etc

-OLD KEYBOARDS w/ knobs or sliders   Roland, Korg, Sequential, etc

-OLD DRUM MACHINES w/ terribly electronic sounds :)

-OLD SEQUENCERs w/ knobs for each step

-OLD VOCODERs for that "robot-voice" sound

-MODULAR PATCHABLE SYNTHESIZER GEAR, complete systems or individual modules - "Switched on Bach Moog", ARP 2600, Paia, anything similar.

-RACK SYNTHS, INTERESTING EFFECTS and anything related to the above.

-Moog, ARP, Korg, Roland, Sequential Circuits, Oberheim, Yamaha, EML, Electrocomp, EMS, Synthi, Putney (VCS3), RSF, Buchla, Serge, Polyfusion, Ionic, Paia, SMS, Wavemaker, E-mu, Steiner-Parker, Chroma, Aries, etc.

-Roland TB-303 Bassline

-Roland TR-909 Drum Machine

-Roland TR-808 Drum Machine
-Roland TR-606 Drumatix
-Roland CompuRhythm

-Simmons SDS-7 + SDS-5 + SDS-6 Drum Brains and Sequencer

-Pearl SY-1 Syncussion

-E-mu SP-1200 Sampler Drum Machine
-Sequential Studio 440 Sampling Drum Machine

-Sequential Prophet VS rack
-Oberheim Xpander
-ARP 2600
-Korg MS-20/50

If you have any of the above OR SIMILAR for sale or know someone who might, please email me at rolandman1@aol.com

and include phone number as well if you'd like.

I'm also looking for old literature on electronic music as well: product brochures, books, old magazines, etc.

Thanks in advance and apologies if this post annoys anyone.

Looking for an iambic keyer paddle such as a Bencher, Ham Key, Brown
Bros. etc. Physical condition not all that important as long as it
works well and is reasonably priced. Please email me with what you
have and your asking price.

Can anyone tell me if there are more ham shops to go to or is it best
to do mail order, and if so which mail order is better?
I have been going to the Amateur Raido Toy Store, in Wheaton, and it is
a good store but that is the only place that I know that sells decent
ham equipment.

Hi All,

I have just spent over an hour making at least a half dozen calls across the country. You'd think that in that amount of time i'd be able to find a company willing to sell me the VPL-1D programming kit for the FTH series portables and the VXR series repeaters. Most of the companies that I spoke with said that they can sell this kit to adresses in their own state or export only. I have been unable to speak with the Yaesu rep. that covers Utah(based in Denver, go figure?).

I have 12 of the FTH-2009 radios and I need the programming cable and software. Anybody have pinouots for the cable? Can anybody help me out?

After today, I am of the belief that Yaesu software is harder to obtain than Motorola RSS.

Thanks in advance!!

Dan Dialogue

Bullshit. It is NOT all mode. It does not include the hard to find
module which is required to work FM.

So? If the FCC says it's illegal, it is.

No, I believe he meant any AMATEUR frequency. From what I've read of the rules, it is not good at all to transmit on non-amateur bands, REGARDLESS of whether or not it is illegal.

Oh really ? I guess Icom errored when they printed the box and manuals
then, huh ? Because by god, they BOTH say ALL MODE !
Next time why don't you try posting your replies with a VALID email
address instead of some phony one. What a wimp !

[repost -- my original post seems to have disappeared into the proverbial
bit-bucket]

After an hiatus while I enhanced the technical details of my web site,
I am back to reviewing a backlog of books :-)

Please check out my latest review, and if you know of any good similar
or related books, please drop me a note on while you are on my web site :-)

My new review:

URL: http://www.weyrich.com/book_reviews/managing_12.html

TITLE: Managing 12 Volts: How to Upgrade, Operate and Troubleshoot
12 Volt Systems

ABSTRACT: A handy little book which covers all aspects of the use of
12 volt lead-acid batteries in emergency and recreational
settings. Of particular interest is the advice on the use
of solar cells to charge lead-acid batteries.

INDEX: electronics, survival

KEYWORDS: emergency power, lead-acid, 12 volt, solar cells, camping,
battery backup, recreational vehicles, RV, boats, marine,
charging, care, use, using batteries, power inverters,
capacity, voltage, current, storage, deep-cycle, gel-cell,
alternators, generators, regulators, wind power, wiring,
troubleshooting

Regards,

orville.

I have a Yeasu Ft707 10-80m 100 watt mobile rig with the FRB 707 amp relay
box
and ft 707dm memory unit
radio has clean face about a 9 case is about a 7. 707dm is about a 8 as well
relay box is mint.
$335 for set

What question ? Nobody asked a question. But yes, the rig will "work"
FM (not DO FM) with the optional module JUST like stated in the items
description on eBay if that's what your refering to.
You ex cb'ers need to learn the "ham" language and get out of the CB
age. I see your as big a wimp as the other guy with the phony email
address.

Tim, take the chip off your shoulder and ignore these stupid comments.
We are smart enough to know that these "snipers" are just looking to get
your goat.

We don't need "road rage" in the newsgroups.

Actually, "Real" hams do go to hamfests to find cheap parts to use for BUILDING projects. Hams that sit home and work contests are known as "appliance operators".......

I got a better followup:

"REAL hams don't use FM!"

Ah, I'm just joking by the way. Anyway, why all the fuss over a 6 meter rig?

g'day,
     i am trying to make a repeater... i was just wondering if anyone had
any ideas for a home made controller, or even a circuit to just provide
a delay (tail) after the recieve signal dies, to keep the transmit radio
keyed up for a few seconds.... i would like a beep, but it is not
necessary for the moment... also, i'm looking for information about
diplexers/duplexers... what is the difference? i have a diplexer, and
would like to know if it will allow tx and rx on the same antennae at
the same time? also info on tuning the diplexer... it has tuning lugs at
the end... all info appreciated. thanks in advance,
                                 Aaron

Aaron@majestic.net.au

I have a Urei 809 with a broken woofer basket...
(believe me - you don't want to know what happenned!)

I am looking to buy either just the woofer basket from the 803 driver,
or if the price is right, I'll buy the entire driver.

Thanks!

Duke Stratton

item #27642396. late WE [s/n 46xxx] with RE pto subchassis--a crossover model i reckon. this radio has .8 and 2.4 filters, not a scratch or chip in the front panel, one paint chip on the rack adapter, a little shelf dust on the chassis is all, the knobs paint isn't chipped, the knob inserts do need polishing, and the power cord's a bit dirty but still has the original little green tag. probably a CCA 9 or better, but i'm not sure i fully understand the cca rating system so i've tried to give a comnplete descriptiuon.

Boonton 230A, has Boonton 230A front panel and says H-P 230A inside, tunable 10-500 MHz amplifier with 3-2C39's, clean, interior silverplated, gave 10 dB gain at 440 MHz last time used, has a bunch of stickers and markings on it [got it from the employee sale where I

worked], should clean up nice, rack mount, about 7" high, about 20
lbs, buyer pays shipping, best offer by 9/9/98.

I have a Bug that I would like to sell or trade, but have no idea of price. It's chrome and has a wide base on it. Serial number is 213677. I has a triangular shaped fulcrum and the speed setting bar has numbers on it wiht the weight there too. All parts are on it and it's in really good shape. On a scale of 10 (new) it's at least an 8.

I would be grateful if someone could suggest a replacement for the antenna ,
which comes with the FT50R . I would be grateful for your comments on it ,
source from which to buy it and possible price .

Yours sincerely ,

This is a 220mhz ht in good but used condition, have ac adapter and
operating manual, selling because of not much activity here on 220mhz,
asking $135.00 + $5.00 for the UPS shipping. email me with any questions.

The Comet SMA-503 is a much better performer than the stock antenna. It is
available at Ham Radio Outlets nationally.

That ugly antenna that comes with the FT-50R isn't as horrible, say, as the stock VX-1R antenna...but the Comet SMA-503 is a better performer. You can use it, of course, on both your VX-1R and your FT-50.

Compair the Comet and Diamond, I believe the comet will not receive the AM
Broadcast band as the Diamond will reveive it great.

Circumstances force me to offer for sale my pristine 51S1F, very late
WE s/n 46XX with RE PTO subchassis, apparently a crossover model.
Works good.  Not a scratch or chip in the front panel.  The only
defects are a chip in the paint on the rack adapter and a dirty line
cord, which still has the little green tag attached.

$1400 o/b/o, buyer pays shipping.

i have for sale an ASTRON RS-70M power supply.
it does about 57 amps continuious.
in great shape.

asking $235.00

also I have for sale a IBM Model P350.
it's contents are as listed: 3.2 gig hard drive, 64 mb EDO ram, S3 video,
18X cdrom, 3.5 floppy, 1serial, 1 parallel, 2 USB ports, Mouse, keyboard,
Manuals, software, just about 1 yr old. it's in mint shape cosmetically, and
runs like the day it was built by IBM, (sorry monitor not included)

$650.00
please reply via email, TNX

I am considering buying an Icom IC-706 or 706mkII. Since my favorite mode is CW I would like to hear comments from anyone on how well this rig performs on cw. How is Icom's optional CW filters in this rig? Good S/N ratio ? I need something more portable to drag back and forth from my cabin and since I am currently lugging seperate rigs for HF, 6 and 2 meters the 706 would better fit my bill. Any comments at all would be welcome please.

Tim-

I cannot give you a fair reveiew on CW, as I do very little CW work. The IC-706 is an excellent rig though for all-around work. The MKII model has anumber of enhancements over the original model, and the current incentives from Icom make it almost a no-brainer as to which model to choose.

Portable, the 706 is very compact, rugged and a good performer on SSB and FM. The menu system does take some getting used to, but it grows on you. I have used mine now for several years, and have just bough tthe matching AT-180 for it. The separation kit is almost a must for mobile use if you are going to actually mount it. I use a Timewave DSP-9+ on SSB and don't miss the filters at all.

I would choose the IC-706 over and over again, but I have to admit I would have waited for the MkII if I had known it was coming.

Go buy one. You'll be hard pressed to find so many features in a small box like this.

It's ok. I have used one at a field day that had a cw filter. It was
pretty tight. But I wasn't overly impressed with the overall audio
quality of the rig. Seems to maybe have a tad to much rf gain on the low
bands. But I imagine this is due to catering to the mobile ops. It
wasn't distorted or anything just kinda flat sounding. But heck, what
can you expect from such a small radio, and also I'm spoiled on my 830
and other rigs. Good sensitivity on the high bands. Overall I'd say it's
ok. Reliable with a decent track record. And small. I use a old IC 730
in my car, and has been a very reliable radio over the years. MK

It's OK. I have worked a few of them. Thought it sounds kinda of mushy above 35 wpm when in QSK mode. Like it's chopping some of the dashes or something. Don't know how well it RX's. Can only tell you what it sounds like over the air since I don't have one.

I can say, the faster you send, the better your signal must sound due to static and QRM. It's takes too much effort to guess what your trying to say... Best CW still comes from older rigs with a manual PTCW switch.

Hi folks :) I'm an electronic musician *seriously* looking for the following musical equipment, in any condition, even broken:

-OLD SYNTHESIZERS from the 60's-80's   Moog, ARP, Oberheim, etc

-OLD KEYBOARDS w/ knobs or sliders   Roland, Korg, Sequential, etc

-OLD DRUM MACHINES w/ terribly electronic sounds :)

-OLD SEQUENCERs w/ knobs for each step

-OLD VOCODERs for that "robot-voice" sound

-MODULAR PATCHABLE SYNTHESIZER GEAR, complete systems or individual modules - "Switched on Bach Moog", ARP 2600, Paia, anything similar.

-RACK SYNTHS, INTERESTING EFFECTS and anything related to the above.

-Moog, ARP, Korg, Roland, Sequential Circuits, Oberheim, Yamaha, EML, Electrocomp, EMS, Synthi, Putney (VCS3), RSF, Buchla, Serge, Polyfusion, Ionic, Paia, SMS, Wavemaker, E-mu, Steiner-Parker, Chroma, Aries, etc.

-Roland TB-303 Bassline

-Roland TR-909 Drum Machine

-Roland TR-808 Drum Machine
-Roland TR-606 Drumatix

-Simmons SDS-7 + SDS-5 + SDS-6 Drum Brains and Sequencer

-Pearl SY-1 Syncussion

-E-mu SP-1200 Sampler Drum Machine

-Sequential Prophet VS rack
-Oberheim Xpander

-ARP 2600
-Korg MS-20/50

If you have any of the above OR SIMILAR for sale or know someone who might, please email me at rolandman1@aol.com

and include phone number as well if you'd like.

Thanks in advance and apologies if this post annoys anyone.

Well I've got an Icom IC-706MKII in my '86 Chevy S-10 pickup.
It's mounted in the space below the AMFM/cassette player.
Don't run mobile CW with it as I only use it for SSB & sometimes FM.

It also makes a great SWL reciever

Antenna is a Bugcatcher. Don't use any kind of antenna tuner.

Own the countersurveilance combo that the pros use!

This combo contains the world renowned wideband receiver, Icom R-10. This is
the full frequency European unit that has no gaps. I have ad these two for
about two months and must sell to pay bills...

I am new to the Nashville area and am looking to get either a 2m or 440 rig
or maybe even a dual band if there is enough traffic up here.
Are there any clubs or groups up here to help get me going?
Thanks,
Alex

I have a variety of test gear in good condition.
Eico 955 Capacitance checker.  Excellent   $40
Courier Port-a-Lab 500.  SWR, Power and Modulation Excellent $75
Eico 495 Scope Voltage Calibrator.  Excellent  $30
Eico 488 Scope Electronic Switch for two traces. Excellent $30
Eico 950B Resistance-Capacitance Comparator Bridge. Good $40
```

```
          All units plus shipping.
                                        Thank You, 73 Chris

Hi Vic,

The difference is the cable diameter, capacitance per foot, cross sec mil area of the center conductor, velocity factor, the per cent of sheilding and the dielectric constant of the insulating material.

RG numbers were numbers first used circa WWII for military applications and specifications.

RG8 is 50 to 52 ohm cable but the suffix letter U, AU,BU is roughly 1/2" diameter where as RG8X is 1/4" diameter .

Both have their places. But if you preference is for quality, stay away from RG8X when feeding multi-band antennas.

73

Rich

W9JUC

Why do you say that? 8X certainly doesn't have the low loss of 8/U, or the power-handling capability, but I can't see why it would *otherwise* perform any differently.

Seems to me that most people consider 8X as an alternative to 58/U, not to 8/U (though I could be wrong), mainly because of the diameter.

```

Hi folks :) I'm an electronic musician *seriously* looking for the following electronic musical equipment, in any shape, even broken:

-OLD SYNTHESIZERS from the 60's-80's   Moog, ARP, Oberheim, etc

-OLD KEYBOARDS w/ knobs or sliders   Roland, Korg, Sequential, etc

-OLD DRUM MACHINES w/ terribly electronic sounds :)

-OLD SEQUENCERs w/ knobs for each step

-OLD VOCODERs for that "robot-voice" sound

-***MODULAR PATCHABLE SYNTHESIZER GEAR, complete systems or individual modules - "Switched on Bach Moog", ARP 2600, Paia, anything similar.

-RACK SYNTHS, INTERESTING EFFECTS and anything related to the above.

-Moog, ARP, Korg, Roland, Sequential Circuits, Oberheim, Yamaha, EML, Electrocomp, EMS, Synthi, Putney (VCS3), RSF, Buchla, Serge, Polyfusion, Ionic, Paia, SMS, Wavemaker, E-mu, Steiner-Parker, Chroma, Aries, etc.

-Roland TB-303 Bassline

-Roland TR-909 Drum Machine

-Roland TR-808 Drum Machine

-Simmons SDS-7 + SDS-5 + SDS-6 Drum Brains and Sequencer

-Pearl SY-1 Syncussion

-E-mu SP-1200 Sampler Drum Machine

-Sequential Prophet VS rack
-Oberheim Xpander
-ARP 2600
-Korg MS-20/50
-Oscar with MIDI
-Pollard Syndrum
-Gleeman Pentaphonic

If you have any of the above OR SIMILAR for sale or know someone who might, please email me at rolandman1@aol.com

and include phone number as well if you'd like.

Thanks in advance and apologies if this post annoys anyone.

Never heard much of value on cw either example: your rst is, qth is, name hr
is, wx is, the rig here is, etc. All repetitive boring stuff.

If you can only do 5 wpm that is about all you will be able to do within
a normal time span. Most people that REALLY run cw go fast enough to
have a fairly normal conversation. Besides not much different on fone.
Yer loud here, yep, here too, boy it sure is hot, yep, here too, hey you
still on yer old rice box? yep, how bout you?, yep, same here, etc,ad
nausium...MK

I failed the General test because of CW twice. I finally got it. That was back in 1959. I still enjoy CW and use it. If I can learn it, anyone can.

Mod is interesting:

Removing the 3 diodes left on board allows full MARS/CAP mod, but further deletes 800MHz receive. There has to be a combination of those seven diodes to receive normal or full 800MHz and maybe return cell receive. Additionally, the mod(removal of all diodes), while switching through bands allows for a TV band, channels relating to standard transmission. It can be scanned or searched as with freqs. ANYONE know which diodes need to be left on for full 800MHz RX and not cutting out after 809-849 & 859-894, which have been removed.

eric_fre@my-dejanews.com wrote:
>
> Well at last guys I have sat down to work it out its just a matter of removing all of the possible 7 programming diodes sounds simple well its not read on.
>
> Well every one this is a really scary mod to do to the Q7. It is really not for the faint hearted or any one that doesn�t have a soldering iron tip less than 0.9mm. I take no responsibility for these mods and am warning you that it does void warranty! It is extremely easy do destroy something so be CAREFUL !!!! This is only a description of what I found. Use this information at you own risk! OK now!

I must admit that there is much redundancey on CW, but if you look around, especially on the lower freqs., you can find some OT's, and me for that matter, having some good conversation.

I like to tell the story about when I took the General test a couple of months ago. This old fart (I use the term with affection...he's a friend) about 85 years old came in to sit through the 20 wpm and 13 wpm while waiting for his 5 wpm test. While I stuggled through the 13 wpm he copied 100% perfect copy. He was pissed because now he has to study for the general written...

Well here my $ 0.02 worth, It took me 2 years to pass the 20 wpm for extra
class. The only reasoned I stuck with it is because I have a $ 1500.00 radio
setting on my desk and I wonted to be able to use all of the band and not
just a little proton. I think if we don't do something to bring more
interest to our hobby we are going to lose more bands. Look at the internet,
You can communicate with any one in the world and don't have to take any
test

ok, this one got me... cat 1000 comes in the mail. cost mega bucks, BIG
dollars. but no software!!! it's extra! what a surprise, indeed. for that
money you would think they'd offer up software with it. disappointing.
anyone have a copy to save me a few hours? would appreciate it and could
offer trades for your trouble.
thanks in advance!
Randy

Well, that last statement is a bit of an exaggeration OM, but it may one day get to that point. On the other hand, what is the challenge in that? I thought part of the hobby was the way it challenges you to learn new things and push yourself (I guess you didn't enjoy getting up to 20 wpm at all and feel no pride in having accomplished it) both in terms of technical ability and operating skill. When you can get a ham license for just sending in a few boxtops from the cereal box, that's when ham radio will be really dead.

>There is a vast difference between amateur and commercial radio.The
commercial has to keep the budget down,and this they can do by doing
away with radio operators and replacing them with a bridge/hand held
phone through satellites.The 'self training'aspect does not come in to
it with them,we do not have ready access to satellites,and if we did,it
would be the same as having a telephone in our shacks.I fail to see how
any one can try making comparisons between amateur and commercial
radio.They are worlds apart.Also,if a satellite goes down,then that is
that,there is no way you can do a 'make and mend' repair.Anyone saying
that morse does not have any use in this world of ours does not have the
first understanding of morse/cw.Please do not make senseless remarks to
justify the fact that those who cannot make the necessary standard will
not try harder,but will try all means to drag the standard down to their
own level.Morse does get through when other 'easy methods'will not..

When I first got my ticket - I thought there was no use for CW either. Then 10mtrs closed and it was all that was left. I sat and listened to 40mtrs - learned cw and started to enjoy it. Now can send and recieve over 30wpm by hand.   Once you learn it you will enjoy it. Or at least that's the way it worked here.

The first local oscillator crystal in your pager was carefully specified
to be stable to 2ppm for all causes over a limited temperature band and
for 1 year this equates to 2kHz at 1 GHZ ie just OK.
A TCXO should be better than this. If your synthesiser reference was a
TCXO it should be typically OK for 1kHZ at 1 GHZ.
Just so happens that I purchased a batch of state of the art surplus SC
cut OCXOs (16.384MHZ for synthesiser reference use)) that are good to
0.1ppm / year for all causes their list price is $500 I have them for
sale at $90 email me if you want a more detailed spec.

That's how it happened to me. Once I took the 15-20 min a day to really learn
it, I really enjoyed it. My radio doesn't even have a voice mode.

I'm not sure what software you should have received, since we are using the CAT 300 DX which had none and needed none. Perhaps you're referring to the "Programming under Windows" software, which we don't use. All our programming was done with TT phones, one button at a time!

On the other hand I did try an approach they sort of mentioned, but not really with enthusiasm. (Good reason too, they didn't know enough about it to push it.) They sold me an RS 232 interface, and I provided the modem at the repeater site. The idea being to program the controller remotely from a computer, and of course then you do need their software. I bought the software for the CAT 300 DX, and have it now. But after going thru all this, I found their real intent was to have me take a laptop computer to the repeater site, and download directly thru the RS 232 interface. The idea of using a modem and doing it remotely was sort of an off the wall suggestion they made. It took me hours and hours to finally get it to work, which I did. They really had no interest in helping me either, were so disinterested they offered to give me the money back on the interface and quietly go away. Not a happy parting.

Good luck,

Olin McDaniel, W4PFZ

Gotta tell you Dads' out there, the Novice Ticket makes a wonderfull father and son/daughter project. Try it. Don't get discouraged because the kids just "soak up" the code like a spong and you have to work at it. Thats just the way it is. Kids have NO problem kicking your behind on code. The theory portion will put you back on equal ground for a while. :o) A short while only though!

Holding the chip so that the pins point toward your right-hand side, the pins are number from top to bottomfollows:

TDA2003 10W Audio Amplifier

```
_____________
|        |                |--------   pin 5 Supply voltage(8-18vdc)
|        |                |--------- pin 4 Output
|   O  |                |--------  pin 3  Ground  (This pin is also
connected to the metal tab.)
|        |                |--------- pin 2 Inverting input
|____|________|--------  pin 1 Non inverting input
```

Hope this helps Alexander.

I agree and I remember that the late senator goldwater had two fantastic
base set-ups and pushed for code to remain but when he sat at his radios
he would use modems and computer 90% of the time.
All the code/cw amateurs that want code/cw to be part of testing and
operation need to wake up as do the no code/cw amateurs code needs to go
and proper manners need to be improved, We all need to help the
manufactures to promote amateur radio and get more of the public
interested and involved in amateur radio not to increase sales but to
keep the frequencies we have and to keep amateur radio ALIVE.
Come on now people amateurs/ham's men and women and teens lets get the
band wagon going and keep our hobby/passion alive and well and we need
to police our air-ways and help the fcc to get rid of the abusers the
foul language and dead carriers the trouble makers the one's that give
amateur radio a bad name off the air.
SAVE Amateur Radio promote it work to make it grow, work to make it Live
for another hundred years or longer and as for me I have been getting my
children hooked on amateur radio and hope the carry it on after Im gone.

Now, thats a earfull! Have you ever tried contacting the fcc to get rid of illegal op's? If you have you will know that it doesn't work. If we hear a illegal station, would would you suggest we do? We have had problems on the local repeaters here and have called the fcc until we are purple in the face and little gets done. After about 5 years of bugging them, they finally showed up. They got after one guy that a local had nabbed live and in color sitting in his car. Not a whole lot really happened, and all the worst offenders remain trashing the repeaters. What would you suggest we do about foul language if the fcc refuses to file because of first ammendmant rights? Dead carriers? I outcarrier them... I've found the fcc to be fairly useless as far as enforcement. Not their fault, they don't have the funds /man/woman power. I can think of a real good way to get the goofballs off the radio, but it pretty much entails me beating the crap out of them. Then, I will probably be the one in legal trouble. I can tell by your statements you don't have too much experiance dealing with the fcc. Also no way to self police if we can't make a legal radio citizens arrest. In other words, we can't do it with the present system. MK

Yep, thats because they lack the negative mindset to learning code. It's
all in the brain. If you think you will hate code, you will. MK

Not quite. Particularly between the ages of 6-11, children have the ability to acquire languages and communications methods at rates far exceeding those of adults. Making the assertion that a "negative mindset" is the culprit may be emotionally satisfying if you have a pro-Morse test agenda to promote, but ignores a lot of physiological mechanisms behind how people learn.

Its amazing how we always want to lower our standards so that people can join the ranks. Why don't we just do away with things like algebra or english lit. in our schools, that way everyone could get their degree. I mean I have really never had much use for the 3 years of algebra that I took. My current career doesn't make use of it. English lit., well, that speaks for itself. The fact is that people just don't want to work at anything these days. They want it all for the minimum amount of effort. Sure you say the manufactures need more people to feed their market, or people with dyslexia are handicapped, but 20 years ago this wasn't even a big issue. Frankly, excuses are like asshole, everybody has one! We gave an inch with the no code and now they want a mile! I urge everyone to speak up, not only to the ARRL, but to your congressmen and senators. We worked hard for our HF privileges and now we are letting them slip away to anyone who wants them.

We welcome new people to the hobby, it is the only way to keep it alive. We understand the process of learning code can be intimidating but it is not impossible for anyone. Some of you guys wanting to drop the code should be ashamed of yourselves! What kind of example are we setting for or children when we present an example that lowering standards is okay to accommodate slow learners. Being a slow learner doesn't mean someone can't learn it just means it may take 2 weeks instead of 1 to learn the code. Should we do the same for our academic standards in our high schools and universities?

If we loose it then we are all to blame. The OT's that let it slip away, and the newcomers that worked to take it away.

Years ago, I paid $3000 for a 4.7MHz PC with only floppy drives. My friend just paid $1000 for a 200MHz Pentium PC laptop with 2G hard drive and CD ROM drive. Should I be jealous of him? Times change. Why should he pay as much as I did. Your HF privileges are not "slipping away" anymore than my PC above slipped away when my friend bought a better machine for less. Do you feel the same way about people who win the lottery? You don't have any less money even though they got something for almost nothing.

Nope, but then professional endeavors and amateur hobbies have never had much in common.

Neither have the price of technology, lotteries and code requirements.

> I'm not talking about lossing HF privliges and I appologize for wording it to
> give that impression.

What I am speaking about is that small barrier that separates people who have the self discipline enough to jump a hurdle instead of crawling under it. It sets a standard that invites the type of individual who doesn't require much policing. Someone who has worked for a privilege and wants to take care of it. Granted, amateur radio is not void of some huge problems. I hear a lot of racist crap on the low bands, jamming, obscenities etc. but for the most part the amateur bands are in fair shape (I only operate HF, so I can't in include 50+mhz in that statement). I have noticed that most of the rise in the amateur problems have increased over the past 10-15 years. I'm not sure what that means. Maybe someone can come up with an explanation.

If it were up to me, I would do away with any technical knowledge required for a license. In this day of plug and play technology who needs to know how a transistor works or how to plot a smith chart. The written is equally as difficult for me as the code is to some people. Is that next? Will it come to the point that all one has to do is send in an application for a call sign?

```
73
Brent Scott, N5CLK

P.S. can anyone tell me why when I look for my old call sign on call sign
databases it doesn't come up with a cross reference to my new call?

I think the telepaths must use radio to confirm the telepathic contact, and then finally need to send a post-card to get things in writing ;-)

> Although with that fairly rare GM4 call, you needn't
> resort to telepathy (?)

I wasn't aware of any shortage, there seems to be several fairly active ones around here, up to just about everything from 80m ragchewing to moonbounce.

Cheers
David GM4ZNX

I understand. I suppose it must be due to a 50-50 mixture of poor manners and desperation. If you'd been calling another European country, I think you'd have had similar calls from G stations. At least by making an unambiguous call you've not contributed to any confusion, and I can't see how anyone could criticise you without it showing that they think that you doing your hobby must be for THEIR benefit. Perhaps they'd have been happier if you'd just called CQ DX and left them guessing what calls you would answer?

Thanks,
David GM4ZNX

Hello there :) I'm an electronic musician looking for old SYNTHESIZERS, KEYBOARDS, drum machines, analog sequencers, vocoders, unusual old effects and all related electronic musical equipment.

In general, I'm looking for working or non-working instruments made in the late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and especially ~PATCHCABLES~:

The more unusual, the better.

_Moog

_ARP

_Roland

_Buchla

_Serge

_Korg

_EML (electrocomp)

_Polyfusion

_EMS (synthi and vcs-3 putney)

_RSF

_Oberheim

_Sequential

_Steiner Parker

_Aries

_Synton

_E-mu

_Electro-Harmonix

_Ionic

_OSCar monosynth

_Roland   _TB-303 Computer-Controlled *Bassline

_Roland   _TR-909 Rhythm_Composer

_Roland   _TR-808 "   "

_Pearl Syncussion SY-1

_ARP   _sequencer

_EML-400 _Electrocomp _sequencer

_Korg _SQ-10 _analog _sequencer

_Simmons SDS5, 6, 7 Drum Brains
_Oberheim Xpander
_Sequential Studio 440
_Prophet VS rack

If you have any of the above or similar equipment which you'd like to sell,

or know where i could find some, please email me at rolandman1@aol.com

If you'd like to, please include your phone # since my email has occasionally

been unreliable in the past.

Thank you very much for your time and I apologize in advance if this posting
bothers anybody.

I used to find that GW4RGA was very popular, but that was
back in 1982/3.

I am planning on sailing to south pacific for live-long dx pedition.
I do not plan on comming back. Instead I want to do like Danny Greene
did in the 50's and 60's on his yacht "Yasmi".

Am I correct in thinking that Hams might want to fly out to where I am
and crew on the next let....and of course operate /MM and at the next dx
spot?

Any suggestions as to which spots to 'put on the air ' first.

Susan Meckley W7KFI/MM2   S.V. Menage-A-Trois (46' cutter rigged)

Ahoy -- Good Ship Menage-A-Troi
Avast ye DX Lubbers, and where might ye be sailing fer??
Skull Island sez ye, shiver me timbers buts thats the home of
K1NG K�NG and he don't low no Dxpeditions there.
Better plan on Fantasy Isle -- dey got Da Plane Da Plane!!
Or one might furl the scuppers and head for
Tabacco Spit next to Mary Cay

Avoid Grief Reef sez I
A good CW spot might be QueEss Cay
But Avoid Pay Atoll and Bootlegger's Strait, however
But Have a Bon Voyagee Maties sez I.

Me thinks your post is akin to Troll Atoll, Maties

73
Rod -  land Locked in San Diego

BTW - Who's Robert???

Unfortunatly, that happens to a lot of cruisin' hams..... But most of them WERE planning on coming back....

>Am I correct in thinking that Hams might want to fly out to where I am
>and crew on the next let....and of course operate /MM and at the next dx
>spot?

I doubt it. But I'm sure you could find some cruzers that want to go along. Check the inter island net on 14.315 at 0800z daily, I think you'll find somebody to go along for the ride. When you get to the DX spot, please don't operate /MM. Put your feet on the beach. If you operate /MM you'll become famous like Don Miller, not like Lloyd and Iris.

>Any suggestions as to which spots to 'put on the air ' first.

Yes, I'd recommend P5. I think that would probably be very popular with everyone you speak to on the radio. Don't forget to enlist a QSL manager before you go, and take along an Inmarsat terminal so you can email back the logs. Have a nice trip.

The most important thought being lost in all aspects is that ham radio is a hobby. It does have serious sides (ARES/RACES/ARC, ad nauseum) but it should primarily be fun. I agree with a basic code test, in fact I never argued about the current system. It was a rite of passage.

I also enjoy assembling models, yet I do not have silk screening or painting perfected. For those who enjoy code they are free to embellish and enjoy this aspect. Similarly for packet, TV, etc..

When it ceases to be fun, get out. In the meantime let's accentuate the positive aspects of our hobby and quite debating items which will change. Versatility, after all, is what the majority of you have professed in your notes.
Godspeed

If you want to lose the HF bands, just keep CW.

Look at the trends in HF and VHF.

I rest my case.

Okay guys and gals, everyone is bitching about CW, nothing of interest to say on phone, or about the internet.

So, what is it going to take in order to get more new people on the bands?

The only thing I can think about is video-phone.

Like the Dick Tracy watches, or Star Trek comm pad, etc.

Let us invent it! Like we did with HF radio in the 1920's, like FM repeaters in the 1960's, like packet radio in the 1970's, etc, etc.

I agree with your thoughts of not lowering standards be it radio or school. However, you can drop old outdated or non use techniques and put in place something of equal importants to keep the standards up and be more useful. Case in point, as far as higher learning in school: Drop the courses on how to operated a mathematic sliderule and put a course on how to program a computer. Twenty years ago, sliderules were widespread and people needed to know how to use one, because the electronic age hadn't come yet. Now that the computer age is here, sliderules are history. So drop the sliderule and put computer programing in its place, you haven't lowered your standards. You can do the same thing with radio license testing.   I view the code testing about the same as learning the sliderule. Interesting but limited to todays world. If someone wants to learn either skill, go for it.

I wish I could have gotten by with only three years of algebra. When I went to college, we started in calculus and it was presumed everyone had a good foundation in algebra. Should we make everyone take calculus just because?

BTW, I am a General class and I learned code, but it was a nine month struggle and I have promptly forgot it. CQ, CQ, CQ.... MY NAME IS, MY QTH IS..... doesn't interest me.   Don't miss code either. I am glad that I was exposed to it on the otherhand.

Well, it sort of exists, it's called ATV.

However, if you want it a little more portable, it may take some doing. One problem is that the ATV video signal takes up a 6 MHz bandwidth. Getting any real range on the ATV frequencies requires a good antenna system; which will make it impossible for something of an HT ATV unit. I do recall reading about someone trying to make such a thing, but his system was more for short range.

I did put a small video camera on my remote controled car and added an ATV transmitter. The range isn't very far, BUT everyone sure gets a kick out of "driving" the little car while watching the image on the TV.

Ham Radio needs better PR work. Most of the non-Hams I talk to don't even know we exist or if they do, they don't know what we do.

73,

Bob

C

 So drop the sliderule and put
>>computer programing in its place, you haven't lowered your standards.

>>You can do the same thing with radio license testing.   I view the
>>code testing about the same as learning the sliderule. Interesting
>>but limited to todays world. If someone wants to learn either skill,
>>go for it.

I say limited basically because most CW people send and receive at a slow speed 5, 13, 20WPM or maybe more?) Yes there is a small percentage of people that can copy at 25+ WPM. CW is like speaking a foreign language and takes lots of practice but usually much slower than voice.   Yes its fun for some and yes there are people that get very good at it. If a person likes the challenge, go for it, just like learing a second or third language. In my example, sliderules can get the job done, but they are slow compaired to todays computers and calculators. Should sliderules classes be mandatory? Or should they be phased out (which they are) and the high standards of whatever licensing program be maintained by introducing the study of new technology fitting to the subject? CW should not necesarrily be foregotton but less importantance should be placed on mastering it. A 5WPM test should suffice for all classes of license would be my recommendation.

I bet you more people are communicating by the new electronic internet than by CW. Face-to-face communication, followed by telephone and then followed by internet would be my first guess at the most used forms of communication. I don't belief CW would make the top 10 list.

>Why do you say limited when it is the second most used mode?

Whoever you are cgoin@ime.net

The nature of your reply was uncalled for and your bad language is no
excuse for not
knowing the answer. Were it not for the fact that you are an insipid
little troll I would be
angry but must, instead, consider the source and wish you all the best
in your endeavors to
impress someone else. And, by the by, you left out the "U", "C","I:",
and "G". A loud filthy
mouth that cannot spell is a sad sound indeed. I am posting this here so
that everyone can see what kind of person you really are.

sad indeed..

Have about 50 used 6 and 7AH 12 VDC gel cells for sale. All load tested good. PERFECT for QRP rigs
and portable operation. I have sold hundreds of these to the QRP boy's on the QRP mailing list and all have been very satisfied. Had a few damaged in shipping and one came back DOA which I replaced for the fellow free of charge but that's it. I am the service manager for an alarm company and we change our customers batteries every 3 years as preventive maintenance. These used cells should provide another 2 to 3 and probably longer service if used and recharged properly. Cells come fully charged and are ready to go. They can be recharged with a simple wall wart charger available at Radio Shack or a 1 amp automotive charger. I guarantee against DOA.
Brands are Yuasa, Interstate, Radionics and Portalac.

4 ah cells are $8 shipped CONUS (SOLD OUT)
6ah cells are $10 shipped CONUS
7ah cells are $12 shipped CONUS

Images of the cells can be seen at:

I agree with Casey. What's wrong with a little challenge now and then to prove to yourself that you can and to the fraternity that you really want it.

As for justification for CW, I think there will always be a need for it. Imagine for a moment a worldwide catastrophy of some sort and you were able to survive, but your gear didn't. You have nothing but junk and parts left and you have to rebuild something to communicate. A sophisticated ssb unit is out of the question, but a simple oscillator is not. Hmmm, maybe CW isn't such a bad idea after all. John

While your argument makes sense on the surface, I wager the dropping of (more stringent) CW testing will not be accompanied by an increase in standards elsewhere in the test. I site the history of the testing program here as a clear example of how standards slowly, but surely drop.

It has been my experience that many opposed to the CW requirement simply don't want to spend the extra effort, regardless of the subject. They will be no more accepting of an increased technical requirement than they are the CW requirement. After all, why would most Hams need to know about resistors, transistors, tubes (gasp!), etc. when all they do is go down to RS and buy an HT. Why should they have to learn all that irrelevant stuff? They aren't building radios. All they need to know are operating protocols and a little bit on safe operation.

Give in on the CW requirement and the rest will surely fall. Do you believe the bands will be better after this? I don't. 5 wpm CW is not that hard, really. If, for whatever reason, 5 wpm is unreachable, there's still the Tech license. What with repeaters, packet and satellites, there's more than enough modern research work to do and fun to have on 50MHz and up. Why would anyone doing, for example, spread spectrum work want to be on the 80M band?

If they do succumb to the clamor, I hope they leave a little bandwidth on HF reserved for CW. It needs so little, given it's efficient use of spectrum.

Just my $0.02 worth.

NO its not a bad idea for what you just said
just get rid of it as a testing method
keep the mode infact you caould even expand teh cw portiion of the
band as far as i am concern..just get rid of it as a test..we dont have
one for rtty to see if you can type 30-35 words
we dont have one for atv to see if you can get a pic on the air

we dont have one for phone to see if you speak the kings english in a PROPER manner
WHY CODE

It is your choice if you want all the SPAM that comes your way when you use these newsgroups. I do not have the time to weed out all the junk, although my system is getting better at doing it for me.

Personal replies are nice, but I think we all learn more from group posts anyway.

I believe that practically anyone can learn CW. It really is easy. I struggled with it when I got my ticket at 10 yrs. and 13 wpm was hard for me too, but one day I decided that I was going to spend at least 15 min per night using it. In two weeks I was copying over 20wpm in my head. Iv done nothing but CW for the past 8 years.

It may not be everyone's favorite, but it isn't too difficult to become an obstacle for any half intelligent person.

Oh, please! As you can imagine, with the volume of posting I do, I get plenty of spam. But it only takes 15 to 30 seconds a day of pushing the delete key to get rid of it (you don't actually *read* that crap do you?). If you don't have that much time, what are you doing posting to net news?

What *really* peeves me is people who munge their reply addresses when they send me *email*. (I get 30-40 a day.) There's no possible way that a valid address sent in private email can generate spam. I will *not* try to unmunge your address. If a reply bounces, it bounces, and you won't get the benefit of an answer to your query.

In the newsgroups, I generally reply to a post with a follow-up post. So I don't care if the poster's email address is munged. But if you send me private email and expect a reply, you'd better have a valid reply address in the header.

And while on the subject of pet peeves, will you people *please* quit posting messages containing HTML junk in them. They are virtually unreadable, and I will not take the time to try to ferret out the text amongst all that crap. Remember, newsgroup postings should contain *only* plain monospaced ASCII text. Reserve that HTML crap for your webpage.

Gary

Scott,

You are quite right! My son at 12 years old learned CW in 30 days. The number one obsticle to learning CW is "Laziness". There is no way around it..... It takes daily practice..... If you are not willing to invest the time and effort you will never learn code. Not ment to be judgmental, it's just a fact!

Me too. I used to try to respond both to the news group and directly but so many of the direct replys get bounced I normally don't do it any longer. I set filters on the subject so that e-mail with "XXX", "money" and such go directly to the trash can - I never see them. Gets rid of a lot of the spam since most of what I get is either X rated or how to make a million bucks in a week.

Hmm, if these amps are for export only, then you won't mind publishing your
export license number now will you?

[long price list of illegal amps snipped]

>If shipped out of the country prices are much higher...

Then post those prices because you aren't allowed to deliver
these amps to a US destination since they lack the Type
Acceptance required in the US.

> --

It would be a very boring newsgroup that had only posts from people sucking up information by asking questions only and demanding email replies.

I don't read newsgroups to read people's questions, I read newsgroups to see what other people have to say. Since I'm already here, then I might as well add to the newsgroup by answering questions when I can.

My replies hopefully to appeal to some. Perhaps they wanted to ask a similar question, but were hesitant for any number of reasons. Or perhaps they've never thought of asking such a question, but seeing the answer in some way is helpful. By answering questions, I (and others) help to keep those people reading the newsgroup, so at some time in the future when there's a question they can answer, they will be here to answer. Or maybe at some time in the future, someone else will ask a question that's already been answered by myself or someone else, and the people reading the messages today will be able to answer the question tomorrow because the question and answer has been here already.

And don't forget the whole point of FAQ's are to collect frequently asked questions, and answer them, in an attempt to avoid the repetition in the future. But by keeping things off in email, someone who's good at cataloging won't have access to the answers, so they'll be unable to get involved and create a FAQ for the newsgroup.

One of the things that annoys me is when I respond to someone's question in the newsgroup, many times there will be a followup from the original poster, but via email. Often, I never get around to answering them, because I either have to look something up or because I just don't feel like it. SOmehow, if you answer a question in the newsgroup, you become an expert or maybe it's just that you are perceived as someone who will be helpful. But when the poster does a followup in email, they lose the potential of the collective mind of the newsgroup to respond.

Mr. albert,

Dyslexia is a visual disorder. There is nothing visual about CW unless you are deaf. Ask the many deaf and blinf CW operators. The web pages you sent me also indicate that Dyslexia is a treatable disorder. In the case of aphasia I can see that being a special case. In fact, there are laws and provisions for people to exempt themselves from the CW requirement by having a waiver signed by a physician. I certianly would not be critical of anyone in this situation anymore than I would someone who participated in marathons in a wheelchair. I know several people from the ranks of amateur radio that have severe dyslexia. I am one of them.

Excuses are like assholes, everyone's got one!

Hi OM's

I'm planning on visiting the USA spring 1998. Of course I want to bring (and use) my radio's. Anybody knows what's the procedure to follow? I have a CEPT Class I licence (HF/VHF/UHF/SHF) for region 1 (Europe/Africa). I suppose I have to apply for a region II licence somewhere? pse help me out!

Rgrds, Pleun (PA3HHO)

While I'm on holiday pse email your comments to: pa3hho@qsl.net

AT LAST !!! Gary and I agree on SOMETHING !!!

If your time is SOOOO valuable that you can't delete a few junk
email messages, then mine is SOOOOO much MORE valuable,
that I don't have time to fix your NOSPAM.CLAM email address to
try and help you with something.

But as one last chance to get you normal, I'll offer you a solution
to your junk email problems:

1. Go to Deja News and sign up for an account.
2. Change your email address in your newsreader software to

whatever-you-signed-up-with@deja-news.com

3. Go back to Deja News once a week, and read any personal
mail you have. Delete the one or two junk email messages that
make it thru Deja New's junk mail filter.

Usually, anybody you want to get email from knows your email
address anyway....

And for you more parnoid types, I just read that the lastest
email address bots are running around looking thru HTML code
on web pages looking for email addresses too, so if your ham
```

club club has your email address listed on the club web page,
you are in big trouble....

I have no definite feelings either way. My only belief is that one should take the code test every 5 years to show proficiency much like a driver's license test. Otherwise you are fraudulently using your license if you do not remain proficient. Too many time I hear persons tell me that they got the 13 wpm just to use the phone. Oh, well. Frankly i wonder why KW, ICOm et al have not pushed this revision before now.

Gary,

Your postings are always informative and thorough, so I appreciate your activity in this newsgroup. I would, however, like to lobby for a different response to spam - both from you, and from the rest of the newsgroup's readers.

While it may only take a few moments to delete the spam you receive, the current level of spam activity on the 'net is only the tip of the impending iceberg. These people are technically capable of sending tens or even hundreds of thousands of messages with a click of a button. If spammers are tolerated instead of eliminated, we can look forward to seeing a 1000:1 ratio of spam to desirable email. I, for one, use my email for business and for pleasure, and its utility would be entirely trashed by such a future.

You might feel that (a) you are an insignificant person on the net, (b) you do not have the time to deal with spam, or (c) you don't have the expertise to do anything but hit the delete. These are the responses the spammers love. If they send out 10,000 emails that are tolerated, and receive only one positive response, they've made money! They clicked a button, and you paid to download their refuse. And no, there is no long-term safety in filters, or in impending legislation. These panaceas will work only if spammers find it unprofitable to circumvent them.

So - what should you do? Take the time to send out some complaints. Never respond to the spammer's email - it only verifies your address. Complain to the spammer's ISP, and if they fail to act, complain to the ISP's ISP. Send out as many complaints as time allows, even if it's just one every week or two. Don't just complacently delete spam.

I recommend that everyone spend a little time reading a few anti-spam sites on the net. This is not just another conspiracy paranoia subject. It deserves your time and just a bit of your effort. Please see:

http://spam.abuse.net

Broaden your search from there. This site and others will explain how to effectively complain about spam.

Now, as to the subject of the original posting, whether you use anti-spam measures in your email address is your own choice. I hope people are tolerant of those who choose to do so. They are justifiably angry about spam.

Please forgive the tirade, and the off-topic post.

73 - Bob, KI8AB

Hello there :)   I'm an electronic musician seriously looking for old SYNTHESIZERS, KEYBOARDS, drum machines, analog sequencers, vocoders, MIDI rack synths, unusual old effects and all related electronic musical equipment.

In general, I'm looking for working or non-working instruments made in the late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and especially ~PATCHCABLES~:
The more unusual, the better.

_Moog

Seem to be a few issues going on in this thread:

1. Newsgroup postings requesting a personal/email reply.
Although we all recognize the benefit of public postings adding to the
base of knowledge, there are legitimate reasons for requesting an email
repply. As someone pointed out, people may not tune in regularly to
that newsgroup. I believe that the method I use may satisfy everyone.

My newsreader can reply to the group, the email, or BOTH. If a person requests an email response and I feel it is of general interest, I reply to BOTH. Really simple. If on the other hand, the question isn't worth replying to, then just don't reply. But no need to taake offense.

2. Anti-Spam munging.
The world is not homogeneous. Some people are more offended by spam than others. People who use a work account (like me) may be particularly sensitive to getting flooded by X-rated messages. What is my secretary or coworker going to think when she checks my email account for me when I'm out of town? And geeze guys, how long does it really take to erase a few characters in an address (as long as the need to do so is prominently pointed out)!

3. Munged (private) emails.
People who munge their reply addresses when they send *email* just need to be reminded that it doesn't help. Also, perhaps it was a mistake. I recently sent a couple emails to people in this group about an antenna question. Unfortunately, I had inadvertantly left my email address munged after doing a few news postings, and forgot to "unmunge" it. Bob graciously replied and reminded me of my error. Gary on the other hand apparently took offense and didn't bother to reply (last names deleted to protect the innocent). Such is life.

BTW........

DO NOT AUTOREPLY
REMOVE "ZZZ" FROM EMAIL ADDRESS.

I think that the CW test should be replace with a HF packet network management test.

I still can think of any really use for CW now a days.

Everybody has drop the used of CW in military, coast guard, government, and all other areas of communications where getting the message out is important.

Why, Who works slow old hf packet? Thats something for a written test
anyway.
I hate to sound like a spoil sport, but I think packet is lame. I'd
rather get on the LL modem and boogie woogie..Just my opinion though. I
feel I have the right as much as everyone knocks cw.
> I still can think of any really use for CW now a days.
I can't think of much of one for hf packet. Where as I run cw almost
every day.

> Everybody has drop the used of CW in military, coast guard, government, and

Except for the amateur's. So far anyway. MK

I'm always mystified by those people calling "CQ DX, DX ONLY, PLEASE" (well, some of them are polite enough to say "Please") and then spending 50% of their time telling respondents that *they* are not DX. I quite enjoy pointing out that I'm in the DX listings of the callbook, or asking them if *they're* DX. The general definition of DX now seems to be anything rare or anything not in the CQ caller's card collection (or maybe not with a nice-enough picture) Only telepaths can know whether or not to reply.

It's delightful to hear the minority who actually specify geographic regions or countries.

> A two-way QRP to QRP contact of 2000km on 80m within one's own country
> is not generally considered DX,

Not everyone has a big enough country ;-)

Cheers

Actually, the military still teaches CW.  Ask any navy "O" brancher that
attends NTTC Corry Station, or a 98H from Fort Devans.

But it's not always delightful to hear the results - one night recently I heard a few G land stations on 20 meters, and since that's a hard place to work from the Pacific, I started calling CQ UNITED KINGDOM. The reaction, judging from the spots from the rest of Europe on the cluster, was not a favorable one. But I did work a few guys from G land.

What If I'm not interested in packet.  Should I be forced to take the test on
packet?

Oh my God, I thought understanding Dutch was a problem, nope, I had my
problems with the radio stuff like:

> Our station is an old Yaesu FT-707. It's an oldie but a goodie! The 707 can
deliver a clean 100 watts to the antenna which should be sufficient for some nice
worldwide QSO's. We don't know for sure what antenna we're going to use. We can
make a simple inverted V dipole for 20 meters and/or 40 meters. But maybe we can
borrow a FD-4 which can be used on all non-WARC bands from 80 tot 10 meters.
Anyway, if the antenna is   not 100% resonant we'll tune it with a
Yaesu FC-707 antenna matcher (not in the picture).

I think it's a Scouting Radio thing is it, can someone explain. What's
QSO's ?

Greetings!

For those of you who haven't tried the Yaesu FT747GX On-Line rig yet.

The FT747GX has been On-Line for about three months now, it works well.

The receiver is tuned with your web browser and you can hear it live
with Real Audio.

Get your free radio acccount at the Java Controlled Web Receiver
http://www.javaradio.com

Welcome!

Clearly we telepaths have no need of Amateur Radio.

Although with that fairly rare GM4 call, you needn't
resort to telepathy (?)

I think that in order to be spared a morse code test, one should be able to
display an adequate usage of one's native language with respect to grammar
and spelling.

Now, wouldn't that make the numbers of CW licenses issued in the US take a considerable step towards a majority of the hams tested? Imagine the results...

Why should we have to "Justify" CW.... 99.99% of everything transmitted on all of the phone modes is "garbage"... When was the last time you heard anything of real value on phone?

It's that .001% that counts..... It's the same with CW.

Cheers,
dt

Pleun,
Reciprocal licencing is available for you. Below is the information you
need. The FCC form you will need is available on line at
http://www.fcc.gov/Forms/Form610A/
GL es 73
Dan KA1SZP

US TO PARTICIPATE IN CEPT GUEST LICENSE ARRANGEMENT

....Most European hams visiting the US no longer will have to submit FCC
Form 610A.
Last September (1997), the US State Department applied for US
participation in the
European Conference of Postal and Telecommunications

Administrations(CEPT) Amateur Radio licensing system. A holders of a CEPT license can operate in CEPT-participating countries without having to apply for a reciprocal license.

Approval of the US request came in late January at a meeting of the CEPT Radio Regulatory Working Group (WGRR), in Groningen, The Netherlands. The European Radiocommunications Office (ERO) has been instructed to officially notify the FCC of the decision approving US participation.

Also last fall, the FCC proposed amending the Amateur Radio rules to make it easier for hams holding a CEPT license or an International Amateur Radio Permit (IARP) to operate during short visits to the US.

Sorry, some nice chap spread this discussion all over several groups, I now see.

I agree, I too dislike wide crossposting, and only did it unintentionally with the reply function on this browser. I'll now do my part to let the thread die, as it ought to. I only post this to thank you for pointing the problem out to me in such a friendly manner.

Cheers
David

I am designing a FSK receiver using a Philips 2080 paging receiver. It has a very narow bandwidth of around 8kHz and a sensitivity of -125 dBm. The problem I'm faced with is that since the bandwidth is very narrow and I am operating at 400MHz and 900MHz, I'm going to be experiencing frequency drifts from my TCXO (crystal oscillator) due to aging and temperature. So basically, I might drift outside the bandwidth of the paging receiver. Does anyone have any ideas as to how I could correct the frequency drift problem? The synthesizer used to mix down to my IF is controlled by my microcontroller. I was thinking I could somehow track the signal (RSSI?) and adjust my synthesizer accordingly Any ideas?

Thanks.
Jeff.

Hello out there,

I had an earlier post looking for somebody who has or does silk screening for a Hammarlund HQ-180A. Well, looks like the silk screen is a fat chance. So since that is the case, does anybody out there have a junker HQ-180A with a decent front panel. If the price is right I will be glad to take it off your hands (grin). Just got finished painting the cabinet (it was a very ugly gold color). Now I am looking to do the rest of the radio (the face is gold too, YUCK)!!!! Please email me at bierbier@bellsouth.net.

Thanks and 73's

Gary

I'm looking for California frequencies for the following counties:

Almeda County
Alpine County
Amador County
Butte County
Calaveras County
Colusa County
Contra Costa County
Inyo County
Kings County
Lake County
Mariposa County
Merced County
Mono County
Monterey County
San Benito County
San Fransico County
San Mateo County
Santa Clara County
Santa Cruz County
Sierra County
Sonoma County
Tulare County
Tuolumne County

They are for an online database for Northern and Central California that I'm working on. Any help is greatly appreceated and thanks to all those in advance.

Mike

Well since I can't find a reasonably priced IC-551D I figured I would
try for a Swan 250 again... :)

Looking for a good working Swan 250 or 250C with matching power supply
and mic. Cosmetic condition not all that important but prefer the rig
to be in good working condition with full power output. Wanting to get
back into 6 meters on a budget but with more than 8 or 10 watts.
Please email what you have and your asking price.
Thanks !

(snip)

Wow! I never thought that I would rate being called an elitist! <G>

If you enjoy CW and have your code speed up, why not go for the extra? The written test is nearly as easy as the novice test, so that is not a barrier to most people.

Truthfully, I wanted the 2x1 callsign for its brevity on CW. Now that most, if not all, of the 2x1 callsigns have been issued, I'm not certain that I would be bothered to go to the trouble either. And it will be a cold summer day in Georgia when I opt for a vanity call that has a recurring renewal fee attached. A one time fee, maybe. I haven't been keeping abreast of the rules in this regard, so what I am suggesting may already be fact.

CHECK OUT THE POLAR BEAR 98 WEB SITE FOR ALL THE LATEST INFORMATION.
http://webhome.idirect.com/~galati

FOR THOSE WHO ONLY CAN GET TEXT FILES, READ THE TEXT THAT FOLLOWS:

The DXpedition is starts on Sunday August 18 at 6:30PM (22:30UTC) at Toronto Union Station. We will be operating from the Ontario Northland Railway's " Northlander" under the call sign XM3PBX. We'll probably be operating all night until we arrive in Cochrane Ontario about 5:00AM Monday morning. We will then transfer XM3PBX to the ONR's Polar Bear Express to Moosonee, which will be leaving Cochrane at about 8:30AM. We'll continue to operate on it until we arrive in Moosonee about 1:00PM. We will then be setting up XM3PBX at the ONR's Moosonee train station and operating from there. XM3PBX will be operating SSB on the trains and CW and SSB at the train station.

Bob-VE3LLE and Lyle-VA3DXE will move their gear to the Moose Factory Museum and operate a station from there under the callsign CH3HBC/325 to celebrate the 325th anniversary of Moose Factory. All CH3HBC will be SSB operation.

John-VE3VGI and Aldo-VE3IMR/VA3AG will be flying up to Charlton Island to operate an IOTA island, under the call sign of VE8C. VE8C will be SSB, with possibly some RTTY and CW operation.

There is also a fourth station CI3XXV, that will operate from various freshwater islands(weather permiting) under the callsign CI3XXV/25 and maritime mobile CI3XXV/MM for one day from the M.V. Polar Princess, out of Moosonee. The day is not determined and will very likely be either Tuesday, Wednesday or Thursday. All CI3XXV operation will be SSB.

This will continue until Saturday August 22, when all stations except XM3PBX and CH3HBC/325 will cease operation. CH3HBC/325 will continue to operate, being run by local hams, Paul-VE3KBL and Craig-VE3CIJ until the end of August.

On Saturday Aug 22, we will leave Moosonee on the Polar Bear Express at 6:00pm operating XM3PBX as we travel south bound. We are scheduled to arrive in Cochrane at 10:30PM. XM3PBX will go off the air for a short time so that we can transfer to our coach on the Northlander. The Northlander will leave Cochrane for Toronto at 6:00 AM Sunday August 23 and we will be operating XM3PBX on the southbound trip until about 4:00PM at which time the Polar Bear DXpedition will cease all operations.

That's itinerary for the DXpedition. We intend to operate on 40M, 20M, 17M, 15M, 6M on 2M.
We haven't determined the final frequencies, but we should have that information by the middle of July.

Here is a list of the participants.
Aldo Galati-VE3IMR/VA3AG
John Harden-VE3VGI
Paul Lantz-VE3KBL
Terry Shortt-VE3GTS
Bob Elston-VE3LLE

I have an NCR 12 volt 70 amp power supply I wish to trade straight up
for a working older 386 or 486 laptop computer preferably with at
least a 14,400 modem in it. Supply is a monster but works wonderfully.
Has adjustable over voltage. over current protection. I believe also
the voltage can be adjusted up to 24 VDC but would have to check on
that to be sure. Let me know what you have.

Fact 1 - We can not open our bands to everyone, because there is not enough bandwidth on HF. Listen on 40m in Europe, and you will come to the same conclusion.
- So we need the candidates to pass some kind of test before we give away tickets.

Fact 2 - We (especially here in Norway) have a problem recruiting younger people into our hobby. The average age of the Norwegian ham is very high !.

Question!
How can you find a test that do not discriminate younger people, and still be so difficult that you need to be serious to pass it.

Solution -

CW at a speed of 8wpm
(Today we need to pass 12wpm here in Norway for the "full license", and that's a little bit to hard)
+
A better knowledge of the rules concerning amateur radio and knowledge of etiquette on the bands.
(If you know what is right, maybe you do the right things)

No one with a licence has the right to moan about being restricted
because they have not/cannot pass the morse test,THEY KNOW THE RULES
BEFORE THEY JOIN THE CLUB.If they don't like the rules ,why are they in
the club.

It sounds more sensible than the *kill all morse* brigade.What a lot of
people do not (or refuse ) to recognise is,that there is still a place
for the morse code,it is still a vital part of communications that will
succeed when the lazy push button,or microphone only operators cannot
make a good communications link.It may be old but so is democracy,and
even then there are those who would like to get rid of that.For their
own selfish reasons of course,not for the good of the rest of us ..

Dutch Scouting Group "De Bevers" from Nijmegen The Netherlands has been QRT
for six years, but during the 1998 JOTA they will be back on the air with
the call PA3HHO/J.

You can check out their brand new homepages at
http://www.qsl.net/pa3hho/jota

They're still under construction and not all pages are in English (yet), but
anyway.. let us know what you or your group thinks about our pages! Skeds
for international or local QSO's to pa3hho@qsl.net

The good part is the lower 25 kc of each cw band. Thats where all the
good dx hangs out.
The fone bands don't amount to too much.

>

> wpm requirements.
> <that will be a very long time>

And they can't do it until international treaty is changed. The
requirement for cw is dictated by treaty worldwide. But all said, code
is easy to anyone who really wants to learn it. And attitude is
everything. If you think you won't like it, and won't use it the chances
are you won't. When I learned cw , I was in the 8th grade. I viewed it
much as a game. And it didn't take me more than a week or two to learn
the alphabet and numbers. Within a year I was outcopying alot of friends
of mine that had tickets already. I still didn't at that time. All in
the mind,and the attitude. But I view it just as another necessary part
of getting a ticket. I hate certain parts of the written
test and think much of the questions on the extra class test are fairly
silly, but I don't advocate doing away with them just because I don't
care for them. It's all the parts that equal the whole. MK

Well I be doggone, It's my 2 land equal... Nice call you have. Good taste...g
I think the fee is one time. Not positive , but think so. Thats the only reason I upgraded was to get a new call. Best 30 bucks I ever spent.

So, I am an elitstis ..?

I always thought I was lazy. I sat on a General for 25 years, conducted
a class and when a coupl of my students got their Extra I got off my
ass and went in one night and did the 20 WPM, Advanced and Extra.

Does that make me elite ? I still sat iy makes me lazy. I could have
upgraded years before I did.

The fee for a vanity call is a recurring regulatory fee and will
be charged each time you license is renewed. The fee will drop to
somewhere in the neighborhood of $13 around the middle of September 98.

I have been hearing about a "supposed rulemaking" that is supposed
to come within 30-90 days. I could care less what they do with code,
like this gentleman said about certain written questions....I also
don't care about that elite coded segment where all the "great DX"
hangs out.......I have heard many stray into the advanced portion.
I still won't work 'em if I cannot talk to 'em. I will do an
occasional CW contact, but they will be FEW and FAR between

Hey Curtis, Haven't heard you on the air in a while. But then again I
guess thats partly my fault..I didn't write what they quoted me as
saying. But heck,getting my extra didn't change me a bit. I still as
obnoxious as ever...g I could have gotten mine earlier too but I'm the
lazy type myself. The only reason I upgraded was to change my call. But
I'm glad I did now. Get lots more cw room. Mark NM5K

CHECK OUT THE POLAR BEAR 98 WEB SITE FOR ALL THE LATEST INFORMATION.

http://webhome.idirect.com/~galati

FOR THOSE WHO ONLY CAN GET TEXT FILES, READ THE TEXT THAT FOLLOWS:

The DXpedition is starts on Sunday August 18 at 6:30PM (22:30UTC) at Toronto Union Station. We will be operating from the Ontario Northland Railway's " Northlander" under the call sign XM3PBX. We'll probably be operating all night until we arrive in Cochrane Ontario about 5:00AM Monday morning. We will then transfer XM3PBX to the ONR's Polar Bear Express to Moosonee, which will be leaving Cochrane at about 8:30AM. We'll continue to operate on it until we arrive in Moosonee about 1:00PM. We will then be setting up XM3PBX at the ONR's Moosonee train station and operating from there. XM3PBX will be operating SSB on the trains and CW and SSB at the train station.

Bob-VE3LLE and Lyle-VA3DXE will move their gear to the Moose Factory Museum and operate a station from there under the callsign CH3HBC/325 to celebrate the 325th anniversary of Moose Factory. All CH3HBC will be SSB operation.

John-VE3VGI and Aldo-VE3IMR/VA3AG will be flying up to Charlton Island to operate an IOTA island, under the call sign of VE8C. VE8C will be SSB, with possibly some RTTY and CW operation.

There is also a fourth station CI3XXV, that will operate from various freshwater islands(weather permiting) under the callsign CI3XXV/25 and maritime mobile CI3XXV/MM for one day from the M.V. Polar Princess, out of Moosonee. The day is not determined and will very likely be either Tuesday, Wednesday or Thursday. All CI3XXV operation will be SSB.

This will continue until Saturday August 22, when all stations except XM3PBX and CH3HBC/325 will cease operation. CH3HBC/325 will continue to operate, being run by local hams, Paul-VE3KBL and Craig-VE3CIJ until the end of August.

On Saturday Aug 22, we will leave Moosonee on the Polar Bear Express at 6:00pm operating XM3PBX as we travel south bound. We are scheduled to arrive in Cochrane at 10:30PM. XM3PBX will go off the air for a short time so that we can transfer to our coach on the Northlander. The Northlander will leave Cochrane for Toronto at 6:00 AM Sunday August 23 and we will be operating XM3PBX on the southbound trip until about 4:00PM at which time the Polar Bear DXpedition will cease all operations.

That's itinerary for the DXpedition. We intend to operate on 40M, 20M, 17M, 15M, 6M on 2M.
We haven't determined the final frequencies, but we should have that information by the middle of July.

Here is a list of the participants.
Aldo Galati-VE3IMR/VA3AG
John Harden-VE3VGI
Paul Lantz-VE3KBL
Terry Shortt-VE3GTS
Bob Elston-VE3LLE
Don May-VE3UNA

.

If you have to justify CW, don't do it. An extra license offers
no advantage over a tech license above 50 mhz. There is no
magic to the code. If you want to learn it, put in the time and
you will.

Well, I just spend the last 8 hours updating the page...

Need to build a RIB or programming cables?
Need to add more channels to your Motorola 2-way?
Need to program your Motorola 2-way out of its normal bandsplit?

Find the answers to these questions and many other tips on the Batwing
Laboratories site, just follow this link:

http://www.psychonet.net/~batlabs

Hi, I have a kenwood UHF mobile radio as listed (tk805d) for sale.
Radio has 16ch. & seems to go from infinity and beyond, but guessing
410-490ish....  FIELD PROGRAMMABLE thru ptt and front buttons/channel
selector!!!
Will program to suit and include copy of software for same!!
Sorry, no programming cable, but hey, It does have the factory hangup clip!
:)  This radio is in LIKE NEW condition, as it's only about a year or two
old.  Includes radio, s/w, new style mic/hangup clip and mounting bracket.
no cut cords, either!  no docs. Asking $250 shipping included CONUS.  email
please and no trades!
thanks,
Randy, KC8CPK

Have about 40 used 6 and 7AH 12 VDC gel cells for sale.
All load tested good. PERFECT for QRP rigs
and portable operation. I have sold hundreds of these to the QRP boy's
on the QRP mailing list and all have been very satisfied. Had a few
damaged in shipping and one came back DOA which I replaced for the
fellow free of charge but that's it. I am the service manager for an
alarm company and we change our customers batteries every 3-4 years as
preventive maintenance. These used cells should provide another 2 to 3
and probably longer service if used and recharged properly. Cells come
fully charged and are ready to go. They can be recharged with a simple
wall wart charger available at Radio Shack or a 1 amp automotive
charger. I guarantee against DOA.
Brands are Yuasa, Interstate, Radionics and Portalac.

6ah cells are $10 shipped CONUS
7ah cells are $12 shipped CONUS

Images of the cells can be seen at:

Have about 50 used 6 and 7AH 12 VDC gel cells for sale. Also have about 3 4AH 12 VDC cells. All load tested good. PERFECT for QRP rigs and portable operation. I have sold hundreds of these to the QRP boy's on the QRP mailing list and all have been very satisfied. Had a few damaged in shipping and one came back DOA which I replaced for the fellow free of charge but that's it. I am the service manager for an alarm company and we change our customers batteries every 3 years as preventive maintenance. These used cells should provide another 2 to 3 and probably longer service if used and recharged properly. Cells come fully charged and are ready to go. They can be recharged with a simple wall wart charger available at Radio Shack or a 1 amp automotive charger. I guarantee against DOA.
Brands are Yuasa, Interstate, Radionics and Portalac.

4 ah cells are $8 shipped CONUS
6ah cells are $10 shipped CONUS
7ah cells are $12 shipped CONUS

Images of the cells can be seen at:

Looking for an all mode 2 meter rig such as an older Kenwood TS-700A
or Yaesu FT-221R. Physical condition not all that important as long as

```
it works well. Please advise what you have and your asking price.

Hi

Can anyone help with info on how to modify the European spec Icom IC706 mk II to cover 144 - 148MHz and 50 - 54MHz on transmit? I have one, and a very nice radio it is, but I can't use it to work through my local repeaters :-(

Any info by email please, as I don't get a chance to check the newsgroups very often.

Thanks & 73

I agree about the bad manners of repetitive posting, but a little devil asked me: "Imagine if someone suggested to Walt that the DXCC was the sole arbiter of what is and isn't "DX", what would the response be?"

To someone, somewhere, Ontario must be DX

The term "DX" is so undefined and so abused that it's pretty meaningless. I stopped worrying about the award culture years ago, I'll settle for an interesting QSO anyday.

I couldn't resist!

Sorry!

I agree. The term is meaningless today. It's a 1920s concept where the spanning of successively longer distances with one's amateur station was the supreme demonstration of amateur achievement. The concept of 'DX' has probably passed its use by date and is fast becoming an anachronism.

A two-way QRP to QRP contact of 2000km on 80m within one's own country is not generally considered DX, but a 15 000 contact on 20m (black boxes, beams and kilowatt linears both ends) is. But I know which of these contacts could be considered the most meritorious when all factors are taken into account, and it's not necessarily the longest distance QSO.

rec.radio.amateur.homebrew,rec.radio,rec.radio.amateur,rec.radio.amateur.equipment

Hi Don,

I recently picked up a new book titled:

"Build Your Own Intelligent Amateur Radio Transceiver"
by Randy L. Henderson

Publisher: McGraw-Hill
Other : 355 pages, Hardcover
ISBN # : 0-07-028263-3

The book covers such topics as:

1) Understanding and building a microprocess-based receiver and/or transmitter based upon the cheap but versatile 80C31 microcontroller chip from Intel
2) Interfacing techniques for the various input/outputs of the IC's used
3) Understanding the "real-world" behavior of RF circuits as well as
4) Techniques for keeping digital switching noise out of sensitive analog circuits
5) Understanding frequency synthesis techniques used in modern radio equipment
6) Understanding AM, SSB, CW, VFO, BFO, IF, XTAL filter circuits and a whole lot more HF circuitry, therory and applications that you will be working with
6) Printed circuit board fabrication techniques you can do at home, cases, ect.

This book seems to be a great cookbook-style guide that completly covers the building of a rather sophisticated radio transceiver (or receiver only) while giving you the understanding to do some re-design on your own. You can modify the radio to strip out or add ALL of the bells and whistles you might think of, for a one-of-a kind completely customized rig that you build yourself !!

I am still reading (learning a LOT !!) and collecting parts. My budget for this radio is around $100-$200. Once you start buying some parts, the incentive for actually building the rig goes up tremendously. If nothing else, this book got me back to building my own stuff. EXPERIMENTING with CIRCUITS is 90% of the fun for me!

I think the book sells for about $39.95 U.S. (or more?) and is a

hardcover book.
I got the book FREE through a book club. If you can't find it (for free), Email me
and I can get THAT book AND up to 4 other great electronic books (of YOUR choice)
with a TOTAL VALUE not to exceed $135.00, for just $4.95 + S&H, all sent to your door
along with a billing statement from McGraw-Hill. The only catch is that you MUST buy
at least 2 MORE books (at very reasonable bookclub discounted prices) over the next
twelve months. Also, "I get two free books of my choice" for refering you to the
bookclub. We all win on the deal !!!! This offer was made by my bookclub on my last
mailing and is good for at least another 2-3 weeks.   Anyone interested,   PLEASE
LET ME KNOW and I will email you a list of books to choose from. You pick from the
list and I will place the order. You should get the books in 1-2 weeks from order.

Good Luck, and   73 de N5APG - Jim

P.S. For build-it-yourselfers, I would also recommend the following book(s):

"Mastering Radio Frequency Circuits - Through Projects & Experiments"
"Secrets of RF Circuit Design - Second Edition"
"Old Time Radios - Restoration and Repair"
"Mastering Oscillator Circuits - Through Projects & Experiments"
"IC Op-Amp Cookbook"
"Making Printed Circuit Boards" - For the Hobbyist

and WITHOUT a DOUBT, don't be caught without the book:

"The ARRL Handbook"   !!!!!!!!!!!!!!

Actually Rudy, I learn a lot from replies to other people's questions
and I'm sure others do also. Public replies to individual questions
is a good way to spread knowledge over netnews.

PARG - Phantom's Amateur radio Group International

The PARG web page has a special section devoted to the
interactive discussion of the ARRL proposed changes to the
FCC license structure. We encourage all to stop by, take a look,
& make a recommendation or post.

It is the intent of PARG to forward the suggestions & opinions to
the necessary authorities & responsible parties.

Yes, you are. And a damn crossposter, too...... Since you aren't worried
about DX, I'd suggest you don't put this crap in a DX newsgroup.

The flaw in your logic (or lack of it) is the purpose of a national park is NOT to provide emergency communications in the event of a disaster. That IS the purpose and focus of amateur radio. Ever heard of field day? What do you think its' purpose is? If you must be ready to provide emergency communications, then why not be able to do that in as many ways possible?

know the reality and get a life.   listen to 3950 now. a lot of them
are extra hams.

>Some people just con't understand NO!

>Cutie Boy doesn't need H.F. access. Give him a 11 meter linear instead.

I don't use 11m either. Why use radiowaves for making DXs CQs and
QSLs. What a hell.   I love to use phonepatches by using 2m repeaters
though. It is practical. Everyone says it is cool to have free phone
calls too and they show some interests afterwards (say   know code =
know ham   and you will get these people away).

>What is so hard about learning the code? If you have half a
>brain....................

I have code. Sorry. I am, therefore, a good ham as coders suggest.

Slight correction and addition here --

The current Technician class license does not require Morse code, and has no privileges below 50Mhz (which is still a talk-around-the-world band when conditions are right). The old general class technical exam (element 3) was split into VHF and HF technical exams (elements 3a and 3b).

In short, a current Technician has passed only the technical exams (elements 2 and 3a).

Technician-Plus has also passed the 5wpm Morse code test (element 1a).

A Technician Classic passed the old element 3 exam before they changed the rules, as well
as the Novice class exams (elements 1a and 2). I am in this category.

The Novice license has the same HF privs as the technician (voice on 10m, Morse code
everywhere else), and a few VHF bands (220Mhz and 1.2Ghz).

> enough to learn before I was too old to learn.

It *is* possible, though. Remember that in the old telegraph days Conventional Wisdom was
that the receiving operator would translate the message from the paper tape recording, and
it was a big surprise when the operators started transcribing by ear.

> So the phrase: "he's only got a Technician" probably means he didn't
> start as young as I did. It's a meaningless distinction.

Actually, I got my Novice during the CB craze (ex KA3ALR) when I was in 8th grade, and did
very little with it until I went into the army and got assigned to DC. I was among the last
who did their technician exams before an FCC examiner, and I had to go to Baltimore to do it.
I got the current call sign when I moved within the area and decided to get a 1x3 before
they ran out. I was sort of hoping for N4ZZZ, but instead ...

I think that the real problem is that people get bashed for not
wanting to do code, then when they try they get bashed for not
doing it fast enough, then when they get faster, they got where
they <if they did really want it, they got there> wanted to go, quit
doing it and got bashed again

this happened to me, I started code practice <listening> about
a year ago, dropped it because of some of the local hams attitudes
and mannerisms heard on the hf bands, then decided to get it on
my own with no help from the geezer squad.
the guys in question were running a code class on a local repeater
and were real butheads about it.
I got my first dx today, yeah it was great, BUT I like vhf/uhf dx...
as well and that is where a lot of no coders are. Most of the people
that I talk to on the local repeaters are the guys who run them.
<there are only 3 that I frequent> and only 1 of those is nocode.
He works on the side fixing radios for EXTRA class hams.
as well as putting up thier towers and antennas <GRATIS
because that is what ham radio is all about, helping each other
out to defray costs and promote the hobby>

the biggest problem that I see for most new hams is that no one really
wants to help guide them in the direction that they want to go in.
After all it is the ham in question who should tell what his destiny
in the hobby is.
I know several VUCC and WAS award holders that are nocoders....
I also know one DXCC no coder!

CHECK OUT THE POLAR BEAR 98 WEB SITE FOR ALL THE LATEST INFORMATION.

http://webhome.idirect.com/~galati

FOR THOSE WHO ONLY CAN GET TEXT FILES, READ THE TEXT THAT FOLLOWS:

The DXpedition is starts on Sunday August 18 at 6:30PM (22:30UTC) at Toronto Union Station. We will be operating from the Ontario Northland Railway's " Northlander" under the call sign XM3PBX. We'll probably be operating all night until we arrive in Cochrane Ontario about 5:00AM Monday morning. We will then transfer XM3PBX to the ONR's Polar Bear Express to Moosonee, which will be leaving Cochrane at about 8:30AM. We'll continue to operate on it until we arrive in Moosonee about 1:00PM. We will then be setting up XM3PBX at the ONR's Moosonee train station and operating from there..

Two from our group will move their gear to the Moose Factory Museum and operate a station from there under the callsign CH3HBC/325 to celebrate the 325th anniversary of Moose Factory. The Moose Factory station will be operated by Bob-VE3LLE and Lyle-VA3DXE as the main operators with help from the rest of us.

John-VE3VGI and Aldo-VE3IMR/VA3AG will be flying up to Charlton Island to operate an IOTA island, under the call sign of either VE8C or VE8I. The call hasn't been determined yet.

There is also a fourth station CI3XXV, that will operate from various freshwater islands(weather permiting) under the callsign CI3XXV/25 and maritime mobile CI3XXV/MM from the M.V. Polar Princess out of Moosonee.

This will continue until Saturday August 22, when all stations except XM3PBX and CH3HBC/325 will cease operation. CH3HBC/325 will continue to operate being run by local hams, Paul-VE3KBL and Craig-VE3CIJ until the end of August.

On Saturday Aug 22, we will leave Moosonee on the Polar Bear Express at 6:00pm operating XM3PBX as we travel south bound. We are scheduled to arrive in Cochrane at 10:30PM. XM3PBX will go off the air for a short time so that we can transfer to our coach on the Northlander. We'll probably be doing limited operating on Saturday night so that we can get some sleep. The Northlander will leave Cochrane for Toronto at 7:00 AM and we will be operating XM3PBX on the southbound trip until about 4:00PM at which time the Polar Bear DXpedition will cease all operations.

That's itinerary for the DXpedition. We intend to operate on 40M, 20M, 15M, 6M and 2M. We haven't determined the final frequencies, but we should have that information by the middle of July.

Here is a list of the participants.

I am interested in getting back into AR Packet and maybe Packtor.
Mainly as a way of getting email via the ether instead of ethernet.
I guess one way is packtor if you're not near a VHF digipeater.
Therefore I am interested in what TNC to get, AEA, KAM, MFJ??

I'd be interested in hearing of opinions on price/features.
Thanks and 73

yep. increase code requirement speed to 50 WPM or something. I am
glad to support it.

I am looking for a repeater controller that will allow direct placement on
the air when calling the controller over the phone.

For commercial application.

Thanks in advance.

My experiences tell me that SOME adults CAN learn 13 WPM code quickly. I know of some adult hams that went from 0 to 13 WPM in under 3 months. By the way, these hams have a very good sense of music, beat, and also have a very good memory. I'm sure there are other factors, but those are the things I noticed.

Also, I passed the 13 WPM test not as a kid, but at 45 years of age.   The secret was I had to build the reflex action between hearing the sound and writing the letter.   The real problem is that many make the mistake of counting the dits and dahs. One can do that up to about 10 or maybe 11 WPM, but beyond that you can't think fast enough. For me, --.- just sounds like an "F" and I don't even think about how many dahs and dits I heard. By the way, one year ago I couldn't have passed a 1 WPM code test.

I know for a fact that adults CAN and DO learn the code. The reason why they don't is because many don't realise that it may take them MONTHS to build that reflex action where they can hear the sound and know the letter. Once they find that they don't seem to learn it quickly, they give up.

73,
Bob

I didn't really want to get involved in this, but like everyone else, I just had to toss my opinon out there.

We must face it, code doesn't make a better amateur! I'm not even going to touch the to-code or not-to-code discussion. Rather I will try to point out the fact that just because an amateur knows code, that doesn't make them better then a no-code amateur. Sure there are a lot of no-code idiots out there, but there are also as many idiots out there with code!

I won't argue code out here, what I will say is, if you want to improve the quality of people entering the amateur service, then you should work on the writtem exams! That's where all the knowedge is people. Think about it! I mean, knowing code is like knowing French, English, or any language. Knowing another language doesn't make someone a better amateur, but knowing how a radio works does!

It's sad to hear new amateurs on the air asking how to program their ht's! Obviously something is wrong here, and it's not because of code. It's because our written exams aren't tough enough! I mean what's 55 question multi choice exam supposed to prove. Think about it, the guy already has the answers to the questions, what kind of exam is that? It's this multi choice thing that is killing us. What happened to the old days when you actually had to know something about radios and electronics to get your license? When you actually had to study for the exam!

I suggest we all stop arguing about code, and perhaps start to work on improving the quality of our written exams. 55 questions is just not good enough! And it shouldn't be a 100% multi choice exam, why not toss a few essay questions in there too? And for god sakes, stop releasing the answers!

Keep the code, loose the code, ether way we must address the lack of quality in our written exams.

Okay, now that I've said my peace, I'll get off of my soap-box. I just thought this was a point that needed to be addressed.

SSB(HF) has the ability to convey speech over long distances, far over the horizon, sometimes to the other side of the Earth. This uses frequencies at which the inside of our ionosphere acts like a reflector. The effectiveness of these reflections varies with time of day, time of year, and with an 11 year cycle of sunspot activity (solar radiation and particles are what makes the upper atmosphere ionised and hence reflective) Links are not particularly reliable on any particular frequency, so the usual ploy is to have a variety of frequencies available, and to try them until one that works over the wanted path is found. Computer programmes exist to model and predict route/frequency availability. Even for short range use, suitable frequencies have to be chosen, you can get the effect of a transmitter being receivable in one place thousands of miles away, with no discernible signal 30 miles away!

VHF transcievers are available with SSB modulation, but the majority are FM. VHF signals are at frequencies where ionospheric long-range coverage is rare. There are some other propagation modes that can give surprisingly long ranges, sometimes for several days per year. These things are unpredictable in the extreme. If you are wanting fun, pursuing and exploiting them can be great fun. If you are interested in communications just as a reliable tool for some other interest or task, then VHF radio is really best thought of as having little more than line-of-sight range.

UHF is pretty similar to VHF in these respects, with even lower likelihood of ionospheric reflection. There are other longer range propagation modes that occur occasionally. Think of reliable communication to the horizon (with dead spots caused by terrain in hilly areas), along with great flurries of activity when interesting weather effects or meteor showers open up a long distance path.

Both VHF and UHF (and microwaves), by penetrating not reflecting at the ionosphere, are used to link with satellites, and can also be bounced off of the face of the moon, in this way very great ranges can be achieved whenever artificial satellites or the moon is in a suitable place. This is predictable!

Antennae? selection depends on what frequency, what purpose, whether fixed/mobile/portable, how much space you have, what climate they have to survive (chiefly wind velocities), how much money is available, and often construction/planning permissions from whatever government bodies are involved. Clearly there are so many variables, that you either have to be very specific about your interests, or you need a small library of books.

I hope this helps

FCC and IC told us that we can use phonepatch for ordering the pizza as well as making reservations for hotels or getting taxi from the airport. It is their business for making the profit. We don't make even a cent from ordering the pizza. It's a pizzaman's business.

>In the United Kingdom and other European countries, of course, any
>phone-patch and other third party traffic is strictly forbidden.

then I will probably write the letter to UK when I live there. If you

wanna change in something, you gotta do something !!   Once someone
finds out that making a phone call is free, they will get the license
right away and good way to keep ham spectrum.

Looking for someone or someplace that has a FM-747 FM unit for my
FT-840 rig. Anyone know of any dealers that has them on closeout ? I
don't want to pay $99 for one ! I know there was a few places closing
them out for $25 or so. Any help greatly appreciated.

Have about 40 used 6 and 7AH 12 VDC gel cells for sale. Also have about 10 4AH 12 VDC cells. All load tested good. PERFECT for QRP rigs and portable operation. I have sold hundreds of these to the QRP boy's on the QRP mailing list and all have been very satisfied. Had a few damaged in shipping and one came back DOA which I replaced for the fellow free of charge but that's it. I am the service manager for an alarm company and we change our customers batteries every 3 years as preventive maintenance. These used cells should provide another 2 to 3 and probably longer service if used and recharged properly. Cells come fully charged and are ready to go. They can be recharged with a simple wall wart charger available at Radio Shack or a 1 amp automotive charger. I guarantee against DOA.
Brands are Yuasa, Interstate, Radionics and Portalac.

4 ah cells are $8 shipped CONUS
6ah cells are $10 shipped CONUS
7ah cells are $12 shipped CONUS

If you buy 2 of the same I will knock $3.00 off the total price.
Images of the cells can be seen at:

Unfortunately, this argument is ultimately useless and self-defeating. Amateur radio will be gone in a few years because those who crave spectrum and can pay billions for it adore the fact that amateurs cannot unite.

Oh well, it was fun while it lasted.

Has anyone had any experience with the Federal Signal Corp Emergency Alert Receiver (EAR). It looks to me like it will work as a weather alert receiver for the new S.A.M.E. Format or as a fire alert receiver with to tone sequential. I found it at
http://www.fsws.com/ear.htm   Jim AA0FJ

Butch, FYI...
   "Cutie Boy" is Masataka Noda, a young Japanese student in Canada.
He raises hell under several different monikers, my favorite being
"Code Sucker". He can be found on several other NG's. And, yes, Masa
is a licenced amateur radio operator, if you are wondering. He's
actually not as bad as he seems...just opinionated. But then, aren't
we all?? :)

Peace,
DUCK

Hi there :) I'm an electronic musician seriously looking for old SYNTHESIZERS, KEYBOARDS, drum machines, analog sequencers, vocoders, unusual old effects and all related electronic musical equipment.

In general, I'm looking for working or broken instruments made in the late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and especially PATCHCABLES:
The more unusual, the better.

_Moog
_ARP
_Roland
_Buchla
_Serge
_Korg
_PPG
_EML (electrocomp)
_Polyfusion
_EMS (synthi and vcs-3 putney)
_RSF
_Oberheim
_Sequential
_Steiner Parker
_Aries
_Synton
_E-mu

```
_Electro-Harmonix
_Ionic
_OSCar monosynth
_Roland    _TB-303 Computer-Controlled *Bassline
_Roland    _TR-909 Rhythm_Composer
_Roland    _TR-808  "                         "
_Pearl Syncussion SY-1
_ARP       _sequencer
_EML-400 _Electrocomp _sequencer
_Korg _SQ-10 _analog _sequencer
_Simmons SDS5, 6, 7 Drum Brains

If you have any of the above or similar equipment which you'd consider
selling, or know where i could find some, please email me at
rolandman1@aol.com If you'd like to, please include your phone # since my
email has occasionally been unreliable in the past.

Thank you very much for your time and I apologize if this posting bothers

The problem is not Masa, he's fairly easy to filter out. The problem
is all the idiots responding to him. I never see his posts firsthand,
but I have to wade through dozens of idiots quoting him (complete with
his stupid sig file) every damn day.

Be advised, I'm going to start killfiling anybody who flames Masa
pretty soon. That should clean up the newsgroups quite a bit.

Ahhhh Mark,
the Linkcomms will do that (with a code) and so will the others...
whats the difference between what they do and what you need?

What happens if a non amatuer calls the repeater by some strange
chance and gets on the air?

Hi James,

In my county we are selling them to the public. They have been configured with the tones in such a way that they are only activated if WE set them off. That way we can assure people that they will be heard only when a real emergency is happening locally. The local radio station which is contracted to perform EA broadcasts also sells a receiver, but that gets activated by them for six or seven different counties in the area.

The ones we sell get tested twice a month, once with the test for the school and hospital emergency receivers, and once with the outdoor siren test. Other than that they are only activated during an emergency in the county that would affect many people. And not just weather...

This also gives the public a radio they can use to find out about what is happening, rather than searching through local broadcast media stations who may or may not know yet what is going on...

I am told that they CAN be configured as a general EA receiver and will work anywhere in the country in that configuration. Having seen no advertising I would bet they use the SAME technology since they are relatively new. But that's just a guess. Hope this helps.

I'm working on a web page directory for california and was wondering if any body could email me frequencies for Kern, Tulare, Fresno, San Luis Obispo, Tuolumne, Santa Barbara and Amador counties. Any help would be greatly appreciated, thanks for all of your help.

Thanks in Advance,
Mike

Why don't you go to:

http://www.wvsc.wvnet.edu/~fcc/

and download the California database and
get ALL the pertinent frequencies you
want. No sense in messing around with
a few bits and pieces of lists and scraps
of lists.

:-)

> Who did you buy them from?

Directly from Federal Signal.

> How much do they cost?

Something close to list price, we do not get much of a price break only making 5-7 dollars on the sale. We were told that even if we order 40 at once (we might need to soon) we won't get a better price. It's something like $140, but don't quote me too closely.

> How much do you sell them to the public for?

As I said, about $5-7 more than we buy them for. That may change soon so we can cover shipping, etc. but we don't see it as a big money-maker.

> Did you give any
> consideration to the one by either L-Tronics or Reach?

Not sure as the sales started before I did...I just joined this group in January.

> How do you like them? Are they programmable by a PC or some
> other means?

As far as I know they are programed at the factory. Since I have not actually seen one yet I don't know how easy that programming is to alter. I'm told they work extremely well. I know of one large University (hint, hint: see email address) that is buying them as quickly as we can get them, about 5-10 a month, and may want to place a large order soon.

Hope this helps...

Excellent amplifier for 6 meters using THREE 8930's in RF deck. Three 19" rack panels housing power supply, metering and control circuits, and RF deck with blower. Time delay in power supply, antenna switching, and full metering. This amp will run big power on 50 Mhz. for a BIG signal. Requires less than 20 watts of drive for full output. Price is $795 plus UPS. Commercial quality

construction, excellent equipment.

I am looking for mods that will enable Kenwood's
TM-V7A mobile vhf/uhf and the TH-G71A vhf/uhf
handheld to transmit on the VHF marine band.
(Possibly WHICH diodes need to be eliminated)
If you know of such a modification or a web page

```
that might contain such info - PLEASE drop me an
email. It would be very much appreciated.
Thank you for taking the time to read this posting...

CHECK OUT THE POLAR BEAR 98 WEB SITE FOR ALL THE LATEST INFORMATION.

http://webhome.idirect.com/~galati

FOR THOSE WHO ONLY CAN GET TEXT FILES, READ THE TEXT THAT FOLLOWS:

The DXpedition is starts on Sunday August 18 at 6:30PM (22:30UTC) at Toronto Union Station. We will be operating from the Ontario Northland Railway's " Northlander" under the call sign XM3PBX. We'll probably be operating all night until we arrive in Cochrane Ontario about 5:00AM Monday morning. We will then transfer XM3PBX to the ONR's Polar Bear Express to Moosonee, which will be leaving Cochrane at about 8:30AM. We'll continue to operate on it until we arrive in Moosonee about 1:00PM. We will then be setting up XM3PBX at the ONR's Moosonee train station and operating from there..

Bob-VE3LLE and Lyle-VA3DXE will move their gear to the Moose Factory Museum and operate a station from there under the callsign CH3HBC/325 to celebrate the 325th anniversary of Moose Factory.

John-VE3VGI and Aldo-VE3IMR/VA3AG will be flying up to Charlton Island to operate an IOTA island, under the call sign of either VE8C or VE8I. The call hasn't been determined yet.

There is also a fourth station CI3XXV, that will operate from various freshwater islands(weather permiting) under the callsign CI3XXV/25 and maritime mobile CI3XXV/MM from the M.V. Polar Princess, out of Moosonee.

This will continue until Saturday August 22, when all stations except XM3PBX and CH3HBC/325 will cease operation. CH3HBC/325 will continue to operate, being run by local hams, Paul-VE3KBL and Craig-VE3CIJ until the end of August.

On Saturday Aug 22, we will leave Moosonee on the Polar Bear Express at 6:00pm operating XM3PBX as we travel south bound. We are scheduled to arrive in Cochrane at 10:30PM. XM3PBX will go off the air for a short time so that we can transfer to our coach on the Northlander. The Northlander will leave Cochrane for Toronto at 7:00 AM Sunday August 23 and we will be operating XM3PBX on the southbound trip until about 4:00PM at which time the Polar Bear DXpedition will cease all operations.

That's itinerary for the DXpedition. We intend to operate on 40M, 20M, 15M, 6M and 2M. We haven't determined the final frequencies, but we should have that information by the middle of July.

Here is a list of the participants.

Aldo Galati-VE3IMR/VA3AG

John Harden-VE3VGI

Paul Lantz-VE3KBL

Garry Hammond-VE3XN

Bob Elston-VE3LLE

Don May-VE3UNA

Doug Baker-VE3BKR

Craig Jenning-VE3CIJ

Lyle Sibbald-VA3DXE

George Burns-VE3INB

Your analogy between learning CW and College worked 20 years ago BUT not today..(I agree with every other part of your support for CW)..The whole purpose of college today is to

1) Extend Childhood as far as possible..

2) To meet as many people as possible so after graduation (Some 6 to 12 years later), one can "Network" themselves into a "position"..(notice NOT a JOB!)..

The only problem with CODE I see is the attitude of those that say you MUST have it..For tradition or otherwise...HAM radio is dying from lack of interest period..I don't see it as work..It just doesn't hold my interest as it once did..(PLUS, if you've been to alot of local club meetings, there's so much arguing and carping that newcomers are turned away..)..

The solution is NOT to have or do away from CODE..The problem is HOW do we keep Ham Radio ALIVE...Everything must progress or die...

Oh yea, why is it HAM equipment remains SO expensive ESPECIALLY the USED stuff?..When I go to hamfests, I see old JUNK going for as much or MORE than what it cost 20 years ago..Make the hardware AFFORDABLE!..Let's get some GOOD under-100 buck deals going AND market the HELL out of it!..That'd get more folks going..

Innovation doesn't mean forgetting the past BUT building on it for the future..

Thanks for mentioning the geezer club, er squad...If THEY had their way, we'd have to BUILD our own radios to THEIR specs, and ofcourse, BUY all the parts from THEM at an inflated price (unless they liked us and gave their friends special discounts)..

HAM is DYING people..I've got a wall full of lp's some of which will never re-released on CD's BUT I'm not screaming at the companies to either 1) Start pressing vinyl records again or 2) Make me a CD..Just like the LP spelled the death of the 78rpm and it the wire recording...

Code or NO code doesn't matter if the airwaves are controlled by stick-n-the-mud, fuddy-duddy, STUFFED SHIRTS that insist things stay static and never change..That now said, I agree CODE needs to be remembered and taught BUT does it have to be the same way it has been for the past 100 years?..

The Navy is dropping it for better or worse...If you continue, the manufactors of ham equipment will all go under for lack of new radio sales..I say, do what you can to ENCOURAGE not scold folks into learning code..

I think sometimes we code and no-code folks inflateth our true worth in disastors, NOW that cell phone and digital redundancy handle most situations..

In fact, I have a buddy that flies for United that sees the ham radio folks at our local "plane crash/disastor" drills as needing-a-life NERDS that are worse than useless. They're IN the WAY of the professional rescuers using the police/fire frequencies..What's needed in these scenarios is NOT a bunch of hams running around with HT's thinking they're BIG SHOTS while tripping over their own shoe laces..

I didn't take the test to "be a part of the action"..I did it because I like talking to other people...BUT even that's been years..I TOO have been turned-off by the attitude of ham radio in general..

The best hams are those that are HOME BASED/Stationary during disastor situations...

Hello all,

I currently have a Yaesu FT-980, which is a 110/220vac only HF rig, very
nice radio. I've loved it for quite some time, but a recent move is making

me move my HF station and antennas, to my vehicle, due to antenna
restrictions..

I'd like to get a good mobile rig for my truck. I've looked at the Kenwood
TS-450S/AT and the ICOM IC-706, and found these both to be ideal. If you
have one of these rigs your looking to part with, let me know. I am not
looking to purchase immediatly, but will in the near future.

The FT-980 is still somewhat attached to me, so I would prefer to outright
buy a new rig for the truck, but if you're looking for a good base-only HF
rig that's almost as nice as the FT-1000, let me know also :)

Thanks!
Nate

The problem with legislators is that they have no knowledge of what
they regulate.There should be recourse
directly on them for what they do.

Hi,
Does anyone else hear a strange signal that covers about 6950 to 7050 kHz, almost 24 hrs/day, that sounds a little like the sound a turkey makes? I have determined that it is a series of tones in seemingly random order, each one on for 20-30 ms, on different frequencies as close as a few hundred Hz, but since they are spread over such a wide range, the complete transmission does not fit in my receiver bandwidth.

The signal transmits in bursts about one second long every 45 seconds, and seems to fade out for a while at local midday. During the evening here in northern ZL it is about S8-S9.

I would be VERY interested in hearing from anyone else who hears it, preferably with their location, the signal strength and if possible, a bearing. If anyone actually KNOWS what it is and who it is, I'd like to hear the details too. Our local Intruder Watch has been unable to identify it through official channels.

Email me as149@detroit.freenet.org

73,
Murray ZL1BPU

Sorry if this is a bit off topic, but I'd like to know if anyone can point me to a source of surplus electrical equipment. What I am looking for is a DPDT power transfer switch rated at 100 Amps or higher (something that would allow switching between a commercial power source and a generator, for example). New ones cost around $500 and I have to think there must be someplace that sells these used/surplus at a *much* lower cost (I only need one). I figure if anyone would know of a source, you folks might.

Thanks in advance for any pointers. To send me reply e-mail, please make the obvious modification to my e-mail address.

"A couple reasons for CW"

#1 CW is an art form that should never be lost.... For this reason alone CW should be a manditory requirement for a Ham license.

#2 There seems to be many experts on CW out there. Most have never been on HF other than a CB radio. The "Fact" is.... when all other modes fail, CW "Will" get through.

#3 In an emergency a battery and some wire will make a simple (Dirty)
CW transmitter. The only requirement is you need Hams out there who can
send & copy CW!

This might not be what you are after, but if you don't need an automatic transfer switch, Square D and many of the other electrical suppliers make a disconnect that has a center off position, up is one power source, down the other. This is a disconnect that you might see ahead of a motor, pump, compressor, etc. with the exception of the special features. I don't know how much they cost, but I can't feature them costing $500 even new.

Louis

Ever hear of hurracane Andrew and Homestead AFB. Ask them about how their cellphones worked...Not! The only communications available was Ham radio with a few repeaters and simplex. No Police, no fire, no emergency repeaters. They weren't using CW though to my knowledge. But they could have.

Was that the same on that came back up the Gulf and hit Louisiana..

Next day I spent 4 hours running a health/welfare net. No police
or cell phones involved .. Just me and my ham radio and other Hams.

Try some of the building demolition places in your area (or nearby large
city). DON'T count on an accurate answer to a telephone inquiry. Most of
these companies have warehouses of stuff removed from old buildings,
homes, factories before tearing the place down. Quite often, prices are
flexible/negotiable.  - Bill H.

Have about 40 used 6 and 7AH 12 VDC gel cells for sale. Also have about 10 4AH 12 VDC cells. All load tested good. PERFECT for QRP rigs and portable operation. I have sold hundreds of these to the QRP boy's on the QRP mailing list and all have been very satisfied. Had a few damaged in shipping and one came back DOA which I replaced for the fellow free of charge but that's it. I am the service manager for an alarm company and we change our customers batteries every 3 years as preventive maintenance. These used cells should provide another 2 to 3 and probably longer service if used and recharged properly. Cells come fully charged and are ready to go. They can be recharged with a simple wall wart charger available at Radio Shack or a 1 amp automotive charger. I guarantee against DOA.
Brands are Yuasa, Interstate, Radionics and Portalac.

4 ah cells are $8 shipped CONUS
6ah cells are $10 shipped CONUS
7ah cells are $12 shipped CONUS

If you buy 2 of the same I will knock $3.00 off the total price.
Images of the cells can be seen at:

 What you are asking would make your radio illegal !  To
modify a amateur radio out of band makes it non type
accepted and illegal.
And the old story of " I have a licenses for that service "
won't work.
```

```
The licenses is to work that band with a type accepted
radio, not a modified illegal radio.
Just go out and buy a Marine Radio.

&nbsp;What you are asking would make your radio illegal !&nbsp; To modify
a amateur radio out of band makes it non type accepted and illegal.
<BR>And the old story of " I have a licenses for that service " won't work.
<BR>The licenses is to work that band with a type accepted radio, not a
modified illegal radio.
<BR>Just go out and buy a Marine Radio.

Check this out! John Mackey screwed up last night when he ROGUE-CANCELLED the following Post that was made by someone ELSE via an Anonymous re-poster! The original post can be viewed at Deja News at the following URL:

http://x2.dejanews.com/getdoc.xp?
AN=370084994&CONTEXT=900079004.1723727939&hitnum=0&AH=1

Or here is the post in its entirety that was canceled by Mackey:

======

```

```

He is not going to continue to destroy this newsgroup without a response. I am not suggesting here that you should harass him, nor even call him. But, if you do, do it from a pay phone in case he has caller I.D.
This info came from one of the very popular white pages, so you can verify it if need to.

JOHN E MACKEY JR

Thanks for the nice words!

I attribute my tenacity & standing up for whats RIGHT
to the way my parents raised me & to growing up in
the great State of Iowa, which remains my offical
state of residence even today.

I was raised to always do what is RIGHT, REGARDLESS
of what is popular or easy. Often times, the what is
popular or easy is NOT what is right.

When you do what is right, you know you are correct
in your heart, & that is what is important. THAT
is what makes INTEGRITY!

======[END OF MACKEY'S POST]========

Anyone want to do the honors and forward this information onto
the Abuse Dept at Internet MCI? Hopefully hey will give him the boot
for violating their TOS.

I hope you enjoy the amount of flames you are about to receive from Cheek.
Your life will be hell as long as you keep going, so please do just that.
It's Bill that's one of the few intelligent people on this newsgroup. Mackey
certainly is warped (I wish he would change, but it looks as if it shall
never happen), and you are of the same batch of people who are utterly
asinine.

Put more simply for you, it's people like you who keep this crap going.

No, no ,no Ryan, my boy that's the Mackey way out. You gotta take matters into your own hands with these people.

For example, when he told you to go pop your zits, you should have shared with him how much they remind you of him, how he wears depends himself, but only forgot when the alzheimers kicked in. Then you can tell him his music sucks, his mother dresses him funny, and he wouldn't know a scanner from his own cavernous dribbling poop-chute.. Then you tell him that he's just another flame happy wingnut and drop him in the old killfile. Then, laugh about it, pause and laugh some more.

Works for me, every time.
-Phil

CHECK OUT THE POLAR BEAR 98 WEB SITE FOR ALL THE LATEST INFORMATION.

http://webhome.idirect.com/~galati

FOR THOSE WHO ONLY CAN GET TEXT FILES, READ THE TEXT THAT FOLLOWS:

The DXpedition is starts on Sunday August 18 at 6:30PM (22:30UTC) at Toronto Union Station. We will be operating from the Ontario Northland Railway's " Northlander" under the call sign XM3PBX. We'll probably be operating all night until we arrive in Cochrane Ontario about 5:00AM Monday morning. We will then transfer XM3PBX to the ONR's Polar Bear Express to Moosonee, which will be leaving Cochrane at about 8:30AM. We'll continue to operate on it until we arrive in Moosonee about 1:00PM. We will then be setting up XM3PBX at the ONR's Moosonee train station and operating from there..

Bob-VE3LLE and Lyle-VA3DXE will move their gear to the Moose Factory Museum and operate a station from there under the callsign CH3HBC/325 to celebrate the 325th anniversary of Moose Factory.

John-VE3VGI and Aldo-VE3IMR/VA3AG will be flying up to Charlton Island to operate an IOTA island, under the call sign of either VE8C or VE8I. The call hasn't been determined yet.

There is also a fourth station CI3XXV, that will operate from various freshwater islands(weather permiting) under the callsign CI3XXV/25 and maritime mobile CI3XXV/MM from the M.V. Polar Princess, out of Moosonee.

This will continue until Saturday August 22, when all stations except XM3PBX and CH3HBC/325 will cease operation. CH3HBC/325 will continue to operate, being run by local hams, Paul-VE3KBL and Craig-VE3CIJ until the end of August.

On Saturday Aug 22, we will leave Moosonee on the Polar Bear Express at 6:00pm operating XM3PBX as we travel south bound. We are scheduled to arrive in Cochrane at 10:30PM. XM3PBX will go off the air for a short time so that we can transfer to our coach on the Northlander. The Northlander will leave Cochrane for Toronto at 7:00 AM Sunday August 23 and we will be operating XM3PBX on the southbound trip until about 4:00PM at which time the Polar Bear DXpedition will cease all operations.

That's itinerary for the DXpedition. We intend to operate on 40M, 20M, 17M, 15M, 6M and 2M. We haven't determined the final frequencies, but we should have that information by the middle of July.

Here is a list of the participants.

Aldo Galati-VE3IMR/VA3AG

John Harden-VE3VGI

Paul Lantz-VE3KBL

Garry Hammond-VE3XN

Bob Elston-VE3LLE

Don May-VE3UNA

Doug Baker-VE3BKR

Craig Jenning-VE3CIJ

Lyle Sibbald-VA3DXE

George Burns-VE3INB

Agree!
BUT:
I manage to obtaine my licence and is hereby a full "ham" by knowing the morse-code.
I choosehowever to only use VHF/UHF and is very rear down to HF-region.
Morse code
is never used for me, only packet or OSCAR.

Nobody can do anything with this. After a few months i decide to spend some time at HF and
is soon QRP on 20-meter on SSB with some friends, or we try the 80-meter for chat with some
OZ'ers or SM's Still no morse for me.
I hear something in cw from time to time, but dont care about it.
My expensive program for decoding morse is quite good, i use it and by reprogramming an
terminal or TNC i am QRP with CW by a PC !

The ticket is clear, you have to know it to get a licence on HF, but you NEVER have to use it!
I think it sucks !!!
It also prevents many from getting this as a hobby because the morse is an obstacle !

> . . The ticket is clear, you have to know it to get a licence on HF, but you NEVER have to use it!

Nobody "has" to get a ham license, nobody "has" to operate cw when the do have a ham license, either. You don't know what you're talking about because you don't know anything about real cw beyond a code test. I've had hundreds of thousands of cw qsos over the years, as many as 1,000 cw qsos on a single contest weekend. Tune 7.000-7.050 some night if you think no ham uses or is not interested in cw.

It's your govrnment which requires the code tests and it's your government which has treaties with a couple hundred other countries in which it has agreed to require code tests for radio amateurs. Go complain to your Foreign Minister about how your lack of usable cw skills is a problem and get back to me when he "fixes" your big problem.

> I think it sucks !!!
> It also prevents many from getting this as a hobby because the morse is an obstacle !

Which is good, otherwise the ham spectrum would be flooded with idiots and nobody could use it.

I've got news for ya, child. I didn't say a single untruthful thing. Complain away, baby.

Keep your nose in your own business and I won't have to slap you around constantly.

Must be pretty cool to be 15 and in the house late on a Friday night.

Did i say that we _HAD_ to have a license ???

How many percents og all hams use it regularly ??
And would pass a test given "at the door" suddenly ??

I think someday the WRC "fixes" this one for them self. To bad they have to spend
time and money just because of some amateurs.
Infact since only ham's uses cw, this is soon an obselete thing we could put
on a museum or somewhere....

Is this the reallity ??
Its to bad though, that many other operators concider them selve so perfect that i
almost pukes. But to prevent happiness i dont do it yet...

Thanks Phil... I needed a good laugh and you just provided it. One thing I
noticed, I un-twitted Mackey and don't see any replys to Bill's (or anyone
elses) post about his rogue cancels. Amazing, is he trying to lie low after
his screw-up and getting caught ???? Makes you wonder what he's up to ???

Again, thanks for the laugh.

Mike

I have a Pulse Power Charger for both the Oki 1200 and 1300 lines of phones. This unit also works from 12vdc and 120vac $40.00
Also have a black nicad battery for above. Brand new Never used. $25.00
Have (2) Slim NMH Batterys $30.00 each or $50.00 for both.
Cig lighter power cord, Also is a quick charger. $ 15.00

If you buy all the above i'll throw in the oki phone. It works, But it was droped and the LCD is cracked But phone works great.

Please send mail to kweaver@fix.net

>I've got news for ya, child. I didn't say a single untruthful thing.
Complain
>away, baby.

Hmm... "Baby"? That reminds me of you. You have all the appeal of a paper cut. Even lepers avoid you. You are a fiend and a sniveling, back-boneless coward, and you have bad breath. You are degenerate, noxious and depraved. I feel debased just for knowing you exist. I despise everything about you. You are a bloody nardless newbie twit protohominid chromosomally aberrant caricature of a coprophagous cloacal parasitic pond scum. And I wish you would go away.

Hahahahahah...

>Keep your nose in your own business and I won't have to slap you around
>constantly.

I'm sure you do enough of your own slapping around, so don't worry about me.

You're a putrescent mass, a walking vomit. You are a spineless little worm deserving nothing but the profoundest contempt. You are a jerk, a cad, a weasel. Your life is a monument to stupidity. You are a stench, a revulsion, a putrefaction, a big suck on a sour lemon with a lime twist.

You are a bleating foal, a curdled staggering mutant dwarf smeared richly with the effluvia and offal accompanying your alleged birth into this world. An insensate, blinking calf, meaningful to nobody, abandoned by the puke-drooling, giggling beasts who sired you and then killed themselves in regret for what they had done

<cackling>

>Must be pretty cool to be 15 and in the house late on a Friday night.

ROTFFLMFAO!

Your hand even refuses autoerotism. You are unreservedly pathetic, starved for attention, and lost in a land that

reality forgot. On a good day you're a half-wit. You remind me of drool.
You are
deficient in all that lends character. You have the personality of
wallpaper. You are dank and filthy. You are asinine and benighted.
You are the source of all unpleasantness. You spread misery and sorrow
wherever you go.

I cannot believe how incredibly stupid you act. I mean rock-hard
stupid. Dehydrated-rock-hard stupid. Stupid so stupid that it goes
way beyond the stupid we know into a whole different dimension of
stupid. You are trans-stupid stupid. Meta-stupid. Stupid collapsed
on itself so far that even the neutrons have collapsed. Stupid gotten
so dense that no intellect can escape kind of stupid. Singularity
stupid. Blazing hot mid-day sun on the warm side of Mercury stupid.
You emit more stupid in one second than our entire galaxy emits in a
year. Quasar stupid.

Stick your head in your floppy drive and type "Format a:".
Your intelligence is a Kronecker delta function which spikes at the
value "moron". You are too stupid to live. Go down to the glue
factory, where they dispose of old horses, and volunteer to be
disposed of.

<giggling profusely>

Nothing here was untruthful, either!

Oh, and by the way: "PLONK"!

How many times do you need to post a message. I think the only thing that
had been accomplished is to have your e-mail address placed in a lot of
subscribers kill-files.
Dennis (I don't repeat myself) McGrath

He said below "for commercial applications"....so what's the point?
If it was for AMATEUR use, it would be illegal under Part 97 rules.

MORSE IS FUN , once you have learned it properly !
Why loose out on the fun part of it ?

FOR SALE
Complete kit of 1.2GHz Multifunction Frequency Meter as described in
Elektor Electronics magazine, issues December 1992 through March 1993.
Superb design. Few available.
Kit includes all parts, microprocessor, EPROM, printed circuit board, front
panel foil, ready-drilled case, LCD, wire, connectors, copies of articles,
in short THE WORKS.
This instrument has been built by the thousands by hobbyists and
professional lab workers worldwide. Now the last few are available at a
knock-down price of only 75 (seventy-five) British Pounds (GBP) plus P&P
(GBP 5 inside Europe). P&P Outside Europe: pse enquire.
Period/Pulse measurements, also very SLOW (below 1Hz).
PC RS232 Interface, LCD readout, Analogue/digital inputs. Portable, 9-volt
battery operated.
Will ship anywhere in the world. Cash payment only.

Then the control operator exercises his function and shuts it down.
The dial in should be password protected, however, to prevent this
sort of thing.

Why's that?

97.109(c) says any amateur station can be operated by remote control.
That's just what an operator dialing into the system would be doing.
Of course he has to be authorized to be a control operator, but he wouldn't
have the access password if he weren't.

oh well, hurry up, get the code down long enough to get 13wpm
then get your advanced. That is plenty of room, and the extra
class license while it may make you an elitist, it is not worth it.
75khz of voice space just isn't worth the hassle.

NOW DON'T READ ANYTHING INTO THIS
I just don't feel it is worth it, I am not whining about the
requirements to get it. IF I WANTED IT, I WOULD GET IT.

I like my hf privilidges, I think that I would be just as much a ham without them, BUT if a person wants hf they should go thru what it takes to get the license. If they do not want the code, don't whine about it, don't do hf, or wait until the FCC finally removes the 13/20 wpm requirements.
<that will be a very long time>

I've seen the web site that has a short essay about how Morse code - the original "American Morse" used by the railways, with extra-long dashes and other weird stuff - might not have been invented by Samuel F. B. Morse, but by one of his assistants.

However, be that as it may, I'm assuming that the present International Morse code came into being quite a bit later, and was developed in Europe. Some old books on telegraphy refer to it as the "Continental Code".

Just as "Baudot" is derived from the Murray Code, although the original principle was derived from Emile Baudot,

and the same is true of today's "Uedemann Code" for chess moves, which is actually a later variant, properly called Gringmuth Notation,

I suspect the same may be true of today's International Morse Code. But I haven't seen a reference naming the person responsible for modifying the original Morse Code to the form we use today.

When an operator goes mobile, what are the issues and protections
involved in lightning and their antennas?  Do (should) they simply stop
transmitting?  This doesn't seem like a popular solution for chasers.
Is there much risk of a strike?

Hello,

a friend of mine is looking for a list of RNARS stations, I think it is for some sort of award.

Is such a list available on file (TXT, database or other formats) and/or downloadable from any internet site?

Thank you in advance.

--

Ciao.

Steve, IK4WMH

Looking for good used solid state HF rig WITH WARC bands and a CW
filter. Internal tuner a plus but not mandatory. Please advise what
you have and what accessories are included and a price via email.
Thanks in advance.

I need to get my ICOM IC-3210 going again.
Want to buy non-working but mostly complete radio for parts.
If you have one to sell email price and condition.

thanks,
Mike

What did you wind up with?

I am looking for a used HF rig to get into Pactor
with.... but I've been out of ham radio so long I
know nothing abt the equip out there. What should
I look for for Pactor with a Kam Plus tnc?

Also..... do any of the tnc's work with the Linux
OS?

Have about 40 used 6 and 7AH 12 VDC gel cells for sale. Also have about 10 4AH 12 VDC cells. All load tested good. PERFECT for QRP rigs and portable operation. I have sold hundreds of these to the QRP boy's on the QRP mailing list and all have been very satisfied. Had a few damaged in shipping and one came back DOA which I replaced for the fellow free of charge but that's it. I am the service manager for an alarm company and we change our customers batteries every 3 years as preventive maintenance. These used cells should provide another 2 to 3 and probably longer service if used and recharged properly. Cells come fully charged and are ready to go. They can be recharged with a simple wall wart charger available at Radio Shack or a 1 amp automotive

charger. I guarantee against DOA.
Brands are Yuasa, Interstate, Radionics and Portalac.

4 ah cells are $8 shipped CONUS
6ah cells are $10 shipped CONUS
7ah cells are $12 shipped CONUS

If you buy 2 of the same I will knock $3.00 off the total price.
Images of the cells can be seen at:

Hello to all would-be DXers. Just got my Tech Plus ticket and found 10m is open from San Francisco to Hawaii, S. Pacific and Australia from late afternoon till after dark.

Just thought you ought to know the propagation is looking better on 10!

I've noticed WWVH into the midwest just about every night, covering WWV on 10

and 15 MHz. WWV has been booming in on 20 MHz just before midnight, but not
during the day, which is way counterintuitive to what I was taught about HF
propagation!

I think Cutie Boy is just lacking in some male attributes. I hear that they can give male hormones to help combat his problem.

To the fellow with the Tech-Plus ticket, enjoy the ham bands and ignore the likes of Cutie Boy as he is just a pimple faced little college student that doesn't know his ass from a hole in the ground. Your earned the privilege to be on ham radio.

Cutie boy,

The young man has a TECH PLUS! He has passed the 5 wpm and is welcome to operate phone on 10 meters. Legally!! What is your problem with those of us who have taken the time to learn the code and operate HF? You have been given a welfare liscense to operate above 50 mhz. So operate.

Are you gay? That name "cutie Boy" is not something a man would tolerate, I don't care one way or the other about your sexuality, it's just that I've seen some of the arguments by the Lambda groups and they are defenseless in what ever cause the "little girlish bitching" types are putting forth. No code was high on their list. They wanted to increase their ranks so they figured that a no code general ticket would do that.

Butch Magee, KF5DE

I just acquired a TS-690S and do not find a reference to the IC-10 chip set
that the 440S requires. Is this built into the 690S or is it just an
oversight in the manual? I have an IF-232C box.

In general, yes -- but nothing is absolute especially where ten meters is concerned. Sporadic E in particular commonly happens after sunset and can be VERY intense then.

Congratulatons!

Now tht 10 meters has whetted your appetite, just think what you can do
on 15/20 .. the latter every day, and into the evening!

KF6RLQ is a relatively new call, so you seem to be on a fast upgrade
path. Keep it up!

73...Phil

Rudi,

Congratulations on getting your Tech Plus license !!!

We are coming out of the low end of the solar cycle, so 10 meters
will be getting better and better. Look for several years of
excitment on 10. Right now 10 will have its "ups" and "downs",
so some days it will be real hot and other days, nothing.

Remember 10 can go from hot to cold in a mater of minutes.
I was talking with a guy across the country, his signal went
from S9 on my meter to S0 in about a minute. Oh well, it
happens. Think of it as part of the fun of 10; you never know
what is going to happen.

You may want to keep working on upgrading. I know that 13 WPM
may seem like a lot, but if you work at it, you can do it.

```
Once you pass the 13 WPM and General test, you get a slice of
ALL the HF bands.   From there, it's just the written test to
reach Advanced.  With Advanced you get a bigger slice of HF
AND if you want, a 2n2 callsign.

73,
Bob

I was KF6JHG, I'm now KQ6WQ

John,

Any of the current rigs (from 1980 on) should work fine for Pactor. I've used a Yaesu 101, Icom 730 and Icom 735 with excellent results. Nice thing about the Icoms is their auxiliary audio jacks in back so you're not always having to unplug your mike.

You should be able to run any TNC with Linux as long as you have a standard terminal communications program. I don't know if the proprietary software, designed for TNCs, will work with it though.

Good Luck.

Radio Randy

                        Hello out there,

                I need a schematic and manual for a Hallicrafters S-38.
I know this is not the greatest radio in the world  but it has been
sitting in the closet (friend gave it to me) and I am tired of seeing it
in there not working.  I will pay for copy and mailing cost.

Thanks,

Gary       bierbier@bellsouth.net

```

I need to get my ICOM IC-3210 going again.
Want to buy non-working but mostly complete radio for parts.
If you have one to sell, email price and condition.

thanks,
Mike

Hi folks, I'm an electronic musician *seriously* searching for the following electronic musical equipment, in any condition, even non-working:

-OLD SYNTHESIZERS from the 60's-80's Moog, ARP, Oberheim, etc -OLD KEYBOARDS w/ knobs or sliders Roland, Korg, Sequential, etc -OLD DRUM MACHINES w/ terribly electronic sounds :) -OLD SEQUENCERs w/ knobs for each pitch/step -OLD VOCODERs for that "robot-voice" sound -MODULAR PATCHABLE SYNTHESIZER GEAR, full systems or individual modules - "Switched-on-Bach Moog", ARP 2600, Paia, anything similar. -RACK SYNTHS, INTERESTING EFFECTS and anything related to the above.

-Moog, ARP, Korg, Roland, Sequential Circuits, Oberheim, Yamaha, EML, Electrocomp, EMS, Synthi, Putney (VCS3), RSF, Buchla, Serge, Polyfusion, Ionic, Paia, SMS, Wavemaker, E-mu, Steiner-Parker, Chroma, Aries, etc.

-Roland TB-303 Bassline
-Roland TR-909 Drum Machine
-Roland TR-808 Drum Machine
-Simmons SDS-7 + SDS-5 + SDS-6 Drum Brains and Sequencer
-Pearl SY-1 Syncussion
-E-mu SP-1200 Sampler Drum Machine
-Sequential Prophet VS rack

If you've got any of the above OR SIMILAR for sale or know someone who might, please email me at rolandman1@aol.com Please include phone number as well if you'd like.

Thank you in advance and apologies if this post annoys anyone.

CHECK OUT THE POLAR BEAR 98 WEB SITE FOR ALL THE LATEST INFORMATION.

http://webhome.idirect.com/~galati

FOR THOSE WHO ONLY CAN GET TEXT FILES, READ THE TEXT THAT FOLLOWS:

The DXpedition is starts on Sunday August 18 at 6:30PM (22:30UTC) at Toronto Union Station. We will be operating from the Ontario Northland Railway's " Northlander" under the call sign XM3PBX. We'll probably be operating all night until we arrive in Cochrane Ontario about 5:00AM Monday morning. We will then transfer XM3PBX to the ONR's Polar Bear Express to Moosonee, which will be leaving Cochrane at about 8:30AM. We'll continue to operate on it until we arrive in Moosonee about 1:00PM. We will then be setting up XM3PBX at the ONR's Moosonee train station and operating from there..

Two from our group will move their gear to the Moose Factory Museum and operate a station from there under the callsign CH3HBC/325 to celebrate the 325th anniversary of Moose Factory. The Moose Factory station will be operated by Bob-VE3LLE and Lyle-VA3DXE as the main operators with help from the rest of us.

John-VE3VGI and Aldo-VE3IMR/VA3AG will be flying up to Charlton Island to operate an IOTA island, under the call sign of either VE8C or VE8I. The call hasn't been determined yet.

There is also a fourth station CI3XXV, that will operate from various freshwater islands(weather permiting) under the callsign CI3XXV/25 and maritime mobile CI3XXV/MM from the M.V. Polar Princess out of Moosonee.

This will continue until Saturday August 22, when all stations except XM3PBX and CH3HBC/325 will cease operation. CH3HBC/325 will continue to operate being run by local hams, Paul-VE3KBL and Craig-VE3CIJ until the end of August.

On Saturday Aug 22, we will leave Moosonee on the Polar Bear Express at 6:00pm operating XM3PBX as we travel south bound. We are scheduled to arrive in Cochrane at 10:30PM. XM3PBX will go off the air for a short time so that we can transfer to our coach on the Northlander. We'll probably be doing limited operating on Saturday night so that we can get some sleep. The Northlander will leave Cochrane for Toronto at 7:00 AM and we will be operating XM3PBX on the southbound trip until about 4:00PM at which time the Polar Bear DXpedition will cease all operations.

That's itinerary for the DXpedition. We intend to operate on 40M, 20M, 15M, 6M and 2M. We haven't determined the final frequencies, but we should have that information by the middle of July.

Here is a list of the participants.

A friend of mine is having trouble with his newly purchased (used) Compaq Lite486/25c laptop. He is trying to use it with some ham radio DOS packet programs (thus, the cross-post with the compaq and radio.amateur news groups). Basically, the base addresses for his serial ports are not the standard 03f8 (com1) and 02f8 (com2), which is what his software is looking for (apparently); there is not a way (that

he knows of) to change the software to look at a different base address.
He could not find a setup program for his bios (not at bootup or as a
program on the machine)... this is where I thought he might be able to
change the base addresses. Does anyone know why this laptop uses
something other than the standard base addresses? Is there a way to
change them (without creating conflicts)?

Please email any help to: lfloyd@sonic.net

Thanks!

- Larry

Hello,

Is there anybody anywhere on this world who will be able to help me with
a) a display unit,
b) an IC 7,
both for the above mentioned receiver.
Because of its oldness, parts are no longer available via official channels.
Just -may be- that somebody has such an old device in his cellar or on his
loft or knows about a friend or knows about an acquaintance who may have
such a device in his possession and who does make no longer use of it. I do
have the official schematics.
A message to this newsgroup or a direct E-mail to Th.J.Lingmont @wxs.nl
would be highly appreciated.
Regards from Holland,
Theo.

Can some one help me find answers to following queries.

How to select type of radio communication equipment ?. For what application
SSB(HF) / VHF / UHF transceiver is used ?

How to select a antenna ?

Regards,

Shiv Prakash Khemka

Dear Friend Shiv,

You are asking many VERY BIG questions all at the same time..

Try to get to a public library and look on the shelves for small Amateur Radio Operating books. There may be Amateur Radio Antenna books. Also radio propagation books. Also books for radio learners. You may also find such books in the bigger book shops.

There are English language handbooks with all the answers, obtainable from
-

American Radio Relay League, ARRL HQs in Newington, Connecticut, USA,

Also from Radio Society of Great Britain, RSGB Hqs in Potters Bar, London.

Order a 154.175 crystal (Bomar, ICM, etc). You should not have to realigh the receiver, just net the crystal on freq.

If your single tone is 384.6 or 473.2 (or +/- 2%) you don't need to modify the tap on the inductor or change any caps. You may have to change the inductor and capacitors on the tone filter boards to make it respond to the new tone. There is a chart for closer freqs. in the manual. The inductor is not modifyable.

What's the single tone freq? (I'll tell you if you can use the boards you have right now based on the tone freq. You will end up using only one of them strapped for the "A" tone (the cathode of CR1 goes to EA, not EB). After modifying the board to the appropriate tone freq range, cut the wires going through to the B board then use a 'scope or a true RMS ACVM to tune the core of L1 and/ or C5 to max VAC output from the network (varies for older and newer filter boards).

The dou-tone decoder board is similar to the single tone board, but there is an additional section for the B tone detection.

Here's how to convert the 58-6026 board to a single tone board. Save the parts and go in reverse to un-do the mod:

1) Remove CR-9, R44, C15, Q5, C14, R36 and CR10.
2) Change polarity of CR-8.
3) jumper across where R44 used to be.
4) Change R10 to 3.3M (for timing- leave it alone for quicker detection but that could false the decoder), R9 to 390K

Parts are available through DigiKey or the Shack if you re-use the boards or you can cheat and use the existing receiver with a new Selectone ST120 board strapped for maximum detection delay to decode the single tone.

I may have some junk around from other receivers. Contact me via
e-mail if I can be of further assistance.

73 & Good luck,

Steve

I have a 75 watt, 16 channel, Standard mobile that is programmable. I
have been told it will go to the ham band. 42-50mhz version.

$100.00 and I will ship.

Word in I.S.I.R. is that EUTELSAT has written off the F1 bird after it drowned
in a fire in a testing chamber. During a full power test, a fire of unknown origin
began in the chamber wall spaces(anechoic insulation), the sprinklers tripped
while the s/c was under full power. The effects were rather dramatic.

suspicion is the microwave power beam burned the chamber walls.

at any rate, the s/c is a total loss. as a result, and here's the big news

EUTESLAT has pulled F2 off the Ariane 503 qualification flight, onto a
44L. Leaving open the 503 flight.

Ariane is rapidly hunting for replacement customers, but have three major
options.

1) Amsat Phase 3D.

2) fly F1 as an engineering payload, after stripping what salvagable
parts and re-configuring.

3) Fly marcus lindroos ;-)

No, unfortunately Pat, they do have another option. That is to fly the
Eutelsat dummy mock-up, to verify commercial launch configuration. I

believe that they have stated that is the plan, just in the event that
the actual satellite can't fly.

That would be real good advertising ... ESA flies [another] dummy bird
while dumping on amateur radio operators worldwide, when they could
have flown a REAL working satellite.

I guess the bottom line here is ... if you want to launch a dummy bird
go to ESA ... if you need to launch a "Real" bird go somewhere
else!!!!

Ken,

You and others have programmed for the pro-64. Could you tell me the serial communication protocol for transmitting to the Pro-64.

Thanks in advance,

James

i am interested in hearing some anecdotes concerning emergency communications in which cw was the only viable, available communication mode. please limit the evidence to the past 10 years and to the usa. evidence such as this is the proof in the pudding. the more the better.

fran

the problem is that most people who would love to do HF have no
interest in CW <at least the no coders I know around here>
btw check me in the callbook in a couple of weeks.................not
now as I just show tech +
I HATE code, I will NEVER do it again, and I LIKE saying that. I
decided that I wanted to do some hf, so I went ahead and took the
plunge. Actually I wanted to put a 10 meter split site repeater up
with 2 meter or 430 link frequencies so ALL who want can use it.
I am not a snotty you gotta doit cuz I did kinda guy.
I am a member of the NCI <no code international>
I did code because I had to, not because I want to. I think it sucks,
it is at best moderatly efficient <MANUAL CODE THAT IS> and
it is VERY unappetizing to the new ham. Lets face it, if we don't do
```

something with these bands, they are going to be taken away.

hf, vhf, uhf, shf and light bands need to be utilized for retention.

look at what the code barrier created on 3853, 3894, 3850, 3950,
14.313----and by the way just WHERE IS RAINCOAT CHARLIE??
don't forget to mention the casual redneck who got this here radio
at the hamfest......no call at all

GIMME A BREAK!

let people face their ham radio tenure on thier own. IF they want it,
support them, if they don't support them, don't alienate them

piss me off, and I will flip a bugger on your windshield!

KD5AMZ temporary AG

Well said and good point Rudy.
However you are fighting the "me .. I want it now"
mentality of so many people.

If one were to look at the Northridge Quake, you'd see that the real emergency communications took place on FM voice. However, a lot of critical messages were passed via packet. If you really want to look at real world emergency communications, check out the back issues of QST for their reports of Hams helping out at ...

All modes of radio COULD be used in an emergency; however that's not the real justification for CW. The real reason is that for many, it's fun. OK, I know it's not everyone's "cup of tea", but when the bands have a bad noise problem, CW does a lot better than SSB.

73,
Bob

I've been "lurking" in these newsgroups, reading all the trash about "know code" vs "no code" emotions.

It's real simple.......put yourself into your favorite natural or man-made disaster REGION WIDE scenario, and the start pulling the plug on your computer, your phone lines, your TV, cable service, your cell phone, and of course the rest of your power, water, sewage, garbage pickup.........then soon the police, fire, and ambulance services become overwhelmed.

Now that you're sitting there in the dark, with injured and scared family or friends, WHO YOU GONNA CALL???   YEAH, RIGHT, 911, HAH!!!!

How can you make DAMNED sure you can get a message about you, your family or friends OUT OF THE EFFECTED AREA?

The local VHF/UHF repeater towers are pretzels. The CB bands are full of looters waiting to hear would-be victims calling for help. With all the power line failures, the airwaves have some SERIOUS QRM, so voice communications is all but impossible.

The bottom line is simple physics.......CW is the MOST ROBUST means of long distance communications when all else fails. I don't need fancy computers and software. I don't need repeaters. I don't need TNCs. I need only a simple power source, like a car battery, a radio, a dipole, and a key.

I maintain that THIS is why Ham Radio has a well-deserved reputation for providing disaster communication worldwide. It's because of trained and self-disciplined operators who commit themselves to be prepared to offer their valuable assistance to their affected community. Hell, isn't that a big part of what Field Day is all about?

So, for my money, I say to those who want "instant gratifaction" by dropping code to gain HF privileges...........get proficient in code NOT because the FCC says you need to, but rather because it's smart! Let's not lower another chin-bar so more people can "fall backwards" over it. Instead, let's do our part to help raise more enthusiasts to gain a valuable skill.

Gee, its too bad that you limit this to the last 10 years or I could list:

WW1
WW2
Russian Revolution
Nazi Domination of Europe
Chinese Cultural Revolution
Rape of Nanking
The many nations subjugated by the Japanese before WW2
Natural Disaters of great scale, earthquake, volcanoes, you know, the really big ones that only come along every few centuries
I won't even get into the happenings in Africa

But since these aren't acceptable disasters, I won't mention them. Just what type of disasters can we expect in the next 10 years? BTW, I can go out to my garage and fabricate a CW key in 5 seconds. How long to fabricate an electret mike in your garage? I can build a simple CW transmitter and transmitter from the parts I find in a cast-off radio. Could you make a SSB xcvr out of the same? How did Adm. Stockdale communicate with his fellow prisoners during his 7(?) year vacation at the Hanoi Hilton? It wasn't SSB on 11 meters.

When I was 13 years (in 1966) old Sister Charlotte, K6VFE taught me the code in 6 hours over 3 evenings.

My very fondest regards

On Wed, 1 Jul 1998 23:33:17, dsdock@tiac.net flamed a tech as follows:

> In comp.software.year-2000 cory hamasaki <kiyoinc@ibm.XOUT.net> wrote:
>
> > Yes, -sob-, you got me too. I admit it. I only have an Amateur
> > Advanced ticket.
>
> Stuff it, Cory..
>
> But he's only got a Technician. What does that take, these days?
> Recognizing the difference between Morse Code and Spice Girls?

Someone remind me why we're arguing about Amateur License classes in c.s.y2k? While I do believe that an amateur license and the skills it represents could be invaluable in a Postman, post-Y2K world, I've forgotten why dsdock was flaming Frank.   (there was a 'Ham' in The Postman, the old vet tuning the SSB rig.)

For the non-hams out there, Here are the license classes, the Reqs and the privileges:

Extra
Req: moderately difficult technical exam, 20 wpm Morse.
priv: 1 KW multimode transmitters on all ham freqs.

Advanced
Req: Practical technical exam, 13 wpm Morse
priv: 1 KW multimode transmitters on all ham freqs EXCEPT for 25/50 kHz subbands reserved for Extra class.

General
Slightly easier technical exam than Advanced, 13 wpm Morse
priv: 1 KW multimode transmitters on all ham freq EXCEPT for the 50/100 kHz subbands reserved for Advanced and Extra.

Technician

Same technical exam as General, 5 wpm Morse
priv: 1KW VHF only, some privs on 10 meters

There's also a novice class and a Technician Plus, which is new.

The General class used to be the main class and could operate on all bands. That changed in the 1960s. When the Advanced was created, some thought it was a recreation of the old Class-A ticket, the General was downgraded from full to an 80% full ticket.

Ham bands are 100-200-350 kHz wide. So the subbands at 25/50 kHz are not a big limitation. CW stations using 200-500 Hz filters can operate within a few hundred cycles of each other. Stations running SSB and 2.1 to 2.7 kHz filters usually operate with 2kHz or less spacing. A 100 kHz voice band allows for fifty or more QSOs (conversations).

Note that the main difference between the Technician class and the General class is the 13 wpm v. 5 wpm Morse. Morse is very controversial and flame wars rage on the amateur radio newsgroups.

Here are the facts about Morse. Morse is a language and as such, people over 15-16 years or age have a hard time acquiring it. This is similar to learning a foreign language, playing the violin, ballet, or martial arts. If you don't start young, you'll never be good. Over 20 or so, you'll always be struggling. ...in general, more or less, no hard rules.

I learned Morse at 16, kind-a at the end of the easy to learn age. Morse and me is like a someone who took up ballet at 16; I have a hard time going up against those who started at 10 or 12. But I could operate at 20 wpm and copy in bursts at higher speeds.

Here's a dark secret of Morse, it's the sound that carries the information. Learning Morse isn't memorizing two shorts, a long, and a short is an 'F'. It's hearing the sound d'd'da'd' and thinking 'F' or even better hearing the sound d'd'da'd'-d'da'-da' and thinking 'FAT'. d'd'da'd' like a machine gun; not dit dit dah dit, and definitely NOT short short long short or .._.

It's NOT visual. people used to learn using flashcards and when they copied had to go from the sound to the visual .._. to the pictures of the letters, then they wrote the letters down and only later could read the message. No wonder it was a lot of work.

The second dark secret of Morse is that the sounds should be learned at 30-50 wpm, fast, machine gun bursts of sounds. Taught as common words, CQ, DE, RST, QRT, QSL, QTH, XMTR, WX, 5NN, UR, BT, QUAD, YAGI, sent at 30-50 wpm so that you learn the sounds at a speed that makes operating fun and comfortable. 30-50 wpm Morse lets hams operate at chat-room typing speeds.

If you listen to the CW part of the ham bands, you can hear stations operating at 100+ wpm, at that speed it sounds like bursts of sounds.

They're sending with keyboard keyers, that's too fast for even IAMBIC keyers, and copying by listening, it too fast to write down the words.

Lots and lots of hams are locked into the Technician class because the started too late. 13 wpm is an insurmountable barrier. I was lucky enough to learn before I was too old to learn.

Here's a final dark secret of Ham Radio. The exams are now given by private citizens, some tickets out there, General, Advanced, Extra, are bought or traded for favors.   And no, AH6GI wasn't bought, it was one of those that was taken before a real FCC district examiner in a Federal exam room. (I shouldn't have to make a point of this but c.s.y2k is infested with flamers.)

The 13 wpm sending exam was taken with a straight key, not a bug or electronic keyer. (13-15 wpm is roughly the limit of comfortable straight key sending.) And this was the old exam, where you had to have a consecutive string of 65 letters with no errors out of 5 minutes of copy. The current exam is multiple choice on a QSO and there is no sending.

straight key 5-15 wpm
bugs 10-30 wpm
IAMBIC keyers 10-60 wpm
Keyboard up to 120 wpm

Morse is extremely efficient, almost engineered for the maximal information transfer. There are three layers of absolute 'compression'.

The modulation is modified square waves, shaped to match the information transfer rate and the selectivity of the receiver. You don't see 50 cycle filters because that would slow the keying speed down. 200 and 400 cycle receiver filters match the highest keying speeds that hams use.

The system, transmitter waveform, receiver selectivity, QSK turnover, are matched for 50-100 wpm operation. 500 wpm Morse would require reengineered systems, squarer transmitter rise and decay, wider receivers, and much faster QSK or entire words would be clipped.

The morse characters are, in a sense Hoffmann coded, in that the frequent characters are the shortest. The most common letter in English is 'E', no accident that it is a single dit. 'I' is didit.

Morse operations are all abbreviations, UR RST 5NN BT. Heavy compression.

As great as Morse is, the secret to learning it is the same as learning French or Spanish, start 'em young while their brains can learn the sounds, immerse 'em in the sounds.

So the phrase: "he's only got a Technician" probably means he didn't start as young as I did. It's a meaningless distinction.

Mr. Idiot, what if CW fails ??     Don't include EVERYTHING except CW
for "all communications fail."     Include CW also.

>I maintain that THIS is why Ham Radio has a well-deserved reputation for
>providing disaster communication worldwide.
```

ask your neighbour and they don't know about it. show your CW keyer and punch CW keyers and call CQ. I am sure your neighbour will be impressed !! (grin)

>wiedemann@home.com

and the massive crossposting is the way to illustrate how pro-CWers are stupid.

Yours aren't the examples. Give us the example where ALL VOICE and DIGITAL communications fail ad CW is only the way to transmit your signal.   WW I and WWII aren't the example. You were just banned to use HF spectrum in any matter. Get a life. Think of nuclear war and say know code = know ham = know radio = know emergency.   Think of UFOs and say have guns = have bombs = have protections = have safety.

Remain silent and be thought a fool, open mouth and remove all doubt!

CB--you are an embarrassment to all hard working, modest, Japanese people. Your ideas a poorly thought out, and you articulation of those ideas is even worse!

To hell with you, sir.

Me too.

My thought: Let's really put some substance into the need-for-CW requlations, by requiring yearly recertification of CW skills, at some modest speed of say 10WPM.

OK all you PHONE only inDUHviduals have fun with this idea. But don't expect me to dignifiy your response(s) with an answer. Esp. you [LOSER} Cutie Boy.

Bugger or booger. Flipping a bugger would quite a feat. Most of them dudes
are heavy! Boogers on the others hand are light and easy to flip. I do it
daily.

yep.  I support 50 WPM.  go for it.    destroy ham radio now.  great
job.  good job.   100 WPM ?  of course.   CW will kick the all idiots
out from ham radio eh...  do it.      Leave the freq unusued and "we"
will take YOUR freq.    MAKE MORE STRICT CW REQUIREMENT
NOW!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Better yet, imagine yourself in a National Park or Forest when the disaster occurs, with neither Bic nor matches (both ruined by the disaster). The only way to save yourself and family is to start a fire quickly using flint and steel. It follows that this archaic skill could save your life - therefore everyone who wants to venture into any National Park or Forest should, by law, be required to demonstrate his/her ability to find an appropriate flint and start a fire with flint and steel within one minute. Otherwise, you have no business venturing out of town ... right??

Hello Cory,

The power limit for all license classes except Novice is 1.5 kW peak output.

In a way it was - holders of old Class A licenses got Advanced licenses under the new system. The Class A/B/C system was replaced in 1950. Incentive licensing (restricted band segments on HF) went into effect in November of 1968.

The written tests for the Technician and General used to be the same, but now are different (the General is harder)

I have to disagree. I've known many people of all ages with no code skills who have become excellent operators in a relatiely short time. As a further proof, back when the military services used morse code extensively, many of the radio operators' first experiences with morse code were in radio school, at the age of 19 or older. The military requirements were much tougher than those required for ham radio. In general, I'd say that age is only a very minor factor. I would say, though, that the ability to be a really good highspeed operator (40 wpm+) and the ease with which code can be learned, are dependent on one's talent as well as practice - just like almost any other skill.

>

I learned 5 wpm at age 13, 13 wpm at age 14, and 20 wpm at age 15-16. Now I'm

44, and still learning and improving (35+ wpm?)

Now this part I agree with. We don't learn to talk and listen by learning
letters and how to read - we learn the sounds directly.
>
> The second dark secret of Morse is that the sounds should be learned at

> chat-room typing speeds.

Agree in part. This is called the Farnsworth method of training, but it's
usually more successful if the characters are sent at 20-25 wpm, with lots of
space between characters. Sort of like learning a foreign language by hearing
each word spoken rapidly, with exaggerated pauses between words. It really
works! (for most people)
>

It's possible to learn at any age. I know too many hams who started as
retirees and can do 25+ wpm after a few months.

>

> infested with flamers.)

I've never seen any evidence of dishonesty in any VE (volunteer examiner)
session - but nobody can prove it never ever happens. If it does, it's the
extreme exception, not the rule.

>
> The 13 wpm sending exam was taken with a straight key, not a bug or electronic keyer. (13-15 wpm is roughly the limit of comfortable straight key sending.) And this was the old exam, where you had to have a consecutive string of 65 letters with no errors out of 5 minutes of copy. The current exam is multiple choice on a QSO and there is no sending.

Yep, that's how it was. The receiving test required a solid minute (25, 63 and 100 characters at 5, 13 and 20 wpm respectively). No going back at the end to make corrections - when the code stopped, they took the paper away, and the FCC examiner had to be able to read the characters. They only supplied a straight key for the sending test, regardless of speed, but you could bring a bug or keyer (no keyboards)

>
> straight key 5-15 wpm
> bugs 10-30 wpm
> IAMBIC keyers 10-60 wpm
> Keyboard up to 120 wpm

I'd say the speeds given are a bit low. More like:

straight key 5-25 wpm
bug 10-45 wpm
iambic keyer 10-60+ wpm

>
> Morse is extremely efficient, almost engineered for the maximal information transfer. There are three layers of absolute 'compression'.
>
> The modulation is modified square waves, shaped to match the information transfer rate and the selectivity of the receiver. You don't see 50 cycle filters because that would slow the keying speed down. 200 and 400 cycle receiver filters match the highest keying speeds that hams use.
>
> The system, transmitter waveform, receiver selectivity, QSK turnover, are matched for 50-100 wpm operation. 500 wpm Morse would require reengineered systems, squarer transmitter rise and decay, wider receivers, and much faster QSK or entire words would be clipped.
>
> The morse characters are, in a sense Hoffmann coded, in that the frequent characters are the shortest. The most common letter in English is 'E', no accident that it is a single dit. 'I' is didit.
>
> Morse operations are all abbreviations, UR RST 5NN BT. Heavy compression.

Agree all around.

>
> As great as Morse is, the secret to learning it is the same as learning French or Spanish, start 'em young while their brains can learn the sounds, immerse 'em in the sounds.
>

> So the phrase: "he's only got a Technician" probably means he didn't
> start as young as I did. It's a meaningless distinction.

I agree with the "immerse 'em in sounds" but not the age part. I'd also advise anyone who has a ham license and wants to improve their code skills to get rid of their microphones and spend all of their time operating CW. In the bad old days many of us were forced to do that by economics and our limited license privileges. (That may be why it seems that young folks learn code easier - most teenagers were too "radio-poor" to afford anything other than a simple CW station).

i appreciated the response. unfortunately there was not one within the guidelines.
the incidents that were mentioned were either too old, or out of the geographic constraint, or both. Although the lack of data does not conclusively prove anything, it does hint at the fact that we have entered a technological era in which
we never (or very rarely) utilize the final "most robust" communication mode, cw, in
times of emergency. Don't get me wrong. I think code is fun (still learning though). However, I believe the era of code as a likely final straw has ended. Sure, the occurance of a cw only method emergency communication for the us ham is possible, however it is microscopically probable. Someone has sited the longstanding naval use of cw... well, you neglected to mention that its use in that
context has ended. There is absolutely no doubt that cw deserves a special place in
the annals of human communication history. However, the rationale that i hear for continued cw requirements are pretty weak. in the end, most of these debate down to
an emotional basis. a few of the rationale for pro-code that i have heard are:

1)last resort common mode
2)limits hf licensees
3)essense of a ham
4)makes a better ham
5)keeps out "lids"
6)other

responses:

1.   technically, the robustness and simplicity of cw can not be denied. the commonality is also a powerful argument. however, the fundamental flaw is in the "last resort" qualification. The likelyhood of ever needing the absolutely "last resort" mode for a us ham is pretty darn low. the us govt. has come to the same conclusion as they have dropped cw as the naval last resort.
    for the sake of argument, lets say we are forced to use cw as our last resort. do i really nead to send 20 wpm? or would the necessary data get through at 5wpm. i
submit that any scenario that needs 20wpm for rescue response time arguments is invalid because cw would undoubtedly not be the last viable resort in those cases. now, lets say we have the nuclear, asteroid, or aliens, scenario and cw is all we have... i think even 1 wpm would cut it then. so what is with the 20wpm requirement? i submit it is not about necessity, but something that is a little darker in human nature.

2.   it would seem that the code requirements do in fact limit the number of hf

licenses. however, i submit that many that do take the plunge, learn the code for the test only. given that factoid, i believe the time could be better spent learning more theory, regulations, or operations. perhaps a ham related community service requirement, or so many hours working with an hf licensee or something. bottom line: hf license numbers could be restricted in a number of other, more pertinent ways.

3.   i have only heard this one a few times, but i believe there are more out there
that believe this than one would suspect. my only reponse is, i solute you. i tend
to believe that this was the way it used to be and contrary to current popular disimformation, the change in thinking is not a result of a need for "instant gratification". sure, for some nc's this may be true. however, i believe that most
of them would rather spend the code study time on heavier theory, operations, or regulation test preparation.... something that they believe more pertinent to the modern communication era.

4.   let's face it this is bunk. i hear and see a lot of bitter, self-righteous talk from hf licensed hams. the code apparently did not work for them.

5.   wrong. these people are on every band and can hold any class of license. how
many ham club ex-officers cause trouble on uhf/vhf repeaters?... these people are typically hf licensed... in my experience (thus far).

6.   there are bound to be arguments i missed. let's hear them.

i should say, if i haven't already... i am a nc tech. i am currently learning code
to upgrade my license. i think cw is fun. although i didn't necessarily feel that
way when i started. i also feel that hf phone and cw certification should be separated, as they have little to do with each other.

<HTML>
i appreciated the response.&nbsp; unfortunately there was not <I>one</I>
within the guidelines.&nbsp; the incidents that were mentioned were either
```

too old, or out of the geographic constraint, or both. Although the lack of data does not conclusively prove anything, it does hint at the fact that we have entered a technological era in which we never (or very rarely) utilize the final "most robust" communication mode, cw, in times of emergency. Don't get me wrong. I think code is fun (still learning though). However, I believe the era of code as a likely <I>final straw</I> has ended. Sure, the occurance of a cw only method emergency communication for the us ham is possible, however it is microscopically probable. Someone has sited the longstanding naval use of cw... well, you neglected to mention that its use in that context has ended. There is absolutely no doubt that cw deserves a special place in the annals of human communication history. However, the rationale that i hear for continued cw requirements are pretty weak. in the end, most of these debate down to an emotional basis. a few of the rationale for pro-code that i have heard are:

<P>1)last resort common mode
<BR>2)limits hf licensees
<BR>3)essense of a ham
<BR>4)makes a better ham
<BR>5)keeps out "lids"
<BR>6)other

<P>responses:

<P>1.   technically, the robustness and simplicity of cw can not be denied. the commonality is also a powerful argument. however, the fundamental flaw is in the "last resort" qualification. The likelyhood of ever needing the absolutely "last resort" mode for a us ham is pretty darn low. the us govt. has come to the same conclusion as they have dropped cw as the naval last resort.
<BR>   for the sake of argument, lets say we are forced to use cw as our last resort. do i really nead to send 20 wpm? or would the necessary data get through at 5wpm. i submit that any scenario that needs 20wpm for rescue response time arguments is invalid because cw would undoubtedly not be the last viable resort in those cases. now, lets say we have the nuclear, asteroid, or aliens, scenario and cw is all we have... i think even 1 wpm would cut it then. so what is with the 20wpm requirement? i submit it is not about necessity, but something that is a little darker in human nature.

<P>2.   it would seem that the code requirements do in fact limit the number of hf licenses. however, i submit that many that do take the plunge, learn the code for the test only. given that factoid, i believe the time could be better spent learning more theory, regulations, or operations. perhaps a ham related community service requirement, or so many hours working with an hf licensee or something. bottom line: hf license numbers could be restricted in a number of other, more pertinent ways.

<P>3.   i have only heard this one a few times, but i believe there are more out there that believe this than one would suspect. my only reponse is, i solute you. i tend to believe that this was

```
the way it used to be and contrary to current popular disimformation, the
change in thinking is not a result of a need for "instant gratification".&nbsp;
sure, for some nc's this may be true.&nbsp; however, i believe that most
of them would rather spend the code study time on heavier theory, operations,
or regulation test preparation.... something that they believe more pertinent
to the modern communication era.

<P>4.&nbsp;&nbsp;&nbsp; let's face it this is bunk.&nbsp; i hear and see
a lot of bitter, self-righteous talk from hf licensed hams.&nbsp; the code
apparently did not work for them.

<P>5.&nbsp;&nbsp;&nbsp; wrong.&nbsp; these people are on every band and
can hold any class of license.&nbsp; how many ham club ex-officers cause
trouble on uhf/vhf repeaters?... these people are typically hf licensed...
in my experience (thus far).

<P>6.&nbsp;&nbsp;&nbsp; there are bound to be arguments i missed. let's
hear them.

<P>i should say, if i haven't already... i am a nc tech.&nbsp; i am currently
learning code to upgrade my license.&nbsp; i think cw is fun. although&nbsp;
i didn't necessarily feel that way when i started.&nbsp; i also feel that
hf phone and cw certification should be separated, as they have little
to do with each other.

First of, please remove this discussion from the rec.radio.equipment and rec.radio.amateur.dx news groups. Those news groups are not the place for this discussion and is only causes QRM and bandwidth consumption.

Second, it is correct, Morse Code today is an obsolete form of radio communications when it comes to commercial applications. However amateur radio is a "hobby", not a commercial form of communications. Since Amateur Radio is a hobby, knowing CW is knowing the lowest basic level of radio communications between a human and a machine (transmitter/receiver). It does not take much equipment or money for radio communications to occur between individuals.

There is also lots of tradition here which I think many new comers to the hobby are missing. Tradition has a value to preserve history for generations to come. Most of the older hams who have been around for years can understand what I am saying. There is a fear among the older amateur radio community that if CW is abolished, the art will be lost along with the dinosaurs.

Third, the CW requirement is a hurdle. To get a HF amateur radio license today in the US, the person needs to put out an effort. This takes time and energy, in other words, WORK!

So its my opinion there are only two reasons (a few minor exceptions) why individuals want the code requirement abolished:

1) They have a fear of failure. Taking a test of any kind, including a Morse Code test, frightens people away from wanting to take a risk.

2) Their just plain lazy to make an effort to learn it. They want something for free. This sure sounds like liberalism speaking.

Shucks, why not just give these individuals everything else for free!

(ie: drivers licensee, welfare, Collage education, etc.) It appears the US is turning more and more liberal every day. Abolishment of the CW requirement is yet another example of individuals wanting something for nothing, ak: liberalism.

After all, lots of the stuff you learn in collage today has nothing to do with real world issues. You only learn this obsolete stuff because it makes you think and apply the EFFORT for accomplishment! This is half of what a collage degree is, it proves to society that you can make the effort.

Today when the ARRL takes a pole (vote) to see if the CW requirements should become abolish, the overwhelming voting membership votes in favor to keep the CW requirement. Most ARRL members are the individuals who have their CW requirement license indorsement. The ARRL then takes this voice to the FCC representing the Amateur radio community. The majority of the individuals complaining about having to take a CW test are either not ARRL members, or they are the ones who do not have the CW requirement indorsement.

My suggestion would be if the individuals complaining really want to abolish the CW requirements, those individuals should join the ARRL and become a voting member first. Then when they become the majority, then they can vote to abolish the CW requirement. Debating the issue here on the Internet is fun and entertaining, and stirs up lots of comments and emotions, However all the effort spent here on the intenet from no CW individuals has no baring on the FCC making a ruling.

So until that day comes, I will continue to vote "yes" every time to keep CW as an requirement for the Amateur Radio hobby. I feel its good for the hobby and its good for society not lowing standards every time for a few lazy indivuals!

When is this nocode nonsense going to stop.....Someone joins a hobby and then they want to change it because they can't or won't learn code..... When is this nonsense going to stop? Would you expect golfers to make bigger golf balls because you can't hit the little ones?

There are always people who want the privileges with paying their dues. They want exceptions and special considerations. It is because they are either too lazy or too stupid to do what everyone else does. Give them VHF access without the code, and soon enough they want H.F. access. I not saying there are no idiots or lids out there -- tune up 7.258 sometime. Want to know what the HF bands will be like with no-coders? Tune up 27.035. Next thing they will want access to your station -- because theirs doesn't work as well. And while they are there -- how about a beer. Hey, and what's for dinner?

Some people just con't understand NO!

Cutie Boy doesn't need H.F. access. Give him a 11 meter linear instead.

What is so hard about learning the code? If you have half a brain....................

On December 31, 1997, just hours before the British government ended Morse code monitoring of 500 KHz at shore stations, a freighter in the North Atlantic, the Bahamian M/V Oak, a 13,000 ton freighter carrying a cargo of wood sent an "SOS" using Morse code.

"SOS SOS This is Oak. Position 53 16N 24 50W Stop Engine. We need assistance." The ship was heavy in seas, and the cargo had shifted. She also lost power, and was sinking. The call was answered by a British shore station, and a Royal Air Force "Nimrod" was soon orbiting overhead. The crew abandoned the ship shortly thereafter, and was rescued.

Source: Worldradio Magazine, May 1988. Page 22.

I've read numerous accounts of Morse in action however, this reference was handy.

Kenwood TS-180.
This is the all solid state 10 - 160 ham band only tranciever with
provisions ( but not included ) for any 2 of the WARC bands.
Runs 100 watts and has been a great radio for me the last 4 years.
Has the 250~ cw filter installed. With both Operator and Service Manuals

Also included is the:  PS-180  matching power supply
                       SP-180  matching speaker
                       AT-180  matching tuner
                       MC-50   mic.

All in good condx.   Will ship anywhere in lower 48 ................
$500

YO! Jan, ease up buddy. If we post it your gonna see it right. If
you post, it will come :o) (line from a movie, Field of Dreams, see it
it if you get a chance)

Interesting. You accuse and you name the Bill of Rights. I suspect that
you haven't heard the Court's decision that the First Amendment does NOT

include the right to slander and defame. That, sir, is what you are doing. By your own post, you admit that you do have experience with the software.

My sympathies to the others you flame and revel against. My free speech rights to make a post and an e-mail based on facts is apparently the target of your hate mail. By name calling and insinuation you reveal your true meaning and intention.

Another fine historical quote.

"A man in his twenties who is not a liberal has no heart; a man in
his fifties who is not a conservative has no brain"- Winston Churchill

And I'd drink it, too. (Allusion to a famous Churchill retort.)

this turn is mine,

i thank the gates of earth, for the fine and coherent work done by MICROSOFT Corporation, its employees, and subsidiaries.

i prefer to have one big monopolistic behemoth of a company dishing out the usual stuff, cause then we know who to complain to.

every time someone, some government, some other whining competitor, some greedy lawyer or anybody tries to screw up a well run company like MICROSOFT,   just remember that in 90 percent of the cases, we the consumer have paid MORE after they did it and got LESS in return.

Corel, well, thats just another company that just "aint got it all together!"

they will eventually fail and disappear, hopefully, unless some whining buerocrat with stock or a PAC donation in his pocket tries to "save" the consumers interests !!! ha ah ha!

now i feel better. bye!

>Bob Weiss N2IXK

In the US political lexicon, "Liberal" has come to mean state/corporate control
of the individual for the benefit of a state/corporate agenda. It is a synonym for
Big Brother. This is very different from the classical meaning of the term.

Similarly, in the US political lexicon, "Conservative" has come to mean freedom
from state/corporate control of the individual (except, unfortunately, in matters
of
sex and religion).  Again this is very different from the classical meaning.

In classical terms, a conservative is a defender of the status quo, of the tried
and true, while a liberal is open to new ideas and new ways of dealing with
situations. In that respect, the Founding Fathers were flaming liberals. After
200 years, defenders of the Founding Fathers' ideals are conservatives since
they wish to defend these now tried and true ideas against the encroachments
of the statists.

This inversion of language tends to make these sorts of political namecalling
matches confusing at best. Newspeak rules. Black is white, and white is black.
The modern liberal is really a fascist/communist/statist/corporate manipulator
of the individual while the modern conservative is the defender of individual
liberty and freedom from state/corporate control.

In reality, the state and the corporation are the same sorts of entities. They
are both heirarchical wielders of power, intent on preserving and expanding
their influence, control, and dominance. The satirical press release now
making the rounds which announces that Microsoft has detonated a nuclear
device is not far from the mark. Corporations now do behave as states in
their own right in many ways (though generally not yet to the extent of blatant
use of their own private armed forces, but there have been cases of that).

For one thing...we have no clue who the hell you are since you are
posting from a hotmail address. So please feel free to feel ignored!
I hope someone with more money and more time finds you and sues your
sorry existence. Or even better pays you a visit with Vinnie and Tony.

So in the meantime...take notice that most software companies web
sites list known bugs BECAUSE THEY RESPECT THEIR CUSTOMERS and they
want to keep the support lines open.
All alive humans breathe, and all software has bugs. Period.

You are out of order posting a mental barf like this.
Maybe you are frustrated. maybe you are mental. maybe you are a barf
and nothing else.

Go away and don't waste my time.

Say Hi to Vinnie. (if you see him coming)

D

As succinct and accurate a summary of the issue as I have read...

Nice to see Mr. Coffman's has mastered not only the technical, quantitative side of things, but their political reality, as well.

Yesterday I passed the tech no code exam: I should have my call sign assigned sometime later this week, and I would like to be ready with a good starter radio.

I am going to be spending a lot of time in the Skywarn net, so I would prefer a handheld on 2m, but would also like to experiment with the other bands I have available. Since I will probably be out in the rain, I will need something which is weather resistant, and I personally prefer shock resistant as well. Additionally, I need the set to be able to receive 162.400 - 162.550 MHz (NOAA broadcasts) and (I know I am really pushing things here) it would be nice if it would sound the tone for the NOAA alert tx.

Is there a site available which has comparisons of the different transceivers? I am totally unfamiliar with the various brand names - Yaesu, Kenwood, etc - and have no idea which ones have good products.

I am not asking which is the "best" here - I know that personal preference has a lot to do with it. I am looking for people to tell me what they have and make recommendations, and perhaps direct me to a source for the comparisons.

Thanks,

Albert Clawson, {callsign not yet issued}

If you are usingf the ICOM T8A perhaps you can answer a few question about the rig.
1.Is there an intermod problem
2.Is there a low bat. indicator/PL encoder
3.What are the pros/cons about your experience with the rig
4.How audio xmt/rx quality
5. Would you recommend this radio

After doing a number of searches for software to learn cw and visting a number of sites, I unable to make a decision on which package to purchase. I'd appreciate any recommendations, or recounting of both good and bad expericences with any packages used.

thanks

larry

Franklin lived from 1706 to 1790. He was a publisher, statesman, and scientist. It is surprising you haven't heard of him. He was elected a fellow of the Royal Society for his scientific achievements. Your Willian Pitt said that Franklin ranked with Issac Newton as a scientist.

Besides his work with electricity and the invention of the lightning rod, he invented bifocal glasses, he invented the Franklin stove which is 8 times more efficient than a simple firebox stove, he charted the Gulf Stream, he demonstrated that seas could be calmed by pouring oil on them, etc, etc, etc. He is also the inventor of daylight savings time.

As civic leader, he created the US post office and is responsible for the system of post roads which shaped our roadway development. He started the US public library system, founded the University of Pennsylvania, and served as ambassador to France. As publisher, his Poor Richard's Almanac was the most widely read publication in early America.

Franklin's portrait is on our $100 bill, the only non-president so honored.

Subject: Antenna suggestions
Date: 1998/06/01
Message-ID: <6kvk7e$gdd$1@news.onramp.net>#1/1
X-Deja-AN: 358648195
X-MimeOLE: Produced By Microsoft MimeOLE V4.72.3110.3
Organization: OnRamp, http://www.onramp.net/
Newsgroups: rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.shortwave

I have recently started to get semi-serious about my radio listening again, and want to put up new antennas so I can get better reception. I have a ~45 foot random wire strung in the attic right now, fed off center with basic stranded wire that connects directly to the ANT 2 lead of my Kenwood R-5000. I also recently installed the VC-20 VHF adapter in the radio, so I will also need a VHF antenna.

There are some conditions to the questions. First of all, I am considering getting licensed so I can transmit as well, and want to look ahead so I am not replacing antennas if/when that happens. Secondly, I do not have a ton of space. My house is located in a suburban development, and I have perhaps 120 x 80 feet total on the property. There are no tall trees or stray unused telephone poles to use for supporting an antenna. And finally, my wife will definitely not be keen on the idea of a big ugly antenna cluttering up the skyline of the property. Soooo......

1. What I am considering now is a discone for the VHF bands. The Diamond DX-130J looks like a pretty nice unit, and is supposed to be rated for 200 watts for transmitting. I can get that up on a single mast, like a standard TV antenna, and it won't look remarkably ugly. The question here

it, how far up should it be for the best reception? And, are there any suggestions for an alternative?

2. The HF choice right now looks like the Alpha Delta DX Ultra in an inverted V. Apparently it is pretty decent for multiband reception, but what about transmitting through it? How high should the apex be? I can get it up to 25 or 30 feet pretty easily, but anything higher would be a stretch. How does that compare to a long dipole or windom?

3. I have thought about building a J-pole for the VHF and using a standard dipole for the HF, but I am very interested in getting as much "band power" as I can out of these. After all, I won't be able to put up more than two, and I am interested in listening (and, in future, transmitting) on pretty much everything (160 meters and down). I know I can cut a dipole for a certain frequency band, but how will it perform outside of that band?

4. Regarding supports: how much weight and altitude can I assume is OK for a mast without guying? It would be a real pain to do that on the roof.

5. Regarding convenience: I know that antennas can be built that duplicate the performance of what I have listed above. However, time is worth something as well. How much could I expect to pay to build duplicates of the discone and DX Ultra, assuming I have none of the parts that I need?

Thanks for reading, and any suggestions.

Adam Adkins

I have been unsuccessful in finding out who I bought this interface from, lost the instructions, can't do SSTV 'till I find out which wire is which...if you recognize this or your company made it please let me know where to put the red, green, yellow and black wires.

See at http://www2.netdoor.com/~butchkay/index.html and scroll down page to SSTV interface. You can look around my site while your there, it needs updating desperatly but you might find a new site or two.

Thanks

I'll offer some comments. However, given that antennas tend to be a bit of a religious subject, be aware that opinions may differ.

Nice receiver. I'd recommend going with separate antennas for HF and VHF. While it's theoretically possible to cover both areas with one antenna, I think the performance would be a compromise, and the dimensions of it would be quite out of hand.

> There are some conditions to the questions. First of all, I am considering getting licensed so I can transmit as well, and want to look ahead so I am not replacing antennas if/when that happens. Secondly, I do not have a ton of space. My house is located in a suburban development, and I have perhaps 120 x 80 feet total on the property. Tough luck on not having any trees or unused telephone poles (Stay away from utility lines. Not only are they dangerous, they also can radiate noise that'll mask the signals you're trying to receive.). But, there are alternatives.

You may want to pick up a copy of the ARRL Antenna Book. These have some good practical designs, as well as providing a theoretical basis for antenna design.

Don't be afraid to experiment. Often, you can arrive at an exceptional antenna in a non-conventional configuration. Just remember the safety aspect (Being a crispy critters is no fun!).

You could always trade your wife in on a more approving model. But, given that you may have sentimental reasons for wanting to keep her around, there are other options. There is a class of antennas called "Invisible Antennas" made from light guage wire which is almost impossible to see unless you know to look for it (Please be aware of the dangers of clothes-lining people with it.). Also, it's possible to disguise certain antennas, such as making a vertical antenna look like a flag pole (Or, was that making a flag pole into a vertical antenna?).

> 1. What I am considering now is a discone for the VHF bands. The Diamond DX-130J looks like a pretty nice unit, and is supposed to be rated

>for 200 watts for transmitting. I can get that up on a single mast, like a
>standard TV antenna, and it won't look remarkably ugly. The question here
>it, how far up should it be for the best reception? And, are there any
>suggestions for an alternative?

Discones are known for their broad frequency coverage, and would seem to be an excellent choice for broadband applications. However, one of the trade-offs is that a Discone does not present any gain. If you're interested in weak signal reception on a particular band, you may be better off with an alternate design. Some of the possible alternatives for narrow band work are a yagi, a 5/8-wave vertical, or a phased array. A broad-band alternative would be something like a log-periodic dipole array. Another alternative would be something like a multi-band J-pole configuration (I've seen plans for these as "plumber's specials" made from copper tubing.).

Don't forget to consider the polarization of the signals you're interested in receiving. Most FM VHF communications signals are vertically polarized, but weak-signal SSB and CW VHF signals are typically horizontally polarized (I think VHF FM broadcast signals, as well as broadcast television signals, are horizontally polarized.). There are some antennas while will receive both polarizations (e.g., crossed yagis, 'egg-beater' antennas, etc.), but you're usually better off avoiding these unless you have a good reason for needing them (e.g. LEO satellite communications).

Finally, whatever your choice, don't forget to install a static discharge unit on the feed-line to avoid zapping your radio/yourself in the event of a nearby lightning strike.

As for how high to install it, in general for VHF and UHF signals, the higher the better. Since VHF and UHF signals primarily follow line-of-sight propagation, the high the antenna is, the farther it can hear. However, 30 feet should be plenty adequate for quite a number of miles.

> 2. The HF choice right now looks like the Alpha Delta DX Ultra in an
>inverted V. Apparently it is pretty decent for multiband reception, but
>what about transmitting through it? How high should the apex be? I can get
>it up to 25 or 30 feet pretty easily, but anything higher would be a
>stretch. How does that compare to a long dipole or windom?

Inverted-Vs work quite well (I used one for a number of years.). You may need an antenna tuner for it while transmitting, but these are readily available and not real expensive. Alternatively, you might want to consider alternatives such as a multi-band dipole/inverted-V, or a trap-dipole. Remember that an inverted-V is basically just a dipole that has sagged a bit.

As for how high to install it, again, the higher the better.

However, as long as it's not touching the ground, it will work.

Don't forget the safety aspect here, too. You don't want to clothes-line someone with it, nor do you want someone to be able to grab hold of it while you're transmitting (RF burns are NO FUN AT ALL!)

> 3. I have thought about building a J-pole for the VHF and using a standard dipole for the HF, but I am very interested in getting as much "band power" as I can out of these. After all, I won't be able to put up more than two, and I am interested in listening (and, in future, transmitting) on pretty much everything (160 meters and down). I know I can cut a dipole for a certain frequency band, but how will it perform outside of that band?

You can get a dipole to operate on any frequency band. But, you can also get a wet noodle to work on any frequency band. It's just that the noodle won't work very well. :*)

Seriously, though, the frequencies of the amateur bands tend to be integral frequencies of each other. Thus, if you cut a half-wave dipole for the 80 meter band, you can use it as a 3/2-wave dipole for the 20 meter band. A half-wave dipole for 40 meters will work as a 3/2-wave dipole for the 15 meter band.

You're going to have a bit of a trick, though, getting a half-wave dipole on a 120 by 80 foot lot, since a half-wavelength on the 160 meter band is about 260 feet! You might be able to get decent performance out of a shortened dipole. Or, you might be able to use some combination of a vertical/Inverted L antenna (Be sure to use a good ground system for performance reasons.).

> 4. Regarding supports: how much weight and altitude can I assume is OK for a mast without guying? It would be a real pain to do that on the roof.

That's not an easy question to answer since it depends on what kind of support the mast has at the lower end, as well as the loading imposed by the antenna (and the wind-load), as well as the type of mast used. The main concern is safety; you don't want it coming down and landing on someone's head. Not only is that not good for their head, but it also can damage the antennas.

> 5. Regarding convenience: I know that antennas can be built that duplicate the performance of what I have listed above. However, time is worth something as well. How much could I expect to pay to build duplicates of the discone and DX Ultra, assuming I have none of the parts that I need?

The parts typically are rather inexpensive. So, it really depends on how much you value your time, how good are you with your hands, and what kind of machine resources do you have available. I know some people who think that half the fun of radio is building antennas.

>   Thanks for reading, and any suggestions.

>Adam Adkins
>adam@onramp.net

Good luck with the project, and, above all, have fun. :-)

I have a good working Astron RS-20 power supply that I am not using anymore that I would like to trade for a basic memory keyer AND iambic paddle. A keyer with just 100 character memory would do me fine. Will also sell the RS-20 for cash price of $65 plus UPS shipping from 48449 in Michigan. Please email me if any interest.

Hi there :) I'm an electronic musician seriously looking for old SYNTHESIZERS,KEYBOARDS, drum machines, analog sequencers, vocoders, unusual old effects and all related electronic musical equipment.

In general, I'm looking for working or non-working instruments made in the late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and especially ~PATCHCORDS~:
The more unusual, the better.

_Moog
_ARP
_Roland
_Buchla
_Serge
_Korg
_EML (electrocomp)
_Polyfusion
_EMS (synthi and vcs-3 putney)
_RSF
_Oberheim
_Sequential
_Steiner Parker
_Aries
_Synton
_E-mu

_Electro-Harmonix
_Ionic
_OSCar monosynth
_Roland   _TB-303 Computer-Controlled *Bassline
_Roland   _TR-909 Rhythm_Composer
_Roland   _TR-808 "   "
_Pearl Syncussion SY-1
_ARP   _sequencer
_EML-400 _Electrocomp _sequencer
_Korg _SQ-10 _analog _sequencer
_Simmons SDS5, 6, 7 Drum Brains

If you have any of the above or similar equipment which you'd like to sell,
or know where i could find some, please email me at rolandman1@aol.com
If you'd like to, please include your phone # since my email has occasionally
been unreliable in the past.

Thank you very much for your time and I apologize if this posting annoys
anyone.

Good Evening. I am trying to locate a Manual on a RF Communications (
of the RF Harris group)SB-6FA SSB Tranciever. This is an old Tube type,
"Boat Anchor", that I am trying to restore. The tubes are missing and I
need to find out the numbers for a couple of unmarked sockets. Also
need the hookup for the SB-6FB Antenna Tuner.
Will gladly pay any costs for postage, copying, or purchasing of
manual. Thanks Don KB6GQA. Please respond by email Thanks.

I personally used Super Morse. After trying to learn code on and off for years with tapes and listening to code on my receiver, I finally buckled down and studied with Super Morse. In 3 weeks, I passed my 5 wpm test...I SHOULD have tried for 13 wpm, because while taking my theory tests, I was copying the 13 in my head as it was going on in the background. :)

I am searching for any tube substitutions for a couple of tubes in an old boat anchor. The first is a 7360 and the second is a 6AZ8. If anybody has one of each laying around or know another number that will work for each, I would be most appreciative. Thanks Don KB6GQA

The whole reason rec.radio.amateur.swap was created was to get these

posts out of the other discussion groups. We have a perfectly good
group for swaping - use it.

To everyone else, I recommend not responding to any swap message on a
non swap group. Only when people stop getting results will they stop
doing it.

Before you flame me, think about it for a second - why do we have
rec.radio.amateur.swap?
Of course, maybe the solution is to get rid of the r.r.a.swap as
unnecesary.
If your answer is "use the filtering feature", again I ask why do we
have seperate groups? To sort out discussions by topic. I hope we can
all be reasonable about this.

You left out one resource for this topic: the authors of the programs. :-)

You're talking about the file formats that the load programs want to see. The 64/2041 require a specific data stream that includes the channel, the frequency, and various codes that only GRE's programmers (and maybe their mothers) care about. The load programs just have to get the channel and frequency from the user's file.

LOAD/LOAD64 already take two formats, selected by a command line switch. Bob Miller's WLOAD is automatically flexible about the channel numbers.

Dealing with a file like

```
>Bess Eaton Donut   457.5375    467.7625   Rhode Island
>Big Boy  30.8400    154.5700    UNKNOWN OH area
>    457.6000       467.8250         UNKNOWN OH area
>Burger King  30.840   154.5700   UNKNOWN OH area
>    31.0000    170.3050       UNKNOWN GA area
>           457.5500  467.7750    Baltimore, MD area
```

[snip]

is definitely a chore for something like APFTOOLS. But simple alternates that include an extra comma, or maybe a comment between the channel and frequency, are easy enough to make the LOAD program handle directly. Dirt simple to implement if the user is willing to specify the format via a command line switch. Probably not too hard to have the program recognize stuff automatically, within reason. After all, there are only two data items per line: the channel number and the frequency. And one of those has a decimal point, while the other doesn't.

I encountered another frequency management issue a couple of weeks ago. I use my scanner at car races. On the same weekend I was going to the Indianapolis 500, the CART race in Illinois, and some short track races. I had a CART frequency file by car number, an IRL file by car number, and a short track file. Barely enough time to eat and sleep between races, let alone fire up the laptop.

So I wrote a little utility that would merge the files, adding an offset (I kept IRL as-is, added 200 to CART frequencies, and put Short Track in Bank 10), and also clear all unassigned channels.

If I can get feedback on what file formats people would like to use, I'll be happy to update LOAD to accomodate as much as I can. I'll also clean up my "Multiple Race Series" file merger for general use.

Ahhhhhh, yessss! The BEST resources on the
planet, too, I might add! The exception there is
that most don't know data and databases...or seem
to shy away from it, if they do.

Ahhhhhhh, and I was testing with WLOAD, too. No wonder it doesn't
need channel numbers. So I take it you're saying that the
scanner itself DOES need a channel number and will not assume
one, if it doesn't come across in the data stream? And that
Miller's WLOAD does that part on its own?

Well, that's what a user needs with respect to his own
unique requirements for AutoProgramming....automation for
preparing his frequency databases. And all the better if
he can use the database directly without having to manipulate
it to meet the needs of the specific scanner or interface.

That's the nice thing about the CE-232 Scanner/Computer
Interface and APFTools. Say somebody posts a haphazard list
of frequencies on the newsgroup - all the CE-232 user
has to do is copy the entire message into a text file and
run APFTools on it.....and out comes a perfectly prepared
and organized APF file, ready to go into the scanner.

So apparently, there is a sideline benefit to Miller's
WLOAD for the PRO-64 and PRO-2041 in the sense that his
program is smart enough to know when to stop accepting
superfluous data.....like the ID information that falls
in right after the FREQUENCY data. The scanner and interface
don't need it.....but the user sure does. And it's a pain
in the arse if he has to create separate files, one for

each purpose. It's that kind of thing that diminishes the fun of scanning........

> If I can get feedback on what file formats people would like to use, I'll
> be happy to update LOAD to accomodate as much as I can. I'll also clean
> up my "Multiple Race Series" file merger for general use.

Well, IMHO, anything that allows the user to have a master data file for his own personal purposes and still can be downloaded into the scanner, is....in my books....pretty hot stuff.

Now since there is no such thing as a universal standard for frequency files in form and format, it's not up to you to create one.....but anything you can do to permit a detailed info file to be casually dropped into the PRO-2041/PRO-64 in the blink of an eye would be pretty slick.

Seems it might not be a terrible problem so long as the channel number and frequency got the appropriate emphasis at the beginning of each line. Then LOAD could ignore everything thereafter, right? And since APFTools already exists and can feast on random, chaotic text files and output something mighty close to the needs of the PRO-2041 and PRO-64 as it sits, maybe you could incorporate an APF-file cruncher into LOAD and let it output the requisite data for the scanners.

APF files are consistent; they are useful as is; and they can readily be imported by any database manager and spreadsheet. So basically, the framework is already there, no?

Or, am I missing something? If not, here is the format for APF files for you to look over:

========

An APF file must be a text file with data in the format shown below. The CE-232 AutoProgramer requires the delimiters (commas) to be present. The field sizes given are maximum values. Blank fields can be indicated by adjacent delimiters (eg: ,,125.35,,,,). Each line is limited to a maximum length of 255-chars, including spaces and commas.

Field Reference Labels and format: A,B,C,D,E,F,G=optional fields

A - User Filter field consists of zero to twelve alphameric characters. The AutoProgramming function can be specified to program or not, based on any legal filter. For example, if "government" is a filter, then the AutoProgrammer can select or reject all data lines with "government" in the filter field.

B - Channel Number field consists of zero to three numerals. Leading spaces and zeroes are acceptable, e.g:

```
,32,
, 32,
,032,
```

NOTE: The CE-232 has the option to DISREGARD channel numbers. This is useful because there are times when the listed channel numbers might not be desired. When the user selects this option, channels are AutoProgrammed sequentially.

C - Frequency field; consists of four numerals, decimal, and four numerals. Leading spaces and zeroes are acceptable, e.g:

```
,1234.6755,
, 243.0,
,0243.0000,
,  26.915,
```

D - Mode Field; 0, 2, or 3 chars for wfm, nfm, am NOTE: This field is case sensitive to the CE-232; must be in lower case. We consider this a "bug", and is the only case sensitivity of which we are aware.

E - Delay Set/Unset Field: 0 or 1 char;
blank = delay off; D = delay on

F - LockOut Set/Unset Field: 0 or 1 char;
blank = lockout off; L = lockout on

G - Optional Fields G-Z are not recognized or used by the CE-232, but may be present at the user's discretion.

Examples:

```
government,001,0162.4000,nfm,d,l,NOAA Weather
police,082,158.9700,nfm,,L,San Diego North Dispatch
,,26.915,,,,
,14,97.3,wfm,,,KSON-FM
,002,243.0, am,D,L,mil-air ELT/emergency
```

All five lines are legit APF data lines. The third line is the minimum acceptable to constitute a valid APF line.

For clarity, the above 5-line APF file is shown again below, space delimited to make all the data line up:

```
   A         B      C       D   E  F  G
========== ==== =========  ==== =  =  ========================
FILTER     CHAN    FREQ    MODE D  L  OPTIONAL
========== ==== =========  ==== =  =  ========================
government  001 0162.4000  nfm  d  l  NOAA Weather
    police  082  158.9700  nfm     L  San Diego North Dispatch
                  26.915
             14   97.3     wfm        KSON-FM
            002  243.0      am  D  L  mil-air ELT/emergency
```

=====================

Pretty straightforward, actually. Seems made in the shade
for LOAD and the PRO-2041/PRO-64 by ignoring the 1st, 4th
and subsequent fields.

Right - the scanner needs the channel and frequency. You can see exactly what it wants by looking at Cathy's "print" file or my FRDUMP diagnostic file. If you use the "frequency only" variation of LOAD, the program generates the channel numbers, beginning at 1. Bob's WLOAD goes one better: you can use channel numbers, and if you stop using them it just keeps counting up from the last one.

>program is smart enough to know when to stop accepting
>superfluous data.....like the ID information that falls

Easy enough for the program to ignore information - just use a compiler that's going through its teen-age years. :-)

>APF files are consistent; they are useful as is; and they
>can readily be imported by any database manager and spreadsheet.
>So basically, the framework is already there, no?

Yep. It's a straightforward comma-delimited file. Just need to take the second and third columns. If the channel is blank, then we use Bob's trick of incrementing from the last channel given. If the frequency is blank, that can be taken as zero and the channel cleared.

I should be able to make LOAD automatically recognize APF format and the two that it already does.

Hmmm. Will this count as a "mod" for the program? ;-)

HELP WANTED:

PREMIER Communications, the manufacturer of the popular ADI line of radios and the PRYME/PREMIER line of accessories, currently has immediate job openings in both the sales and technical support roles.

Sales duties include maintaining relations with the PREMIER dealer network over the telephone and through personal visits, and promoting the PREMIER product line by attending various amateur radio shows and conventions.

Technical Support duties include logging in and examining returned merchandise, handling customer's questions on the telephone and by e-mail, and assisting in inventory control and shipping when needed.

Technical background equivalent to a Technician class amateur license is required, as is familiarity with MS Word and Excel. No other experience is needed.

Benefits for both positions include medical and optional dental insurance, as well as room for advancement with an up and coming company in the amateur and land mobile radio business.

The ATAS-100 and FT-847 make a powerful combination for mobile use. The pair is so fun to use that you will want two FT-847's - one for the shack and one for the car! Of course this may cost as much as a small car, but that's not the subject of this post!

What is the subject is the ATAS-100. This little antenna, along with it's associated documentation can be quite a challenge to understand and get working. In fact that's where this started out, because I was having a lot of trouble with mine, and instructions and hints will follow.

First, I rate this antenna highly as a mobile antenna. It is not too big, performs well and has good bandwidth. Since it covers 450 to 7 Mhz its wide band features make it one of the better adjustible coverage antennas on the market. There are others, like the SGC unit, which I also own, that tune faster, but are much larger and do not cover the VHF/UFH bands. Other units include 75 meters but give up the higher frequencies. If you must have 75 then this antenna isn't the way to go. If 75 is a sometimes thing trust me with 450, 2M, 6M, 10M....40M you will find something to do and someone to talk to!

The tuning time for this antenna is a bit slow, especially if you start from fully retracted. It's important to understand the directions when using this antenna and they are not that clear in the sheet or the manual. So here's the basics.

First, when you install the antenna be sure to change the main control menu 31 (tuner) to antenna. At that point your display probably will not show the "tuner" icon.

When you first push the tuner button (left side of rig) the tuner icon should light (upper right side of display). The antenna is probably fully retracted if you just got it out of the box. Now comes the part that is a bit tricky.

The tuner button actually has three functions. The first function, when no icons are visible is to turn on the "tuner" icon and prepare the rig for tuner operation. This enables the second two functions of this button which are always enabled as long as the tuner icon is lit. Read that again if it doesn't make sense.

The second two functions are executed depending upon how long you push the tuner button.

If you make a short push (a dit at 15 WPM) then the antenna will retract. Since the rig doesn't know where the antenna is when you give it this RETRACT command, the "wait" icon will be visible for a period of time that has no relationship to the current length of the antenna - even if it is fully retracted. That means if you tell the antenna to retract the timer starts running, the retract voltage is sent to the ATAS-100 and the antenna retracts. Since the FT-847 knows how long it would take if the antenna were fully extended (CW portion of 40 Meters) it sends the signal for that period of time and shuts off the wait icon.

You can manually stop the antenna from retracting if you wish by pushing the tune button again. This leaves the antenna in an "untuned condition" however and impacts the operation of the second function as explained below.

If you make a long push (a dash at 5 WPM) then the antenna will enter tune mode. This can be VERY confusing though because how tune mode is executed depends upon several things. First, if the antenna was left in an untuned condition IT WILL RETRACT FOR THE FULL TIMEOUT PERIOD (even if it's already fully retracted or close to it when you give the command). When the timeout has occurred, the transmitter will come on in low power mode and the antenna will expand until a good SWR is obtained.

If the antenna was already in a tuned condition (on any band) then it will turn the transmitter on in low power mode and move in the correct direction (up or down) depending on the frequency you moved to. Tuning in this instance is fairly quick. Band to band is just a few seconds.

If the antenna was already in a tuned condition and is still showing low SWR when you give it the tune command (long push, 5 WPM dash) you may not see the transmitter come on because the SWR is checked first and if it's low enough the sequence will be aborted. If you only change frequency a few KC then this is likely to be the case.

If at any time the antenna becomes "untuned" for any reason - like an infirm push of the tune button that results in a short push instead of a long push on the button, it will go through a complete untuned cycle - full retraction and then tune from the bottom up.

After you use the antenna for awhile you will learn to be careful about telling it what you want. A quick push is good shorthand to get you to 2M/70CM as the antenna operates there when fully retracted. It is also nice to get you on 6M because tuning from the retracted position is fast for this band and no carrier is radiated if you reset to compact mode. (The other way to get to 6M from say 40M, tuned, would be to request a tune cycle with a long push of the tune button. This will transmit a carrier while the antenna slowly winds down from fully extended until it gets to resonence. Not too good if you are on a repeater frequency, and not good amateur practice if it can be easily avoided.

Bottom line, you will like the FT-847 and ATAS-100 combination. The only thing it's missing is a slow scan image accessory for the dashboard and a camera, and a packet TNC with APRS. At that point you could send pictures of your location, traffic, accident scene, disaster etc. and you could....well that's coming soon I hope - just like a walkie with SSTV built in - or ATV for that matter!

Wow, is ham radio fun or what!

73,
Len

All,

I have a Drake TR-22C 2-meter transceiver. I'd like to buy crystals for it, but where is a good place to find crystals and what formulae do I need to calculate what crystals I need to have in the receive and transmit slots? Thanks for any help in advance.
Chuck, looking to get my TR-22C online

Yea, making new microphones to replace the CRAP they include with the
rigs!

>Sales duties include maintaining relations with the PREMIER dealer network
>over the telephone and through personal visits, and promoting the PREMIER

Advising people to buy new mic elements from RADIO SHACK to improve
their CRAP mics. (BTW, doesn't help!)

>Technical Support duties include logging in and examining returned

Returned rigs because the audio is CRAP.

>Technical background equivalent to a Technician class amateur license is

Hi. I'm an electronic musician searching for old SYNTHESIZERS, KEYBOARDS, drum machines, analog sequencers, vocoders, unusual old effects and all related electronic musical equipment.

In general, I'm looking for working or broken instruments made in the late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and especially ~PATCHCABLES~:
The more unusual, the better.

_Moog
_ARP
_Roland
_Buchla
_Serge
_Korg
_EML (electrocomp)
_Polyfusion
_EMS (synthi and vcs-3 putney)
_RSF
_Oberheim
_Sequential
_Steiner Parker
_Aries
_Synton
_E-mu
_Electro-Harmonix
_Ionic
_OSCar monosynth

_Roland   _TB-303 Computer-Controlled *Bassline
_Roland   _TR-909 Rhythm_Composer
_Roland   _TR-808 "   "
_Pearl Syncussion SY-1
_ARP   _sequencer
_EML-400 _Electrocomp _sequencer
_Korg _SQ-10 _analog _sequencer
_Simmons SDS5, 6, 7 Drum modules

If you have any of the items listed above or similar equipment which you'd like to sell, or know where i could find some, please email me at rolandman1@aol.com If you'd like, please include your phone number since my email has sometimes been unreliable in the past.

Thank you very much for your time and I apologize if this posting annoys anyone.

Tim,

This is just another example of your campaign of mis-information
and lying here in rec.radio.shortwave.

Your on-going plan is to accuse your opponents of the very tactics
that you have been employing. For example, your claims of
jamming the Liberty Net.

It is *YOU* that jams the Liberty Net. Not the net members that have been there for many years. Your lies may confuse the casual readers, but not anyone that is knowledgeable.

You try to paint a picture of yourself, as an innocent ham, that just happens to be using 3.950 (ie. laying in wait) and then suddenly the evil net members come along and interrupt your political ranting, music playing, and tarzan yells.

What is it that you fear? Why do you continually attempt to disrupt the conversation that occurs on 3.950?

Could it be the dissemination of ideas and opinions that you don't agree with? If these ideas are so offensive to you, why not just change your frequency, and transmit somewhere else?

Only a socialist or a marxist would advocate the censorship of ideas that didn't fall into line with the state. And that's the business you are in, Tim.

Censorship. -- Preventing the free flow of opinions and ideas.

You do this in two ways:

1) By physically preventing the reception of signals xmitted on 3.950
2) By posing as a victim, claiming that you have a 'right' to be there over other hams.

And that's the "Big Lie" that you and your fellow jammers are using. You keep whining about how you're the victim. And you know that sooner or later some percentage of the readers will start to believe you.

The "Big Lie" worked for your idol, Adolph Hitler, and you are hoping that it will work for you.

Does it make sence to notify the Department of Justice about

TIMOTHY W. VOLZ (KK7HO) and
SIDNEY W. MAHAN (K5BLB)
conspiracy to commit murder?

They were recorded on HF the other night in this illegal act. You can hear the evidence of this crime on the web page:

http://pw1.netcom.com/~frg9600/jammers.html

If you havent heard it, Tim is telling Sid that it only takes $500. to get someone killed. Sid then suggests that Vic (W1WCR) as a target.
This is not hearsay, it's a fact and you can hear it on the web page above!

Now that there is hard evidence of their "conspracy to commit murder", who do we notify? Anyone know the correct email addresses? Should we be telling our congressmen about this? It's an election year, and the FCC won't enforce the laws anymore, so we may get more action from them. Tim and Sid are becoming increasingly dangerous, and this recording proves it.

I think this is enough to get these two parasites kicked off of HF, and maybe put in jail where they belong, before they carry out their plan and someone really does get killed!

Attention Fellow Computer Enthusiast:

***** COMPUTER SOFTWARE FRAUD ALERT *****

%%%%%%%%%% COREL SOFTWARE EXPOSED %%%%%%%%%%

HERE�S A TIP TO HELP YOU AVOID SOME FUTURE GRIEF (AND SAVE SOME OF YOUR HARD EARNED MONEY)

PC World Magazine, in their February issue made reference to a particular software title as

�THE SOFTWARE FROM HELL�.

I�ve never used the product they were referring to, so I can�t comment about it.

Nevertheless, if PC World had been talking about software from

COREL CORPORATION (Word Perfect, etc), it would have been MOST APPROPRIATE.

COREL SOFTWARE PRODUCTS, IN ALL THEIR FORMS, TRULY DESERVE THE TITLE

****** SOFTWARE FROM HELL ******

because they are buggy (and dysfunctional) beyond belief. Corel products make Microsoft look like the knight in shinning armor, even including Windoze 95.

YOU CAN�T READ INFO LIKE THIS IN THE COMPUTER MAGAZINES BECAUSE COREL SPENDS FAR TOO MUCH MONEY VIA ADVERTISING REVENUE WITH ALL THE COMPUTER PUBLICATIONS, AND THEY DON�T DARE EXPOSE ONE OF THEIR BIGGEST ADVERTISERS, FOR REASONS WHICH SHOULD BE OBVIOUS. THEREFORE, WE CAN ONLY HOPE TO PASS THE WORD VIA NEWS GROUPS AND SIMILAR OUTLETS.

Corel Corporation, a Canadian firm, based in Ottawa, Ontario, has zero regard and zero respect for their customers, and is probably the best example of why Ziff Davis (publishers of dozens of computer magazines, both on the PC and Mac platforms), are now calling for a mandatory (and legally binding) 30, 60 or 90 day software money back guarantee.

Using data from Corel�s own website, the following is more than sufficient proof to demonstrate the dysfunctional character of Corel�s Word Perfect product:

THE FOLLOWING BUG LIST IS TAKEN FROM COREL�S WORLD WIDE WEBSITE:
==

ftp://ftp.corel.com/pub/WordPerfect/wpmac/-WPMac ftp Index.html

(scroll way down, almost to the bottom)

What follows is the list of bug fixes initiated by Corel in an attempt to repair their cockroach infested product known as Word Perfect, version 3.5, which can easily be construed as a clear admission of bugs which existed with version 3.5 as shipped to customers on CD ROM. What makes this issue all the more criminal is the fact that Corel refused to inform customers who sent in their warranty registration cards that bug fixes had been released for this product. Corel Corporation refused to send warranty/registered customers the patches on floppy disk, and if this was too expensive, Corel Corporation even refused to send registered customers a postcard informing their customers where they could find the patches on the Internet. Customers were simply left to struggle with a totally dysfunctional product. And customers like myself who finally figured out Corel Word Perfect could NOT be made to function properly, and who first requested assistance, were ignored, and who later requested a refund, were also ignored.

TO THIS DAY, 17 MONTHS AFTER THE PURCHASE OF THE DYSFUNCTION AND COCKROACH INFESTED COREL WORD PERFECT PROGRAM, THIS COMPANY CONTINUES TO IGNORE ALL INTERNET E-MAIL MESSGES AND ALL UNITED STATES AND CANADIAN POSTAL SERVICES LETTERS.

==

Corel Document ID: 10339

The information in this document applies to:
WordPerfect 3.5 for Macintosh

This Updater works with all versions of Corel WordPerfect 3.5. Including:

Novell WordPerfect 3.5, Corel WordPerfect 3.5.1, Corel WordPerfect 3.5.2 and Corel WordPerfect in the CorelDraw Suite.

The Corel WordPerfect 3.5.3 patch replaces all previous patches for WordPerfect 3.5, including the Corel WordPerfect 3.5.2 patch shipped in October of 1996.

Fixes in 3.5.3 patch

- Conversions should now function normally under System 7.6.
- A bug was fixed that repairs some display problems.
- Sporadic warnings that the common library could not be found will no longer occur.

Fixes in 3.5.2 patch

- Text Selection now works properly.

- The Print Envelope feature will print addresses in the correct position on the LaserWriter 8.4 printer driver.

- Deleting to the right at the beginning of a line will no longer cause the cursor to reposition incorrectly in the text above.

- Deleting just before a Style no longer causes the cursor to reposition incorrectly and delete text within the Style.

- Editing a document in �Show Codes� no longer causes the cursor to reposition incorrectly.

- Headers/Footers with text attributes (bold, underline...) are no longer affected by text attributes that cross a page break.

- Deleting addresses in the Print Envelope delivery or return address window now functions properly.

- The German Dictionary no longer stops and marks incorrect every word that contains a � (esset).

- The French Dictionary on a Power Macintosh no longer stops and marks incorrect words that contain a � (acute).

- Delivery Point of a bar code is no longer automatically calculated.

- Import of tables from various document types has been improved.

- The title of the �WP6.x Export� now reads �WP6.x,7.x Export� in both the patched and resale CD product from Corel.

- HTML export now saves Corel WordPerfect graphics or .wpg formatted images as JPEG�s.

Fixes in 3.5.1 patch

- Editing some long blocks of Japanese characters will not crash the computer.

- Screen display is faster after scrolling through large documents or tables, or making editing changes.

- Captions can now be positioned above a graphic or text box.

- Return and delivery addresses in Print Envelope will now allow 255 characters (including line breaks).

- Dictionaries are now listed under the Dictionary menu instead of the Check menu.

- Ruler Bar display problems with PCI Power Macintosh computers have been fixed.

- WP 6.x and WP 7.x conversions can now be canceled.

- While working in subdocuments�such as headers or footnotes on black and white screens, Corel WordPerfect does not quit unexpectedly when clicking in the ruler area of the subdocument.

- Zip codes beginning with zero which did not have extended zip code digits now function properly in the Print Envelope feature.

- Font menus in Preferences and Print Envelopes now work properly on small monitors.

- Cleared tabs will no longer unexpectedly reappear on the ruler.

- Hyperlink copy and paste are now working.

- Cell Protection now disables the deletion of the contents of a cell.

- The bottom border of a table which crosses a page break is now visible.

- Patterns in a cell will no longer disappear when performing a Split or Join.

- Joining with the first cell of a table now functions properly.

- Row selection of tables in a text box is now available.

- Scroll bar does not stick when scrolling.

- Corel WordPerfect will use the Language Resource file designed for your system if present, or default to English (USA).

- Page Setup is now enabled in the Print Envelope feature (this allows the selection of paper sizes and envelope trays).

- Changing QuickCorrect preferences with no documents open will no longer crash the computer.

- Tables and Page Borders now work together.

- The PowerTalk Mailer can exceed 4096 characters.

- In the new Corel WordPerfect 3.5 CD-ROM, Norton Utilities will no longer report an error in the WordPerfect Installer Read Me. This fix is not available in the patch, but if you use Norton Utilities, we suggest you delete the WordPerfect Installer Read Me since it is not required for proper operation of the software.

- Corel WordPerfect Dictionaries and QuickCorrect word lists will no longer be replaced during installation.

==

Postscript:

The above represents the bug list for Word Perfect 3.5, as I purchased this product, these revelations coming directly from Corel�s website. Considering all these problems, it is little wonder that Ziff Davis Publishers are now suggesting we have a SOFTWARE LEMON LAW to protect computer consumers from future issues of this sort of software larceny.

If the reader will examine the websites of PC Week, PC World, and a few other leading PC-platform computer magazines, he will discover that Corel's Word Perfect, Suite 8 (the latest offering from Corel) is likewise full of bugs. Don't take my word for it--- check it out for yourself.

MORAL OF STORY::::

SAVE YOUR MONEY--- DO NOT BUY ANYTHING WITH ���COREL��� ON THE LABEL, WHETHER IT BE FOR IBM COMPATIBLES OR THE MACINTOSH !!!

WHO RULES AMERICA?

The Alien Grip on Our News and Entertainment Media Must Be Broken

By the Research Staff of National Vanguard Magazine, PO Box 330,
Hillsboro, West Virginia 24946 USA. FAX#
304-653-4690

http://ww.natall.com

There is no greater power in the world today than that wielded by the manipulators of public opinion in America. No king or pope of old, no conquering general or high priest ever disposed of a power even remotely approaching that of the few dozen men who control America's mass news and entertainment media.

Their power is not distant and impersonal; it reaches into every home in America, and it works its will during nearly every waking hour. It is the power which shapes and molds the mind of virtually every citizen, young or old, rich or poor, simple or sophisticated.

The mass media form for us our image of the world and then tell us what to think about that image. Essentially everything we know -- or think we know -- about events outside our own neighborhood or circle of acquaintances comes to us via our daily newspaper, our weekly news magazine, our radio, or our television.

It is not just the heavy-handed suppression of certain news stories from our newspapers or the blatant propagandizing of history-distorting TV "docudramas" which characterizes the opinion-manipulating techniques of the media masters. They exercise both subtlety and thoroughness in their management of both the news and the entertainment which they present to us.

For example, the way in which the news is covered: which items are emphasized and which are played down, the reporter's choice of words, tone of voice, and facial expressions; the wording of headlines; the choice of illustrations -- all of these things subliminally and yet profoundly affect the way in which we interpret what we see or hear.

On top of this, of course, the columnists and editors remove any remaining doubt from our minds as to just what we are to think about it all. Employing carefully developed psychological techniques, they guide our thought and opinion so that we can be in tune with the "in" crowd, the "beautiful people," the "smart money." They let us know exactly what our attitudes should be toward various types of people and behavior by placing those people or that behavior in the context of a TV drama or situation comedy and having the other TV characters react to them in the Politically Correct way.

Molding American Minds

For example, a racially mixed couple will be respected, liked, and socially sought after by other characters, as will a "take charge" Black scholar or businessman, or a sensitive and talented homosexual, or a poor but honest and hardworking illegal alien from Mexico. On the other hand, a White racist -- that is, any racially conscious White person who looks askance at miscegenation or at the rapidly darkening racial situation in America -- is portrayed, at best, as a despicable bigot who is reviled by the other characters, or, at worst, as a dangerous psychopath who is fascinated by firearms and is a menace to all law-abiding citizens. The White racist "gun nut," in fact, has become a familiar stereotype on TV shows.

The average American, of whose daily life TV-watching takes such an unhealthy portion, distinguishes between these fictional situations and reality only with difficulty, if at all. He responds to the televised actions, statements, and attitudes of TV actors much as he does to his own peers in real life. For all too many Americans the real world has been replaced by the false reality of the TV environment, and it is to this false reality that his urge to conform responds. Thus, when a TV scriptwriter expresses approval of some ideas and actions through the TV characters for whom he is writing, and disapproval of others, he exerts a powerful pressure on millions of viewers toward conformity with his own views.

And as it is with TV entertainment, so it is also with the news, whether televised or printed. The insidious thing about this form of thought control is that even when we realize that entertainment or news is biased, the media masters still are able to manipulate most of us. This is because they not only slant what they present, but they establish tacit boundaries and ground rules for the permissible spectrum of opinion.

As an example, consider the media treatment of Middle East news. Some editors or commentators are slavishly pro-Israel in their every utterance, while others seem nearly neutral. No one, however, dares suggest that the U.S. government is backing the wrong side in the Arab-Jewish conflict and that it served Jewish interests rather than American interests to send U.S. forces to cripple Iraq, Israel's principal rival in the Middle East. Thus, a spectrum of permissible opinion, from pro-Israel to nearly neutral, is established.

Another example is the media treatment of South Africa. Some commentators seem almost dispassionate in reporting the news of racial strife from that country, while in the voices of other commentators there is open hatred of the White South Africans and unrestrained admiration for the Blacks. All of the media spokesmen without exception, however, take the Black side; they differ only in the degree of their partisanship.

Because there are differences in degree, however, most Americans fail to realize that they are being manipulated. Even the citizen who complains about "managed news" falls into the trap of thinking that because he is presented with an apparent spectrum of opinion he can escape the thought controllers' influence by believing the editor or commentator of his choice. It's a "heads I win, tails you lose" situation. Every point on the permissible spectrum of public opinion is acceptable to the media masters -- and no impermissible fact or viewpoint is allowed any exposure at all, if they can prevent it.

The control of the opinion-molding media is monolithic. All of the controlled media -- television, radio, newspapers, magazines, books, motion pictures -- speak with a single voice, each reinforcing the other. Despite the appearance of variety, there is no real dissent, no alternative source of facts or ideas accessible to the great mass of people which might allow them to form opinions at odds with those of the media masters. They are presented with a single view of the world -- a world in which every voice proclaims the equality of the races, the inerrant nature of the Jewish "Holocaust" tale, the wickedness of attempting to halt a flood of non-White aliens from pouring across our borders, the danger of permitting citizens to keep and bear arms, the moral equivalence of all sexual orientations, and the desirability of a "pluralistic," cosmopolitan society rather than a homogeneous one. It is a view of the world designed by the media masters to suit their own ends -- and the pressure to conform to that view is overwhelming. People adapt their opinions to it, vote in accord with it, and shape their lives to fit it.

Television Broadcasting

And who are these all-powerful masters of the media?

For a partial answer, consider television broadcasting, which undoubtedly has become the most powerful medium for determining the way Americans think and behave.

Not counting certain specialized cable news systems, virtually all national and international TV news broadcast in the United States is gathered, filmed, edited, and put on the air by just three companies: American Broadcasting Companies (ABC), Columbia Broadcasting System (CBS), and National Broadcasting Company (NBC). Most televised entertainment programs viewed by Americans are broadcast by the same three networks. Each of these three has been under the absolute control of a single man over a long enough period of time -- ranging from 32 years to 55 years -- for him to staff the corporation at every level with officers of his choosing and thus to place his imprint finally, totally, and indelibly upon it.

In each case that man has been a Jew.

Until 1985, when ABC merged with Capital Cities Communications, Inc., a New York-based media conglomerate, the chairman of the board of directors and chief executive officer (CEO) of the network was Leonard Harry Goldenson, a Jew. He had headed the network since he became president of the predecessor corporation, American Broadcasting-Paramount Theaters, Inc., in 1953. (The name was changed to American Broadcasting Companies, Inc., in 1965.) In an interview published in the April 1, 1985, issue of Newsweek, Goldenson boasted, "I built this company [ABC] from scratch."

Under the 1985 merger terms, Goldenson became chairman of the executive committee of the new company, Capital Cities/ABC, Inc.

Although the chairman and CEO of Capital Cities now is Thomas Murphy, a Gentile, he has made no move to replace the men at ABC who served Goldenson, and the network retains its Jewish character today.

CBS was under the domination of William S. Paley for more than half a century. The son of immigrant Jews from Russia, Paley left the family cigar business in 1928, when he was 27, to buy United Independent Broadcasters for $500,000. He renamed it Columbia Broadcasting System and made himself president. He became chairman of the board in 1946 and held that post until his partial retirement in 1983.

When independent broadcaster Ted Turner, a Gentile, made a bid to buy CBS in 1985, there was panic in media boardrooms across the nation. Turner had made a fortune in advertising and then had built a successful cable-TV news network, CNN. Although Turner employed a number of Jews in key executive positions in CNN and had never taken public positions contrary to Jewish interests, he is a man with a large ego and a strong personality and was regarded by Paley and the other Jews at CBS as uncontrollable: a loose cannon who might at some time in the future turn against them. Furthermore, Jewish newsman Daniel Schorr, who had worked for Turner, publicly charged that his former boss held a personal dislike for Jews.

To block Turner's bid CBS executives invited billionaire Jewish theater, hotel, insurance, and cigarette magnate Laurence Tisch to launch a "friendly" takeover of the company, and since 1986 Tisch has been the chairman and CEO of CBS, removing any threat of non-Jewish influence there.

NBC was formerly a subsidiary of Radio Corporation of America (RCA), which was controlled for 40 years, beginning in 1930, by David Sarnoff, another Jewish immigrant from Russia. When Sarnoff died in 1970 his son Robert took over. In 1986 General Electric Co. merged with RCA, and now NBC is a wholly owned subsidiary of General Electric.

There has been no move by top G-E management to change the Jewish "profile" of NBC or to replace key Jewish personnel. To the contrary, new Jewish executives have been added: examples are Steve Friedman, hired in May 1990 as executive producer of NBC Nightly News and succeeded in January 1993 by Jeff Zuker.

Entertainment Industry

The extraordinary concentration of Jews in the TV industry certainly explains much of the bias of television news. As important as the control of television news programming is, however, television entertainment is even more decisive in determining the way Americans think. Tens of millions of Americans, especially younger ones, never watch network TV news broadcasts, but instead keep their sets tuned to the entertainment programs. And it is in the entertainment field that Jews have maintained the firmest control.

The man in charge of the television entertainment division at CBS is Jeff Sagansky. At ABC the entertainment division is run by two men: Ted Harbert handles the business end of the division, and Stuart Bloomberg is in charge of entertainment programming. Brandon Tartikoff became president of NBC Entertainment in 1980 and held that post for a decade, until he was promoted to chairman in 1990. When he left NBC in July 1991 to take the post of chairman at Paramount Pictures the new president of NBC Entertainment, Warren Littlefield, assumed control.

Sagansky, Bloomberg, and Littlefield pick the programs their networks will broadcast: the game shows, the interview shows, the situation comedies, the historical "docudramas," the family series, the adventure series, the specials. They tell the program developers what they want to see in the programs. They veto anything they don't like. They determine the slant each program will have. They decide just how hard to push various propaganda themes in their network programming: interracial marriage, homosexuality, feminism, gun control, "Holocaust" re-enactments, the menace of "White extremism."

Only one in 36 U.S. citizens (2.8 per cent) is a Jew. But nearly all of the men who shape young Americans' concept of reality, of good and evil, of permissible and impermissible behavior are Jews. In particular, Sagansky and Bloomberg are Jews. So is Tartikoff. Littlefield is the only Gentile who has had a significant role in TV entertainment programming in recent years. This Jewish control of the American entertainment industry and its influence on the American psyche goes far beyond television programming for the major networks;

it also includes virtually everything which comes out of Hollywood's film studios. The May 1990 issue of American Film magazine listed the top 10 (in terms of gross revenues in 1989) U.S. entertainment companies and their CEOs and ranked them by size. They were, in descending order, Time Warner Communications (Steven J. Ross), Walt Disney Co. (Michael D. Eisner), NBC (Robert C. Wright), Paramount Communications (Martin S. Davis), CBS (Laurence A. Tisch), 20th Century Fox Film Corp. (Barry Diller), Columbia Pictures Entertainment (Victor A. Kaufman), Viacom Inc. (Sumner Redstone), Capital Cities/ABC (Thomas S. Murphy), and MCA Inc. (Lew Wasserman). Of the 10 top entertainment CEOs listed above, eight -- Ross, Eisner, Davis, Tisch, Diller, Kaufman, Redstone, and Wasserman -- are Jews. Only two of the top-10 entertainment companies have Gentile CEOs -- NBC and Capital Cities/ABC -- and one of those -- Capital Cities/ABC -- has a Jew in charge of its entertainment division.

There have been a few personnel changes since the 1989 survey, of course. When Japan's Sony Corporation of America bought Columbia Pictures in October 1989, Victor Kaufman was replaced by Peter Guber, also a Jew. Guber's overseer is Sony's vice-chairman Michael P. Schulhof, who arranged the takeover; he is a Jew too. In 1991 MCA was bought by Matsushita, one of Sony's Japanese rivals, but Wasserman remains in his old post. As a general rule, the Japanese are motivated solely by economic interests in their buying of American media, and they leave the propaganda to the Jews. More often than not, in fact, Jews are the brokers of such Japanese media buyouts. Just as Schulhof handled the Sony takeover of Columbia, the Matsushita-MCA deal was arranged by Jewish media magnate Michael Ovitz and Texas-Jewish wheeler-dealer Robert Strauss, later appointed as George Bush's ambassador to Moscow. Steven J. Ross died in December 1992, and now the top post at Time Warner is held by CEO (and chairman) Gerald Levin, also a Jew.

Barry Diller left Fox in February 1992. Rupert Murdoch, owner of News Corporation, Fox's parent company, took a hand in the management of Fox for a few months, but in November 1992 Peter Chernin, formerly head of the Fox Entertainment division, moved up to the top job as chairman of 20th Century Fox Films Corp. Chernin is a Jew. Under him, as president of Fox Entertainment Group since November 1992, is Sandy Grushow, also a Jew.

And Sumner Redstone (born Murray Rothstein) has gained much prominence since 1989, as two of his Viacom subsidiaries, MTV and Nickelodeon, have acquired larger and larger shares of the juvenile television audience. Redstone, who actually owns 76 per cent of the shares of Viacom ($3 billion), is the largest single purveyor of race-mixing propaganda to White teenagers and sub-teens in America and Europe. MTV pumps its racially mixed rock and rap videos into 210 million homes in 71 countries and is the dominant cultural influence on White teenagers around the world. Nickelodeon has by far the largest share of the four-to-11-year-old TV audience in America and also is expanding rapidly into Europe; most of its shows do not yet display the blatant degeneracy which is MTV's trademark, but Redstone is gradually nudging the fare presented to his kiddie viewers toward the same poison purveyed by MTV.

It is difficult to believe that such an overwhelming degree of control of the entertainment industry by Jews came about without a deliberate, concerted effort on their part.

Radio Broadcasting

The "big three" TV networks -- ABC, CBS, and NBC -- not only have a virtual monopoly on commercial network television broadcasting in the United States; they account for most of commercial network radio broadcasting as well -- or they did until recently. For many years their only significant competitor in the latter arena, Mutual Broadcasting System (MBS), with 941 affiliated radio stations (but no TV stations) across the country, was headed by Martin Rubenstein, a Jew. In 1985 Norman J. Pattiz, also a Jew, took over MBS as chairman and CEO. Two years later Pattiz, through his holding company, Westwood One, Inc., bought the NBC Radio Network from General Electric. The MBS and NBC stations together make Pattiz the number-two radio broadcaster in the nation, behind only Capital Cities/ABC. The current MBS vice-president in charge of news broadcasting, Ron Nessen, who formerly held the position of White House press secretary under Gerald Ford, is also a Jew.

Newspapers

After television, daily newspapers are the most influential mass medium in America. Sixty-three million of them are sold (and presumably read) each day. These millions are divided among some 1,640 different publications. One might conclude that the sheer number of different newspapers across America would provide a safeguard against minority control and distortion. Alas, such is not the case. There is less independence, less competition, and much less representation of majority interests than a casual observer would think.

Only 412 (25 per cent) of the 1,640 publications are independently owned; the rest belong to multi-newspaper chains. Only 121 of the total number have circulations of more than 100,000. Only a handful are large enough to maintain independent reporting staffs outside their own communities; the rest must depend on these few for all of their national and international news.

In only 54 cities in America are there more than one daily newspaper, and competition is frequently nominal even among them, as between morning and afternoon editions under the same ownership. Examples of this are the Huntsville, Alabama, morning News and afternoon Times; the Birmingham, Alabama, morning Post Herald and afternoon News; the Mobile, Alabama, morning Register and afternoon Press; the Springfield, Massachusetts, morning Union, afternoon News, and Sunday-only Republican; the Syracuse, New York, morning Post-Standard and afternoon Herald-Journal -- all owned by the Jewish Newhouse brothers through their holding company, Advance Publications.

The Newhouse media empire provides an example of more than the lack of real competition among America's daily newspapers; it also illustrates the insatiable appetite Jews have shown for all the organs of opinion control on which they could fasten their grip. The Newhouses own 31 daily newspapers, including several large and important ones, such as the Cleveland Plain Dealer, the Newark Star-Ledger, and the New Orleans Times-Picayune; the nation's largest trade book publishing conglomerate, Random House, with all its subsidiaries; Newhouse Broadcasting, consisting of 12 television broadcasting stations and 87 cable-TV systems, including some of the country's largest cable networks; the Sunday supplement Parade, with a circulation of more than 22 million copies per week; some two dozen major magazines, including the New Yorker, Vogue, Mademoiselle, Glamour, Vanity Fair, Bride's, Gentlemen's Quarterly, Self, House & Garden, and all the other magazines of the wholly owned Conde Nast group.

This Jewish media empire was founded by the late Samuel Newhouse, an immigrant from Russia. When he died in 1979 at the age of 84, he bequeathed media holdings worth an estimated $1.3 billion to his two sons, Samuel and Donald. With a number of further acquisitions, the net worth of Advance Publications has grown to more than $8 billion today.

The gobbling up of so many newspapers by the Newhouse family was in large degree made possible by the fact that newspapers are not supported by their subscribers, but by their advertisers. It is advertising revenue -- not the small change collected from a newspaper's readers -- that largely pays the editor's salary and yields the owner's profit.

Whenever the large advertisers in a city choose to favor one newspaper over another with their business, the favored newspaper will flourish while its competitor dies. Since the beginning of this century, when Jewish mercantile power in America became a dominant economic force, there has been a steady rise in the number of American newspapers in Jewish hands, accompanied by a steady decline in the number of competing Gentile newspapers -- primarily as a result of selective advertising policies by Jewish merchants.

Furthermore, even those newspapers still under Gentile ownership and management are so thoroughly dependent upon Jewish advertising revenue that their editorial and news reporting policies are largely constrained by Jewish likes and dislikes. It holds true in the newspaper business as elsewhere that he who pays the piper calls the tune.

Three Jewish Newspapers

The suppression of competition and the establishment of local monopolies on the dissemination of news and opinion have characterized the rise of Jewish control over America's newspapers. The resulting ability of the Jews to use the press as an unopposed instrument of Jewish policy could hardly be better illustrated than by the examples of the nation's three most prestigious and influential newspapers: the New York Times, the Wall Street Journal, and the Washington Post. These three, dominating America's financial and political capitals, are the newspapers which set the trends and the guidelines for nearly all the others. They are the ones which decide what is news and what isn't, at the national and international levels. They originate the news; the others merely copy it. And all three newspapers are in Jewish hands.

The New York Times is the unofficial social, fashion, entertainment, political, and cultural guide of the nation. It tells America's "smart set" which books to buy and which films to see; which opinions are in style at the moment; which politicians, educators, spiritual leaders, artists, and businessmen are the real comers. And for a few decades in the last century it was a genuinely American newspaper.

The New York Times was founded in 1851 by two Gentiles, Henry J. Raymond and George Jones. After their deaths, it was purchased in 1896 from Jones's estate by a wealthy Jewish publisher, Adolph Ochs. His great-grandson, Arthur Ochs Sulzberger, Jr., is the paper's current publisher and CEO. The executive editor is Max Frankel, and the managing editor is Joseph Lelyveld. Both are Jews.

The Sulzberger family also owns, through the New York Times Co., 33 other newspapers, including the Boston Globe, purchased in June 1993 for $1.1 billion; twelve magazines, including McCall's and Family Circle with circulations of more than 5 million each; seven radio and TV broadcasting stations; a cable-TV system; and three book publishing companies. The New York Times News Service transmits news stories, features, and photographs from the New York Times by wire to 506 other newspapers, news agencies, and magazines. Of similar national importance is the Washington Post, which, by establishing its "leaks" throughout government agencies in Washington, has an inside track on news involving the Federal government.

The Washington Post, like the New York Times, had a non-Jewish origin. It was established in 1877 by Stilson Hutchins, purchased from him in 1905 by John R. McLean, and later inherited by Edward B. McLean. In June 1933, however, at the height of the Great Depression, the newspaper was forced into bankruptcy. It was purchased at a bankruptcy auction by Eugene Meyer, a Jewish financier and former partner of the infamous Bernard Baruch, industry czar in America during the First World War.

The Washington Post is now run by Katherine Meyer Graham, Eugene Meyer's daughter. She is the principal stockholder and the board chairman of the Washington Post Co. In 1979 she appointed her son Donald publisher of the paper. He now also holds the posts of president and CEO of the Washington Post Co.

The Washington Post Co. has a number of other media holdings in newspapers, television, and magazines, most notably the nation's number-two weekly newsmagazine, Newsweek. The Wall Street Journal, which sells 2.1 million copies each weekday, is the nation's largest-circulation daily newspaper. It is owned by Dow Jones & Co., Inc., a New York corporation which also publishes 24 other daily newspapers and the weekly financial tabloid Barron's, among other things. The chairman and CEO of Dow Jones is Peter R. Kann, who is a Jew. Kann also holds the posts of chairman and publisher of the Wall Street Journal.

New York's other major newspapers are in no better hands than the New York Times and the Wall Street Journal. In January 1993 the New York Daily News was bought from the estate of the late Jewish media mogul Robert Maxwell (born Ludvik Hoch) by Jewish real-estate developer Mortimer B. Zuckerman. The Village Voice is the personal property of Leonard Stern, the billionaire Jewish owner of the Hartz Mountain pet supply firm. The New York Post, suffering from severe financial problems, has been bouncing back and forth for a year among a succession of especially sleazy Jewish billionaires -- Peter Kalikow, Steven Hoffenberg, Abraham Hirshfeld -- and Australian newspaper mogul Rupert Murdoch.

Other Mass Media

The story is pretty much the same for other media as it is for television, radio, and newspapers. Consider, for example, newsmagazines. There are only three of any note published in the United States: Time, Newsweek, and U.S. News & World Report.

Time, with a weekly circulation of 4.1 million, is published by a subsidiary of Time Warner Communications, the new media conglomerate formed by the 1989 merger of Time Inc. with Warner Communications. The CEO of Time Warner Communications, as mentioned above, is Gerald Levin, a Jew.

Newsweek, as mentioned above, is published by the Washington Post Co., under the Jewess Katherine Meyer Graham. Its weekly circulation is 3.2 million.

U.S. News & World Report, with a weekly circulation of 2.3 million, is owned and published by the aforementioned Mortimer B. Zuckerman, who also has taken the position of editor-in-chief of the magazine for himself. Zuckerman also owns the Atlantic Monthly and New York's tabloid newspaper, the Daily News.

Or consider books. There are literally thousands of publishers in the United States, and among these thousands are many with little or no direct Jewish control; there are some which actually dare to publish books not approved by the Jewish Establishment. But all of the latter publishers are very small, and their books seldom reach the great mass of Americans who buy their reading material from drugstore news racks or from the chain bookstores.

Among the giant publishing conglomerates, however, the situation is quite kosher. Three of the six largest book publishers in the United States, according to Publishers Weekly, are owned or controlled by Jews. The three are first-place Random House (with its many subsidiaries, including Crown Publishing Group), third-place Simon & Schuster, and sixth-place Time Warner Trade Group (including Warner Books and Little, Brown).

As pointed out above, the Newhouse family owns Random House, and Gerald Levin is CEO of Time Warner Communications, of which Time Warner Trade Group is a division. Simon & Schuster is a subsidiary of Paramount Communications, Inc. (formerly Gulf and Western, Inc.), of whom the chairman and CEO is Martin S. Davis, as already noted.

Another publisher of special significance is Western Publishing. Although it ranks only 13th in size among all U.S. publishers, it ranks first among publishers of children's books, with more than 50 per cent of the market. Its chairman and CEO is Richard Bernstein, a Jew.

Those are the facts of media control in America. Anyone willing to spend a few hours in a large library looking into current editions of yearbooks on the radio and television industries and into directories of newspapers and magazines; into registers of corporations and their officers, such as those published by Standard and Poors and by Dun and Bradstreet; and into standard biographical reference works can verify their accuracy. They are undeniable, and when confronted with them Jewish spokesmen customarily will use evasive tactics. "Ted Turner isn't a Jew!" they will announce triumphantly, as if that settled the issue. If pressed further they will accuse the confronter of "anti-Semitism" for even raising the subject. It is fear of this accusation which keeps many persons silent who know the facts.

But we must not remain silent on this most important of issues! The Jewish control of the American mass media is the single most important fact of life, not just in America, but in the whole world today. There is nothing -- plague, famine, economic collapse, even nuclear war -- more dangerous to the future of our people.

By permitting the Jews to control our news and entertainment media we are doing more than merely giving them a decisive influence on our political system and virtual control of our government; we also are giving them control of the minds and souls of our children, whose attitudes and ideas are shaped more by Jewish television and Jewish films than by parents, schools, or any other influence.

The Jew-controlled entertainment media have taken the lead in persuading a whole generation that homosexuality is a normal and acceptable way of life; that there is nothing at all wrong with White women dating or marrying Black men, or with White men marrying Asiatic women; that all races are inherently equal in ability and character -- except that the character of the White race is suspect because of a history of oppressing other races; and that any effort by Whites at racial self-preservation is reprehensible.

Our Responsibility

We must oppose the further spreading of this poison among our people, and we must break the power of those who are spreading it. It would be intolerable for such power to be in the hands of any alien minority, with values and interests different from our own. But to permit the Jews, with their 3,000-year history of nation-wrecking, from ancient Egypt to Russia, to hold such power over us is tantamount to race suicide. Indeed, the fact that so many White Americans today are so filled with a sense of racial guilt and self-hatred that they actively seek the death of their own race is a deliberate consequence of Jewish media control.

Once we have absorbed and understood the fact of Jewish media control, it is our inescapable responsibility to do whatever is necessary to break that control. We must shrink from nothing in combatting this evil power which has fastened its deadly grip on our people and is injecting its lethal poison into their minds and souls. If we fail to destroy it, it certainly will destroy our race. Let us begin now to acquire knowledge and take action toward this necessary end.

(Let me take these last few moments to urge you to get the book that is sweeping like wildfire across America, and awakening the American people to their peril. By educating Americans, by getting the truth - the whole truth, not just a watered-down partial truth - into their hands and hearts and minds, we can take back America and make her great, strong, and beautiful once again. Write today for our radio offer Number 4, which is our huge 217-page encyclopedic collection of the best articles from our patriotic newspaper from over a twelve-year period. Just send a contribution of $25 or more to National Vanguard Books, Department R, PO Box 90, Hillsboro WV 24946 USA. Send whatever you can to help this truth-telling program on the air, a minimum of $25 and remember to ask for radio Offer Number 4.)

Look pal, if we wanted to hear this ultra-extreme wacko drivel, we'd just tune in WWCR and WGTG. We all know the media is corrupt and biased, but what you are peddling is assinine by comparison. Good 'ole boy mentality, them communistic Jews are taking over, blah, blah, blah. We couldn't care less. The only newsgroups you posted to are radio hobby related, try posting instead to: alt.bozo.conspiracies, rec.if-I-only-had-a-brain.wackoids and rec.upyers.jewhaters

Sheesh, the crazies are out in force once again folks.

Hi

I have 4 Items for sale. I originally had these items posted as for pickup in the MD area. I changed my mind and am willing to ship these items.

Note: The price for the 830 does not include shipping. I am not sure how much it will cost to ship the 830 but if anybody is interested, I can find out

Here are the items I have left:

Kenwood TS-830S HF Transceiver with Shure Desk Microphone- $500
Ameco Preamplifier for HF through 6 Meters- $75
Kantronics VHF1-60 2 Meter Amplifier- $150
MFJ-1276 TNC- $75

For more information, EMAIL me at keithc@mail.com or call me at (410) 682-3594. If you are in the MD area, I can demonstrate the 830 or anything else to show you that it works.

Thanks,

Keith Calligan

Just goes to prove once again:

Not ALL conservatives are stupid, but an amazing percentage of stupid people are also conservatives!

> There is no greater power in the world today than that wielded by the
> manipulators of public opinion in America. No king or pope of old, no
> conquering general or high priest ever disposed of a power even
> remotely approaching that of the few dozen men who control America's
> mass news and entertainment media.
>
> Their power is not distant and impersonal; it reaches into every home
> in America, and it works its will during nearly every waking hour. It
> is the power which shapes and molds the mind of virtually every

> citizen, young or old, rich or poor, simple or sophisticated.
>
> The mass media form for us our image of the world and then tell us what to think about that image. Essentially everything we know -- or think we know -- about events outside our own neighborhood or circle of acquaintances comes to us via our daily newspaper, our weekly news magazine, our radio, or our television.
>
> It is not just the heavy-handed suppression of certain news stories from our newspapers or the blatant propagandizing of history-distorting TV "docudramas" which characterizes the opinion-manipulating techniques of the media masters. They exercise both subtlety and thoroughness in their management of both the news and the entertainment which they present to us.
>
> For example, the way in which the news is covered: which items are emphasized and which are played down, the reporter's choice of words, tone of voice, and facial expressions; the wording of headlines; the choice of illustrations -- all of these things subliminally and yet profoundly affect the way in which we interpret what we see or hear.
>
> On top of this, of course, the columnists and editors remove any remaining doubt from our minds as to just what we are to think about it all. Employing carefully developed psychological techniques, they guide our thought and opinion so that we can be in tune with the "in" crowd, the "beautiful people," the "smart money." They let us know exactly what our attitudes should be toward various types of people and behavior by placing those people or that behavior in the context of a TV drama or situation comedy and having the other TV characters react to them in the Politically Correct way.
>
> ## Molding American Minds
>
> For example, a racially mixed couple will be respected, liked, and socially sought after by other characters, as will a "take charge" Black scholar or businessman, or a sensitive and talented homosexual, or a poor but honest and hardworking illegal alien from Mexico. On the other hand, a White racist -- that is, any racially conscious White person who looks askance at miscegenation or at the rapidly darkening racial situation in America -- is portrayed, at best, as a despicable bigot who is reviled by the other characters, or, at worst, as a dangerous psychopath who is fascinated by firearms and is a menace to all law-abiding citizens. The White racist "gun nut," in fact, has become a familiar stereotype on TV shows.
>
> The average American, of whose daily life TV-watching takes such an unhealthy portion, distinguishes between these fictional situations and reality only with difficulty, if at all. He responds to the televised actions, statements, and attitudes of TV actors much as he does to his own peers in real life. For all too many Americans the real world has been replaced by the false reality of the TV environment, and it is to this false reality that his urge

> to conform responds. Thus, when a TV scriptwriter expresses approval of some ideas and actions through the TV characters for whom he is writing, and disapproval of others, he exerts a powerful pressure on millions of viewers toward conformity with his own views.
>
> And as it is with TV entertainment, so it is also with the news, whether televised or printed. The insidious thing about this form of thought control is that even when we realize that entertainment or news is biased, the media masters still are able to manipulate most of us. This is because they not only slant what they present, but they establish tacit boundaries and ground rules for the permissible spectrum of opinion.
>
> As an example, consider the media treatment of Middle East news. Some editors or commentators are slavishly pro-Israel in their every utterance, while others seem nearly neutral. No one, however, dares suggest that the U.S. government is backing the wrong side in the Arab-Jewish conflict and that it served Jewish interests rather than American interests to send U.S. forces to cripple Iraq, Israel's principal rival in the Middle East. Thus, a spectrum of permissible opinion, from pro-Israel to nearly neutral, is established.
>
> Another example is the media treatment of South Africa. Some commentators seem almost dispassionate in reporting the news of racial strife from that country, while in the voices of other commentators there is open hatred of the White South Africans and unrestrained admiration for the Blacks. All of the media spokesmen without exception, however, take the Black side; they differ only in the degree of their partisanship.
>
> Because there are differences in degree, however, most Americans fail to realize that they are being manipulated. Even the citizen who complains about "managed news" falls into the trap of thinking that because he is presented with an apparent spectrum of opinion he can escape the thought controllers' influence by believing the editor or commentator of his choice. It's a "heads I win, tails you lose" situation. Every point on the permissible spectrum of public opinion is acceptable to the media masters -- and no impermissible fact or viewpoint is allowed any exposure at all, if they can prevent it.
>
> The control of the opinion-molding media is monolithic. All of the controlled media -- television, radio, newspapers, magazines, books, motion pictures -- speak with a single voice, each reinforcing the other. Despite the appearance of variety, there is no real dissent, no alternative source of facts or ideas accessible to the great mass of people which might allow them to form opinions at odds with those of the media masters. They are presented with a single view of the world -- a world in which every voice proclaims the equality of the races, the inerrant nature of the Jewish "Holocaust" tale, the wickedness of attempting to halt a flood of non-White aliens from pouring across our borders, the danger of permitting citizens to keep and bear arms, the moral equivalence of all sexual orientations, and the desirability of a "pluralistic," cosmopolitan society rather than a homogeneous one.

> It is a view of the world designed by the media masters to suit their own ends -- and the pressure to conform to that view is overwhelming. People adapt their opinions to it, vote in accord with it, and shape their lives to fit it.
>
> ## Television Broadcasting
>
> And who are these all-powerful masters of the media?
>
> For a partial answer, consider television broadcasting, which undoubtedly has become the most powerful medium for determining the way Americans think and behave.
>
> Not counting certain specialized cable news systems, virtually all national and international TV news broadcast in the United States is gathered, filmed, edited, and put on the air by just three companies: American Broadcasting Companies (ABC), Columbia Broadcasting System (CBS), and National Broadcasting Company (NBC). Most televised entertainment programs viewed by Americans are broadcast by the same three networks. Each of these three has been under the absolute control of a single man over a long enough period of time -- ranging from 32 years to 55 years -- for him to staff the corporation at every level with officers of his choosing and thus to place his imprint finally, totally, and indelibly upon it.
>
> In each case that man has been a Jew.
>
> Until 1985, when ABC merged with Capital Cities Communications, Inc., a New York-based media conglomerate, the chairman of the board of directors and chief executive officer (CEO) of the network was Leonard Harry Goldenson, a Jew. He had headed the network since he became president of the predecessor corporation, American Broadcasting-Paramount Theaters, Inc., in 1953. (The name was changed to American Broadcasting Companies, Inc., in 1965.) In an interview published in the April 1, 1985, issue of Newsweek, Goldenson boasted, "I built this company [ABC] from scratch."
>
> Under the 1985 merger terms, Goldenson became chairman of the executive committee of the new company, Capital Cities/ABC, Inc.
>
> Although the chairman and CEO of Capital Cities now is Thomas Murphy, a Gentile, he has made no move to replace the men at ABC who served Goldenson, and the network retains its Jewish character today.
>
> CBS was under the domination of William S. Paley for more than half a century. The son of immigrant Jews from Russia, Paley left the family cigar business in 1928, when he was 27, to buy United Independent Broadcasters for $500,000. He renamed it Columbia Broadcasting System and made himself president. He became chairman of the board in 1946 and held that post until his partial retirement in 1983.
>
> When independent broadcaster Ted Turner, a Gentile, made a bid to buy CBS in 1985, there was panic in media boardrooms across the nation.

> Turner had made a fortune in advertising and then had built a successful cable-TV news network, CNN. Although Turner employed a number of Jews in key executive positions in CNN and had never taken public positions contrary to Jewish interests, he is a man with a large ego and a strong personality and was regarded by Paley and the other Jews at CBS as uncontrollable: a loose cannon who might at some time in the future turn against them. Furthermore, Jewish newsman Daniel Schorr, who had worked for Turner, publicly charged that his former boss held a personal dislike for Jews.
>
> To block Turner's bid CBS executives invited billionaire Jewish theater, hotel, insurance, and cigarette magnate Laurence Tisch to launch a "friendly" takeover of the company, and since 1986 Tisch has been the chairman and CEO of CBS, removing any threat of non-Jewish influence there.
>
> NBC was formerly a subsidiary of Radio Corporation of America (RCA), which was controlled for 40 years, beginning in 1930, by David Sarnoff, another Jewish immigrant from Russia. When Sarnoff died in 1970 his son Robert took over. In 1986 General Electric Co. merged with RCA, and now NBC is a wholly owned subsidiary of General Electric.
>
> There has been no move by top G-E management to change the Jewish "profile" of NBC or to replace key Jewish personnel. To the contrary, new Jewish executives have been added: examples are Steve Friedman, hired in May 1990 as executive producer of NBC Nightly News and succeeded in January 1993 by Jeff Zuker.
>
> ## Entertainment Industry
>
> The extraordinary concentration of Jews in the TV industry certainly explains much of the bias of television news. As important as the control of television news programming is, however, television entertainment is even more decisive in determining the way Americans think. Tens of millions of Americans, especially younger ones, never watch network TV news broadcasts, but instead keep their sets tuned to the entertainment programs. And it is in the entertainment field that Jews have maintained the firmest control.
>
> The man in charge of the television entertainment division at CBS is Jeff Sagansky. At ABC the entertainment division is run by two men: Ted Harbert handles the business end of the division, and Stuart Bloomberg is in charge of entertainment programming. Brandon Tartikoff became president of NBC Entertainment in 1980 and held that post for a decade, until he was promoted to chairman in 1990. When he left NBC in July 1991 to take the post of chairman at Paramount Pictures the new president of NBC Entertainment, Warren Littlefield, assumed control.
>
> Sagansky, Bloomberg, and Littlefield pick the programs their networks will broadcast: the game shows, the interview shows, the situation comedies, the historical "docudramas," the family series, the

> adventure series, the specials. They tell the program developers what they want to see in the programs. They veto anything they don't like. They determine the slant each program will have. They decide just how hard to push various propaganda themes in their network programming: interracial marriage, homosexuality, feminism, gun control, "Holocaust" re-enactments, the menace of "White extremism."
>
> Only one in 36 U.S. citizens (2.8 per cent) is a Jew. But nearly all of the men who shape young Americans' concept of reality, of good and evil, of permissible and impermissible behavior are Jews. In particular, Sagansky and Bloomberg are Jews. So is Tartikoff. Littlefield is the only Gentile who has had a significant role in TV entertainment programming in recent years. This Jewish control of the American entertainment industry and its influence on the American psyche goes far beyond television programming for the major networks; it also includes virtually everything which comes out of Hollywood's film studios. The May 1990 issue of American Film magazine listed the top 10 (in terms of gross revenues in 1989) U.S. entertainment companies and their CEOs and ranked them by size. They were, in descending order, Time Warner Communications (Steven J. Ross), Walt Disney Co. (Michael D. Eisner), NBC (Robert C. Wright), Paramount Communications (Martin S. Davis), CBS (Laurence A. Tisch), 20th Century Fox Film Corp. (Barry Diller), Columbia Pictures Entertainment (Victor A. Kaufman), Viacom Inc. (Sumner Redstone), Capital Cities/ABC (Thomas S. Murphy), and MCA Inc. (Lew Wasserman). Of the 10 top entertainment CEOs listed above, eight -- Ross, Eisner, Davis, Tisch, Diller, Kaufman, Redstone, and Wasserman -- are Jews. Only two of the top-10 entertainment companies have Gentile CEOs -- NBC and Capital Cities/ABC -- and one of those -- Capital Cities/ABC -- has a Jew in charge of its entertainment division.
>
> There have been a few personnel changes since the 1989 survey, of course. When Japan's Sony Corporation of America bought Columbia Pictures in October 1989, Victor Kaufman was replaced by Peter Guber, also a Jew. Guber's overseer is Sony's vice-chairman Michael P. Schulhof, who arranged the takeover; he is a Jew too. In 1991 MCA was bought by Matsushita, one of Sony's Japanese rivals, but Wasserman remains in his old post. As a general rule, the Japanese are motivated solely by economic interests in their buying of American media, and they leave the propaganda to the Jews. More often than not, in fact, Jews are the brokers of such Japanese media buyouts. Just as Schulhof handled the Sony takeover of Columbia, the Matsushita-MCA deal was arranged by Jewish media magnate Michael Ovitz and Texas-Jewish wheeler-dealer Robert Strauss, later appointed as George Bush's ambassador to Moscow. Steven J. Ross died in December 1992, and now the top post at Time Warner is held by CEO (and chairman) Gerald Levin, also a Jew.
>
> Barry Diller left Fox in February 1992. Rupert Murdoch, owner of News Corporation, Fox's parent company, took a hand in the management of Fox for a few months, but in November 1992 Peter Chernin, formerly head of the Fox Entertainment division, moved up to the top job as chairman of 20th Century Fox Films Corp. Chernin is a Jew. Under him,

> as president of Fox Entertainment Group since November 1992, is Sandy Grushow, also a Jew.
>
> And Sumner Redstone (born Murray Rothstein) has gained much prominence since 1989, as two of his Viacom subsidiaries, MTV and Nickelodeon, have acquired larger and larger shares of the juvenile television audience. Redstone, who actually owns 76 per cent of the shares of Viacom ($3 billion), is the largest single purveyor of race-mixing propaganda to White teenagers and sub-teens in America and Europe. MTV pumps its racially mixed rock and rap videos into 210 million homes in 71 countries and is the dominant cultural influence on White teenagers around the world. Nickelodeon has by far the largest share of the four-to-11-year-old TV audience in America and also is expanding rapidly into Europe; most of its shows do not yet display the blatant degeneracy which is MTV's trademark, but Redstone is gradually nudging the fare presented to his kiddie viewers toward the same poison purveyed by MTV.
>
> It is difficult to believe that such an overwhelming degree of control of the entertainment industry by Jews came about without a deliberate, concerted effort on their part.
>
> ## Radio Broadcasting
>
> The "big three" TV networks -- ABC, CBS, and NBC -- not only have a virtual monopoly on commercial network television broadcasting in the United States; they account for most of commercial network radio broadcasting as well -- or they did until recently. For many years their only significant competitor in the latter arena, Mutual Broadcasting System (MBS), with 941 affiliated radio stations (but no TV stations) across the country, was headed by Martin Rubenstein, a Jew. In 1985 Norman J. Pattiz, also a Jew, took over MBS as chairman and CEO. Two years later Pattiz, through his holding company, Westwood One, Inc., bought the NBC Radio Network from General Electric. The MBS and NBC stations together make Pattiz the number-two radio broadcaster in the nation, behind only Capital Cities/ABC. The current MBS vice-president in charge of news broadcasting, Ron Nessen, who formerly held the position of White House press secretary under Gerald Ford, is also a Jew.
>
> ## Newspapers
>
> After television, daily newspapers are the most influential mass medium in America. Sixty-three million of them are sold (and presumably read) each day. These millions are divided among some 1,640 different publications. One might conclude that the sheer number of different newspapers across America would provide a safeguard against minority control and distortion. Alas, such is not the case. There is less independence, less competition, and much less representation of majority interests than a casual observer would think.
>
> Only 412 (25 per cent) of the 1,640 publications are independently owned; the rest belong to multi-newspaper chains. Only 121 of the

> total number have circulations of more than 100,000. Only a handful are large enough to maintain independent reporting staffs outside their own communities; the rest must depend on these few for all of their national and international news.
>
> In only 54 cities in America are there more than one daily newspaper, and competition is frequently nominal even among them, as between morning and afternoon editions under the same ownership. Examples of this are the Huntsville, Alabama, morning News and afternoon Times; the Birmingham, Alabama, morning Post Herald and afternoon News; the Mobile, Alabama, morning Register and afternoon Press; the Springfield, Massachusetts, morning Union, afternoon News, and Sunday-only Republican; the Syracuse, New York, morning Post-Standard and afternoon Herald-Journal -- all owned by the Jewish Newhouse brothers through their holding company, Advance Publications.
>
> The Newhouse media empire provides an example of more than the lack of real competition among America's daily newspapers; it also illustrates the insatiable appetite Jews have shown for all the organs of opinion control on which they could fasten their grip. The Newhouses own 31 daily newspapers, including several large and important ones, such as the Cleveland Plain Dealer, the Newark Star-Ledger, and the New Orleans Times-Picayune; the nation's largest trade book publishing conglomerate, Random House, with all its subsidiaries; Newhouse Broadcasting, consisting of 12 television broadcasting stations and 87 cable-TV systems, including some of the country's largest cable networks; the Sunday supplement Parade, with a circulation of more than 22 million copies per week; some two dozen major magazines, including the New Yorker, Vogue, Mademoiselle, Glamour, Vanity Fair, Bride's, Gentlemen's Quarterly, Self, House & Garden, and all the other magazines of the wholly owned Conde Nast group.
>
> This Jewish media empire was founded by the late Samuel Newhouse, an immigrant from Russia. When he died in 1979 at the age of 84, he bequeathed media holdings worth an estimated $1.3 billion to his two sons, Samuel and Donald. With a number of further acquisitions, the net worth of Advance Publications has grown to more than $8 billion today.
>
> The gobbling up of so many newspapers by the Newhouse family was in large degree made possible by the fact that newspapers are not supported by their subscribers, but by their advertisers. It is advertising revenue -- not the small change collected from a newspaper's readers -- that largely pays the editor's salary and yields the owner's profit.
>
> Whenever the large advertisers in a city choose to favor one newspaper over another with their business, the favored newspaper will flourish while its competitor dies. Since the beginning of this century, when Jewish mercantile power in America became a dominant economic force, there has been a steady rise in the number of American newspapers in Jewish hands, accompanied by a steady decline in the number of competing Gentile newspapers -- primarily as a result of selective

> advertising policies by Jewish merchants.
>
> Furthermore, even those newspapers still under Gentile ownership and management are so thoroughly dependent upon Jewish advertising revenue that their editorial and news reporting policies are largely constrained by Jewish likes and dislikes. It holds true in the newspaper business as elsewhere that he who pays the piper calls the tune.
>
> ## Three Jewish Newspapers
>
> The suppression of competition and the establishment of local monopolies on the dissemination of news and opinion have characterized the rise of Jewish control over America's newspapers. The resulting ability of the Jews to use the press as an unopposed instrument of Jewish policy could hardly be better illustrated than by the examples of the nation's three most prestigious and influential newspapers: the New York Times, the Wall Street Journal, and the Washington Post. These three, dominating America's financial and political capitals, are the newspapers which set the trends and the guidelines for nearly all the others. They are the ones which decide what is news and what isn't, at the national and international levels. They originate the news; the others merely copy it. And all three newspapers are in Jewish hands.
>
> The New York Times is the unofficial social, fashion, entertainment, political, and cultural guide of the nation. It tells America's "smart set" which books to buy and which films to see; which opinions are in style at the moment; which politicians, educators, spiritual leaders, artists, and businessmen are the real comers. And for a few decades in the last century it was a genuinely American newspaper.
>
> The New York Times was founded in 1851 by two Gentiles, Henry J. Raymond and George Jones. After their deaths, it was purchased in 1896 from Jones's estate by a wealthy Jewish publisher, Adolph Ochs. His great-grandson, Arthur Ochs Sulzberger, Jr., is the paper's current publisher and CEO. The executive editor is Max Frankel, and the managing editor is Joseph Lelyveld. Both are Jews.
>
> The Sulzberger family also owns, through the New York Times Co., 33 other newspapers, including the Boston Globe, purchased in June 1993 for $1.1 billion; twelve magazines, including McCall's and Family Circle with circulations of more than 5 million each; seven radio and TV broadcasting stations; a cable-TV system; and three book publishing companies. The New York Times News Service transmits news stories, features, and photographs from the New York Times by wire to 506 other newspapers, news agencies, and magazines. Of similar national importance is the Washington Post, which, by establishing its "leaks" throughout government agencies in Washington, has an inside track on news involving the Federal government.
>
> The Washington Post, like the New York Times, had a non-Jewish origin. It was established in 1877 by Stilson Hutchins, purchased from him in

> 1905 by John R. McLean, and later inherited by Edward B. McLean. In June 1933, however, at the height of the Great Depression, the newspaper was forced into bankruptcy. It was purchased at a bankruptcy auction by Eugene Meyer, a Jewish financier and former partner of the infamous Bernard Baruch, industry czar in America during the First World War.
>
> The Washington Post is now run by Katherine Meyer Graham, Eugene Meyer's daughter. She is the principal stockholder and the board chairman of the Washington Post Co. In 1979 she appointed her son Donald publisher of the paper. He now also holds the posts of president and CEO of the Washington Post Co.
>
> The Washington Post Co. has a number of other media holdings in newspapers, television, and magazines, most notably the nation's number-two weekly newsmagazine, Newsweek. The Wall Street Journal, which sells 2.1 million copies each weekday, is the nation's largest-circulation daily newspaper. It is owned by Dow Jones & Co., Inc., a New York corporation which also publishes 24 other daily newspapers and the weekly financial tabloid Barron's, among other things. The chairman and CEO of Dow Jones is Peter R. Kann, who is a Jew. Kann also holds the posts of chairman and publisher of the Wall Street Journal.
>
> New York's other major newspapers are in no better hands than the New York Times and the Wall Street Journal. In January 1993 the New York Daily News was bought from the estate of the late Jewish media mogul Robert Maxwell (born Ludvik Hoch) by Jewish real-estate developer Mortimer B. Zuckerman. The Village Voice is the personal property of Leonard Stern, the billionaire Jewish owner of the Hartz Mountain pet supply firm. The New York Post, suffering from severe financial problems, has been bouncing back and forth for a year among a succession of especially sleazy Jewish billionaires -- Peter Kalikow, Steven Hoffenberg, Abraham Hirshfeld -- and Australian newspaper mogul Rupert Murdoch.
>
> ## Other Mass Media
>
> The story is pretty much the same for other media as it is for television, radio, and newspapers. Consider, for example, newsmagazines. There are only three of any note published in the United States: Time, Newsweek, and U.S. News & World Report.
>
> Time, with a weekly circulation of 4.1 million, is published by a subsidiary of Time Warner Communications, the new media conglomerate formed by the 1989 merger of Time Inc. with Warner Communications. The CEO of Time Warner Communications, as mentioned above, is Gerald Levin, a Jew.
>
> Newsweek, as mentioned above, is published by the Washington Post Co., under the Jewess Katherine Meyer Graham. Its weekly circulation is 3.2 million.

>
> U.S. News & World Report, with a weekly circulation of 2.3 million, is owned and published by the aforementioned Mortimer B. Zuckerman, who also has taken the position of editor-in-chief of the magazine for himself. Zuckerman also owns the Atlantic Monthly and New York's tabloid newspaper, the Daily News.
>
> Or consider books. There are literally thousands of publishers in the United States, and among these thousands are many with little or no direct Jewish control; there are some which actually dare to publish books not approved by the Jewish Establishment. But all of the latter publishers are very small, and their books seldom reach the great mass of Americans who buy their reading material from drugstore news racks or from the chain bookstores.
>
> Among the giant publishing conglomerates, however, the situation is quite kosher. Three of the six largest book publishers in the United States, according to Publishers Weekly, are owned or controlled by Jews. The three are first-place Random House (with its many subsidiaries, including Crown Publishing Group), third-place Simon & Schuster, and sixth-place Time Warner Trade Group (including Warner Books and Little, Brown).
>
> As pointed out above, the Newhouse family owns Random House, and Gerald Levin is CEO of Time Warner Communications, of which Time Warner Trade Group is a division. Simon & Schuster is a subsidiary of Paramount Communications, Inc. (formerly Gulf and Western, Inc.), of whom the chairman and CEO is Martin S. Davis, as already noted.
>
> Another publisher of special significance is Western Publishing. Although it ranks only 13th in size among all U.S. publishers, it ranks first among publishers of children's books, with more than 50 per cent of the market. Its chairman and CEO is Richard Bernstein, a Jew.
>
> Those are the facts of media control in America. Anyone willing to spend a few hours in a large library looking into current editions of yearbooks on the radio and television industries and into directories of newspapers and magazines; into registers of corporations and their officers, such as those published by Standard and Poors and by Dun and Bradstreet; and into standard biographical reference works can verify their accuracy. They are undeniable, and when confronted with them Jewish spokesmen customarily will use evasive tactics. "Ted Turner isn't a Jew!" they will announce triumphantly, as if that settled the issue. If pressed further they will accuse the confronter of "anti-Semitism" for even raising the subject. It is fear of this accusation which keeps many persons silent who know the facts.
>
> But we must not remain silent on this most important of issues! The Jewish control of the American mass media is the single most important fact of life, not just in America, but in the whole world today. There is nothing -- plague, famine, economic

> collapse, even nuclear war -- more dangerous to the future of our people.
>
> By permitting the Jews to control our news and entertainment media we are doing more than merely giving them a decisive influence on our political system and virtual control of our government; we also are giving them control of the minds and souls of our children, whose attitudes and ideas are shaped more by Jewish television and Jewish films than by parents, schools, or any other influence.
>
> The Jew-controlled entertainment media have taken the lead in persuading a whole generation that homosexuality is a normal and acceptable way of life; that there is nothing at all wrong with White women dating or marrying Black men, or with White men marrying Asiatic women; that all races are inherently equal in ability and character -- except that the character of the White race is suspect because of a history of oppressing other races; and that any effort by Whites at racial self-preservation is reprehensible.
>
> ## Our Responsibility
>
> We must oppose the further spreading of this poison among our people, and we must break the power of those who are spreading it. It would be intolerable for such power to be in the hands of any alien minority, with values and interests different from our own. But to permit the Jews, with their 3,000-year history of nation-wrecking, from ancient Egypt to Russia, to hold such power over us is tantamount to race suicide. Indeed, the fact that so many White Americans today are so filled with a sense of racial guilt and self-hatred that they actively seek the death of their own race is a deliberate consequence of Jewish media control.
>
> Once we have absorbed and understood the fact of Jewish media control, it is our inescapable responsibility to do whatever is necessary to break that control. We must shrink from nothing in combatting this evil power which has fastened its deadly grip on our people and is injecting its lethal poison into their minds and souls. If we fail to destroy it, it certainly will destroy our race. Let us begin now to acquire knowledge and take action toward this necessary end.
>
> (Let me take these last few moments to urge you to get the book that is sweeping like wildfire across America, and awakening the American people to their peril. By educating Americans, by getting the truth - the whole truth, not just a watered-down partial truth - into their hands and hearts and minds, we can take back America and make her great, strong, and beautiful once again. Write today for our radio offer Number 4, which is our huge 217-page encyclopedic collection of the best articles from our patriotic newspaper from over a twelve-year period. Just send a contribution of $25 or more to National Vanguard Books, Department R, PO Box 90, Hillsboro WV 24946 USA. Send whatever you can to help this truth-telling program on the air, a minimum of $25 and remember to ask for radio Offer Number 4.)

Dittos on Poor quality of products they sell!
Their neglected sales person at Dayton may have had better standards
and Quit.
I really hate to see borderline products sold to new hams.
They get frustrated and blame the hobby, Supporting poor quality
radios hurts us all!
The new Hams should not have to learn the hard way.
I am not sure I have the solution.
Honest comments on products offer nice guidelines for most of us.

'Nuff said. Good point Jon. But I do enjoy hearing some
conservative shortwave stations- in the New York A.M. Broadcast
area the press is slanted totally liberal.

I cannot believe you simply state, "Ditto..." to the below illiterate comments from one who probably has a hearing problem.

Do you have any specific, first-hand problems with any of your ADI equipment?

And if so, would you please tell us how you submitted your complaint to ADI,
and exactly how it was handled?

 - Clint Bradford, KE6LCS / KAF3359

About the only refuge for leftists in the NYC media is WBAI-FM (99.5). The rest of it is the standard corporate fare, controlled by the arms merchants and media conglomerates that own the media. Calling GE, Westinghouse, and Walt Disney "liberals" is a joke! The media are only as liberal as the corporations that control the access to the airwaves!

Hi Bob,

What you said can apply to liberals as well.

Just a reminder, one or two morons or racists or criminals or whatever in a large group of people does not mean that the entire group is made up of morons.

Any Moron stupid enough to own a Mac , should get software that sucks , It
your own stupidity to even go out and buy such a machine most software
manufacturers are pulling away from Mac because they are a dying machine.
get a life and buy a real computer !!!

Just a note about problems with IBM machines . Corel does work on them !!!
there maybe bugs in it but I haven't found any yet and I use it every day
ver 5 , 6, 7, and 8.0

Before you shout FRAUD THINK ABOUT SLANDER SUITS THAT CAN ARRISE AGAINST YOU
!!!

I purchased my AT-600HT after looking at a lot of HTs for a long time. I use this radio exclusively for my ARES and SkyWarn and as a backup for my public service work. No ... it is not a Kenwood or an ICOM ... but I didn't spend that kind of money to get it either.

A few comments...
1. The audio is weak, but I usually use an earbud with this radio
2. The manual is a riddle in places, but I have managed to get all functions to work
3. The customer service is superior - I have never been placed on hold and forgotten and my questions have been answered

In the Bang / Buck division I feel this radio is a superior buy.

Too weak. I say good thing about AT-600
(http://www.radiotelephone.net/amateur/at600.htm) but the audio is
not something you want to get it from this HT. You cannot
technically hear anything in the busy streets. I also realize that
the tone of the audio is too high.

>2. The manual is a riddle in places, but I have managed to get all functions
>to work

this HT has lots of features that you don't see with same $$.

>3. The customer service is superior - I have never been placed on hold and
>forgotten and my questions have been answered

seems ADI released PC programmable software. it's nice if they
provide it with AT-600 in near future.

Attention Fellow Computer Enthusiast:

***** COMPUTER SOFTWARE FRAUD ALERT *****

%%%%%%%%%% COREL SOFTWARE EXPOSED %%%%%%%%%%

HERE�S A TIP TO HELP YOU AVOID SOME FUTURE GRIEF (AND SAVE SOME OF YOUR HARD EARNED MONEY)

PC World Magazine, in their February issue made reference to a particular software title as

�THE SOFTWARE FROM HELL�.

I�ve never used the product they were referring to, so I can�t comment about it.

Nevertheless, if PC World had been talking about software from

COREL CORPORATION (Word Perfect, etc), it would have been MOST APPROPRIATE.

COREL SOFTWARE PRODUCTS, IN ALL THEIR FORMS, TRULY DESERVE THE TITLE

****** SOFTWARE FROM HELL ******

because they are buggy (and dysfunctional) beyond belief. Corel products make Microsoft look like the knight in shinning armor, even including Windoze 95.

YOU CAN�T READ INFO LIKE THIS IN THE COMPUTER MAGAZINES BECAUSE COREL SPENDS FAR TOO MUCH MONEY VIA ADVERTISING REVENUE WITH ALL THE COMPUTER PUBLICATIONS, AND THEY DON�T DARE EXPOSE ONE OF THEIR BIGGEST ADVERTISERS, FOR REASONS WHICH SHOULD BE OBVIOUS. THEREFORE, WE CAN ONLY HOPE TO PASS THE WORD VIA NEWS GROUPS AND SIMILAR OUTLETS.

Corel Corporation, a Canadian firm, based in Ottawa, Ontario, has zero regard and zero respect for their customers, and is probably the best example of why Ziff Davis (publishers of dozens of computer magazines, both on the PC and Mac platforms), are now calling for a mandatory (and legally binding) 30, 60 or 90 day software money back guarantee.

Using data from Corel�s own website, the following is more than sufficient proof to demonstrate the dysfunctional character of Corel�s Word Perfect product:

THE FOLLOWING BUG LIST IS TAKEN FROM COREL�S WORLD WIDE WEBSITE:
==

ftp://ftp.corel.com/pub/WordPerfect/wpmac/-WPMac ftp Index.html

(scroll way down, almost to the bottom)

What follows is the list of bug fixes initiated by Corel in an attempt to repair their cockroach infested product known as Word Perfect, version 3.5, which can easily be construed as a clear admission of bugs which existed with version 3.5 as shipped to customers on CD ROM. What makes this issue all the more criminal is the fact that Corel refused to inform customers who sent in their warranty registration cards that bug fixes had been released for this product. Corel Corporation refused to send warranty/registered customers the patches on floppy disk, and if this was too expensive, Corel Corporation even refused to send registered customers a postcard informing their customers where they could find the patches on the Internet. Customers were simply left to struggle with a totally dysfunctional product. And customers like myself who finally figured out

Corel Word Perfect could NOT be made to function properly, and who first requested assistance, were ignored, and who later requested a refund, were also ignored.

TO THIS DAY, 17 MONTHS AFTER THE PURCHASE OF THE DYSFUNCTION AND COCKROACH INFESTED COREL WORD PERFECT PROGRAM, THIS COMPANY CONTINUES TO IGNORE ALL INTERNET E-MAIL MESSGES AND ALL UNITED STATES AND CANADIAN POSTAL SERVICES LETTERS.

===

Corel Document ID: 10339

The information in this document applies to:
WordPerfect 3.5 for Macintosh

This Updater works with all versions of Corel WordPerfect 3.5. Including: Novell WordPerfect 3.5, Corel WordPerfect 3.5.1, Corel WordPerfect 3.5.2 and Corel WordPerfect in the CorelDraw Suite.

The Corel WordPerfect 3.5.3 patch replaces all previous patches for WordPerfect 3.5, including the Corel WordPerfect 3.5.2 patch shipped in October of 1996.

Fixes in 3.5.3 patch
======================

- Conversions should now function normally under System 7.6.
- A bug was fixed that repairs some display problems.
- Sporadic warnings that the common library could not be found will no longer occur.

Fixes in 3.5.2 patch
=====================

- Text Selection now works properly.

- The Print Envelope feature will print addresses in the correct position on the LaserWriter 8.4 printer driver.

- Deleting to the right at the beginning of a line will no longer cause the cursor to reposition incorrectly in the text above.

- Deleting just before a Style no longer causes the cursor to reposition incorrectly and delete text within the Style.

- Editing a document in �Show Codes� no longer causes the cursor to reposition incorrectly.

- Headers/Footers with text attributes (bold, underline...) are no longer affected by text attributes that cross a page break.

- Deleting addresses in the Print Envelope delivery or return address window now functions properly.

- The German Dictionary no longer stops and marks incorrect every word that contains a � (esset).

- The French Dictionary on a Power Macintosh no longer stops and marks incorrect words that contain a � (acute).

- Delivery Point of a bar code is no longer automatically calculated.

- Import of tables from various document types has been improved.

- The title of the �WP6.x Export� now reads �WP6.x,7.x Export� in both the patched and resale CD product from Corel.

- HTML export now saves Corel WordPerfect graphics or .wpg formatted images as JPEG�s.

Fixes in 3.5.1 patch

- Editing some long blocks of Japanese characters will not crash the computer.

- Screen display is faster after scrolling through large documents or tables, or making editing changes.

- Captions can now be positioned above a graphic or text box.

- Return and delivery addresses in Print Envelope will now allow 255 characters (including line breaks).

- Dictionaries are now listed under the Dictionary menu instead of the Check menu.

- Ruler Bar display problems with PCI Power Macintosh computers have been fixed.

- WP 6.x and WP 7.x conversions can now be canceled.

- While working in subdocuments�such as headers or footnotes on black and white screens, Corel WordPerfect does not quit unexpectedly when clicking in the ruler area of the subdocument.

- Zip codes beginning with zero which did not have extended zip code digits now function properly in the Print Envelope feature.

- Font menus in Preferences and Print Envelopes now work properly on small monitors.

- Cleared tabs will no longer unexpectedly reappear on the ruler.

- Hyperlink copy and paste are now working.

- Cell Protection now disables the deletion of the contents of a cell.

- The bottom border of a table which crosses a page break is now visible.

- Patterns in a cell will no longer disappear when performing a Split or Join.

- Joining with the first cell of a table now functions properly.

- Row selection of tables in a text box is now available.

- Scroll bar does not stick when scrolling.

- Corel WordPerfect will use the Language Resource file designed for your system if present, or default to English (USA).

- Page Setup is now enabled in the Print Envelope feature (this allows the selection of paper sizes and envelope trays).

- Changing QuickCorrect preferences with no documents open will no longer crash the computer.

- Tables and Page Borders now work together.

- The PowerTalk Mailer can exceed 4096 characters.

- In the new Corel WordPerfect 3.5 CD-ROM, Norton Utilities will no longer report an error in the WordPerfect Installer Read Me. This fix is not available in the patch, but if you use Norton Utilities, we suggest you delete the WordPerfect Installer Read Me since it is not required for proper operation of the software.

- Corel WordPerfect Dictionaries and QuickCorrect word lists will no longer be replaced during installation.

==

Postscript:

The above represents the bug list for Word Perfect 3.5, as I purchased this product, these revelations coming directly from Corel�s website. Considering all these problems, it is little wonder that Ziff Davis Publishers are now suggesting we have a SOFTWARE LEMON LAW to protect computer consumers from future issues of this sort of software larceny.

If the reader will examine the websites of PC Week, PC World, and a few other leading PC-platform computer magazines, he will discover that Corel's Word Perfect, Suite 8 (the latest offering from Corel) is likewise full of bugs. Don't take my word for it--- check it out for yourself.

MORAL OF STORY::::

SAVE YOUR MONEY--- DO NOT BUY ANYTHING WITH ���COREL��� ON THE LABEL, WHETHER IT BE FOR IBM COMPATIBLES OR THE MACINTOSH !!!

What an absurdity to forward this round the world.
Are you able to bring at my doorsteps??
Or os you knowledge of geography al little behind??

What a silly rant, buttressed by the PC (politically correct) Ziff-Davis marketing machine.

If you are going to use a Mac, why not make asute choices regarding what applications function well on it? Many do the WP job emminently on a Mac.

I've been using WPWIN 6.0 & 6.1 for a long time in pers & biz, done all manner of DTP with it, selling several millions in R/E with its ease of producing excellent flyers & brochures beyond the far more costly R/E software. It is a powerhouse product that has more OPERABLE features than anyone can learn in four years (or needs). Support has always been shitty - and it is everywhere unless it's at $24.99 per call - and Micro$loth is surely no better; even their website knowledge base is inferior to their old BBS.

The only beef I've had with WP it it's gargantuan size and resource-hogging - but look at MS Word, a big dog if there ever was one, woth far less to offer (I run it as well - as little as possible).

You'd think someone into the hands-on & tech know-how to mess with BA's would be away from the dumbed-down Mac & Windoze OS's, and into unix, with which you actually control your own box (and have to know something).

Boy, this submitter REALLY helped me fix boatanchors, yes?

Al,

1. No intermod problems noticed.
2. No low battery indicator that I've noticed.
3. Like the radio. Works well, small, solid package, and great as an FM BC RX - much better than the Yeasu radios.
4. It actually has some fidelity.
5. Yes

73,
Len

Hello,

Thanks for responding to our Press Release. We our excited to announce the all new 1998 line of Ham Radio Repeater Directories. They can be found at...

http://www.rotd.com/worldxn/

These exciting directories are great for Amateurs on the move, or those who would like to take advantage of the many Repeaters in

their Area. We encourage you to visit our site and would appreciate any feedback you offer.

Hello all loyal followers of the Batwing Laboratories site!

Just thought we'd let you know that effective June 5 we now have a mailing address.

Feel free to send donations of all shapes and sizes (and denominations if you see fit :)) to the following address:

Batwing Laboratories
Suite 141-347
6200 McKay Avenue
Burnaby, BC V5H 4M9
CANADA

PS We've been way too busy updating the page lately, so come by and check things out at:

http://www.psychonet.net/~batlabs

for all your Motorola 2-way hacking/modification tips and tricks.

If you want to email us, reply by removing the usual from the address...

Bat

This garbage IS spam.

Do you think you can buy sell, trade or swap using using the swap group?
Don't hold your breath.

As to your queries; "I ask why do we have seperate groups", I respond what
does it matter? If it is so repulsive and reprehensible, don't get on the
groups!
It is not a mandatory thing. Please go rinse the starch out of your
shorts, or
perhaps it is better said, "Don't get your panties in a bunch!"

Cheers! May you have a bad day.........

Say, how hard is it to re-freq. an old single channel MT500 VHF?? Either
146.970 minus split or 151.625 simplex. It appears to have a channel element
instead of the regular crystal setup. Ideas?? email please!
thanks,
Randy

Looking for inexpensive memory keyer and set of Iambic paddles. Keyer need only have 100 character memory and physical condition not important as long as it works good. Also looking for inexpensive set of iambic paddles, old Hamkey or beat up Bencher would be fine, again physical appearance not important as long as they work ok. Please email me with what you have and your asking price.

Does anyone have any idea how long it usually takes Mr. Lacy to forward registration codes for these programs? I registered with Getsoftware three days ago and have heard nothing from anyone about reg. codes. I am eager to get started, and the delay is somewhat distressing.

Thanks!

Well, near new... it was up literally about 1 hour before my backyard
neighbor demanded that I take it down as it didn't conform to our CC&Rs.
My loss, your gain.

Best offer, it's packed up and in it's original packaging material.
Write me directly at jerryb@cts.com as I seldom make it to these
newsgroups.

Concur. Very well put. 200 years ago, those who supported the notion that all men should be equal before the law, regardless of birth, and that freedom means freedom from excessive government, were liberals.

Today, those who still believe that America should adhere to the above principles are conservatives.

I guess since I oppose a Morse Code testing requirement, that makes me a liberal. God... !

I thought that the U.S. was a free country! In Quebec, we don't have that
kind of problem. If your neighbour doesn't like your antenna, he only has to
look elsewhere. You could fix some bird houses to the antenna and say it is
a support of some kind. Good luck.

Newsgroups: rec.radio.amateur.misc,rec.radio.amateur

Hello,

I am always looking for some nice girls to talk to on the air. Are there any single YL's ages 17-25 anywhere on HF? I can't seem to find them on 2-Meters either.

If anyone knows of any single YL's anywhere in the USA who operate either 2-Meters or HF regularly, please e-mail me with their callsigns. Preferably ones with General Class or higher. I will be willing to travel almost anywhere in the USA to date a girl who is a licensed ham.

My name is Jeff and call is KC8GRP (Livonia, Michigan).

I haven't had a girlfriend in 2 and a half years, and only about 5 dates since my last girlfriend.

I would like to arrange a QSO with any YL in the USA either on phone or CW.

73's,
Jeff

Hello,

I have drastically updated my homepage, and I have a separate page for ham radio, and another page for bluegrass music. Please take a look at them when you get a chance.

Thanks and 73's,
Jeff

Hi Jerry OM,
  Sorry to hear your plight with the Conformist Nazis.  I now regularly
see real estate flyers with "NO CC&R's" prominently posted on the sheet,
as an added plus for the buyer.  Maybe, slowly, things are a-changin',
as more people become disgusted with signing over their property rights
to their neighbors for zero cost.   Never did like Communism...

73 and GL on the new QTH!

  Don, W6JL

Hi, I need repeater Frequencies for a trip from Sundance WY to Dayton/Cincinnati Oh via i90, i29, i680, i80, i74, i70, i75. Main cities on route are Rapid City SD, Sioux Falls SD, Council Bluffs IA, Des Moines IA, Davenport IA, Peoria IL, Indianapolis IN, Dayton OH, Cincinnati OH,

I have a Alinco DJ-580 dual bander with a magmount ant that I'm using for the trip. I'm only interested in open/no fee repeaters. State links and wide area net if open. I'm going to be on the road Jun 17 through Jun 23, I'm hopeing to check into as many net as possible on the way.

Also I'd like to know the location and Freq of NOAA stations along the way.

If there is a site that I can go to that will give me this info I'd love the URL.

Thanks and 73's
KA5IDI

If you are not smart enough to find the repeater listing on the web you probably should not be driving anywhere. Just my opinion...

Boat Anchors for Sale

1. Heathkit Stuff $200.00:
SB-301 in good working order.................15.lbs
SB-401 final amps (61146) blown..............25.lbs
D 1410 keyer..................................4.lbs
Turner 454C Microphone........................2.lbs
Heathkit Manuals 2.lbs
Packing......................................10 lbs
Shipping weight..............................57 lbs

2. Gonset Stuff $125.00:
G66a Receiver with Power supply..............16 lbs
G-77 Transmitter with modulator/pwer supply..30 lbs
Gonset Manuals and cables.....................1 lbs.
Packing......................................10 lbs
Shipping Weight..............................57 lbs
Receiver and transmitter works.
No microphone

3. Siltronix 1011D Comanche 150.00..........22 lbs
Manual (from "Manuals Plus")..................0 lbs
packing.......................................7 lbs
Shipping Weight..............................29 lbs
Needs mike and re-alignment. Was de-tuned down to

Novice portion of ten meter band

4. National NCX-3 Tranceiver $75.00.........19 lbs
External Power Supply/Speaker................25 lbs
National Manual...............................1 lbs
Packing......................................10 lbs
Shipping Weight..............................55 lbs
SSB AM CW on 20,40,80. Needs work

5. Heathkit "Seneca" 6 M Transmitter..$75.00......50 lbs
Heathkit Manual.....................................1 lbs
Packing..10 lbs
Shipping weight....................................61 lbs.
Loads up into dummy antenna.

I would prefer you pick up. If I ship you must pay postage. These are heavy and will be shipped from zipcode 95822. I've included the weights of the items as well as the weight of packaging materials. All for-sale-items weighed by placing the items on the Pelouze Model Y50 Postage Scale.

If interested contact me by email gwilljo@cwo.com.
Greg

I have for sale two new, in the box, Pioneer Magnetics switching supplies:

1) Model PM2500A-1 switching power supply. Rated at 24V at 40 Amps - $60 + shipping

2) Model PM2496A-1 switching power supply. Rated at 24V (adj 19-28V) at 16 amps - $45 + shipping

These supplies would make wonderful heavy duty supplies for a Ham radio project or commercial application.

Even though these units are new and unused, they have been in storage since factory burn in (the Test acceptance data is supplied with the unit). These supplies are being sold AS-IS, with the buyer paying shipping. Money Order or Certified check only, please.

Thank you..... Jim Flanagan WB5KYE

Hello ...

I have 3, used, heavy duty thermal wire strippers for sale. These units were made by IDEAL Industries under the brand name of 'Thermo-Strip', model #45-133B. Two of the three units work very well, the other unit has an electrical problem in the power unit. All three units are complete and are being sold as-is for a package deal of $70 + shipping. Money Order or Certified check only, please. Thank you..

I have the following equipment that I am wanting to part with:

Quant 1-HP model 7470 2-pen bed plotter(RS232 ver). Good Condition, with manuals $35 + shipping

Quant 2-Radio Shack pen plotters (circa TRS80 days) (RS232, made by Houston Instruments).
   Not tested, with manual $25 + shipping

Quant 1- Fluke 1911A counter (250Mhz) Works well, except leading zeros do not blank for some reason.
Otherwise seems to work just fine. No manual $50 + shipping

Quant 1 - Heathkit handheld freq counter IM2400 - 500Mhz , excellent physical condition
No nicads, with manual $75 + shipping

Quant 1 - Heathkit model HW101 with power supply, no speaker. with manual $100 + shipping

Scott:

Please excuse the Ham / Alaskan "wannabe" who responded unkindly below. Most real Hams and most real Alaskans are not so self-righteous.

In answer to your question, my favorite site is the ARTSCI site at http://www.artscipub.com/repmain.html . Enjoy your trip and good hamming.

PS: If you decide to make a trip to the "last frontier", there are some excellent repeater sources available through the local clubs.

Real Alaskan Callsign - AL7GA

Hi Jeff,

I just checked out your homepage...pretty cool. I thought I'd say "howdy" as
I am a fellow bluegrass lover.   This is my first attempt at communicating
with any US bluegrass fans using the net and it's all a bit new to me.
     I not
even sure you will get this message but what the heck. Bluegrass music is not
all that big here in Australia, not by American standards anyway, but I guess
that is to be expected. I have been playing bass in a bluegrass band for
about 18 mths and at the risk of sounding big headed, we're not hlalf bad.
my favourite BG bands are the Lonsome River Band and Blue Highway. Have you
had the opportunity to see either of these bands perform or have you ever
been to any of the big bluegrass festivals I'm always dreaming of attending?

Better sign off now or I'll be raving on too much. Hope you do get this
message and maybe I'll here back from you soon.

All the best,

Lonesome Jake.

Hello there :)   I'm an electronic musician seriously searching for old
SYNTHESIZERS,KEYBOARDS, drum machines, analog sequencers, vocoders, unusual
old effects and all related electronic musical equipment.

In general, I'm looking for working or non-working instruments made in the late 1960's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and especially PATCHCORDS:
The more unusual, the better.

_OSCar monosynth
_Roland    _TB-303 Computer-Controlled *Bassline
_Roland    _TR-909 Rhythm_Composer
_Roland    _TR-808  "                         "
_Pearl Syncussion SY-1
_ARP       _sequencer
_EML-400 _Electrocomp _sequencer
_Korg _SQ-10 _analog _sequencer
_Simmons SDS5, 6, 7 Drum Brains
```

If you have any of the above or similar equipment which condiser selling, or know where i could find some, please email me at rolandman1@aol.com
If you'd like to, please include your phone # since my email has occasionally been unreliable in the past.

Thank you very much for your time and I apologize if this posting annoys anyone.

I traded in a Kenwood ts940 for one. I could do without a few of the bells and whistles (I don;t care what they say, the scope on both the 746/56 is worthless). In comparison, the size..a far better receiver, the internal IF DSP, the stacked band buttons, the general layout. A very fine package compared to what I had, and what I had was top of the line many moons ago.

Not the most technical reasoning but still, a satisfied user Have fun

What's up with that reply?!?! You couldn't just help the guy out? I guess
that's the kind of crap that people write to the Ham magazines about,
wondering what amateur radio is comming to. There was a time (it would seem
a long gone time) when amateur radio was about having fun and helping
people. I guess you missed the boat on that one.

Evidently Alaska really is a cold place and so are the people there.

Have an Astron RS-20A power supply that is surplus to me. Would like
to trade it straight up for something I could use such as:

Memory Keyer
HF Transmatch
Drake W4 wattmeter
25W synthesized 2m rig (older models that will tune current splits)
Video Capture card for my PC that I can plug a cam corder into
Stack of blank CD-R's
10" Table Saw

or let me know what you have. I am NOT interested in any converted
commercial uhf/vhf FM stuff, have no use for it.

Paul,

Since the power STILL comes from the service entrance panel you have
not isolated it.   You still bring the power lines AND ground to your shack.

There is a point of diminished return. You CANNOT achieve complete
isolation unless you provide your own power source, i.e., generator.

I understand what you are trying to achieve and I have read the other threads and I agree with the National Electrical Code guidelines. You really have to protect your property by following these guidelines.

The point I'm making about the disconnect is if you take a direct hit then nothing is going come out unscathed. If you have a $4000 set up or more then it probably wouldn't hurt to isolate it via total disconnect.

For the "near misses" then the guidelines identified in NEC will do wonders. I'm trying to think of a lightning product catalog that I saw once which had a lot of GOOD application notes. If I can think of it I will pass it along.

You are referring to the electric company's ground and not to "THE"
single point ground.  If we subscribe to the "star pattern" method of
tying grounds together, the electric company's ground is is just one of
many (telco, catv, towers, ground window) that gets wired into the
single point ground.

My question (which Gary addressed) focused on what to do with the normal
house wiring in the shack that was not being used to power the station's
equipment.  It is true these lines are connected to the electric
company's ground back at the entrance panel, but since they are not tied
into the ground window from the shack, an induced charge from a nearby
lightning strike could still possibly damage equipment near the outlets
via sideflash.  That was my only question...what to do about the unused
wiring.

Paul,

My point is that the "ground window" really introduces ANOTHER ground system. You are still pulling power from the original service entrance panel. You are now providing secondary paths. Even when you remove the unused wiring in the shack, you can and will get induced carryover into the shack with a very near or direct strike. If the entire grounding system of the house AND the shack are done properly the VERY best you can do is limit the damage.

If the strike is near enough, or if it is direct, you cannot protect the shack entirely.
The best that can ever be done is to limit the damage.

The biggest mistake folks make is the size of the grounding conductors, and their layout/path. Make any bends with a LARGE radius. Use #2 or #4 conductors for the shack ground as a MINIMUM.

Fred,

When mine works it works good, when it doesn't it doesn't. I just did a drive home and got it to work after tuning manual on 10 meters. Once it started working it worked all the way home and I couldn't stop it. Once I got home it stopped working (but I can't figure out why) and I could not restart it for anything. My guess is that I have an intermittent DC connection in the coax or that theres a ram location that isn't initialized properly and when you power down you can lose it to an unknown state when you power up again.

I'm going to replace the coax and see if that helps. I'm also planning to move it to the roof. Do you know the SN of your 847? I'm wondering if they had a firmware change.

73,
Len

I has 4 antenna connectors, HF, 50 Mhz, VHF, UHF. Under menu control you
can send 50 Mhz out the HF port if you wish.

Having some hum problems with my K.W. TS-140s and a PK232. When I have the din connector plugged into the rig for rtty, I get hum on my audio when transmitting on phone. I could have the pk232 turned off and i still get hum. I pull the din connector out and the hum goes away. Bad ground? Bad connection? BTW, rtty works like a champ. Any ideas would be greatly appreciated.

The FT-847 has 4 antenna connectors-1 for 2 meters, 1 for 70 cm, 1 for
the HF bands, and 1 for 6 meters. The 50Mhz antenna connection can be
disabled and redirected to the HF connection via the 847s menu. This
comes in handy if your using a combo HF/50Mhz antenna. All connectors
are SO-239 type except for the 440 connector, it uses a female N type.

From what I've read, two points about "ground windows" have become
clear:

1) It should be the point through which all the shack's wiring is routed
(and bonded).

2) It should be connected to an "earth terminal" which is at the center
of all of the legs of a star pattern (no daisy chaining or loops). This
provides dissipation paths for, and equalization of, voltage potentials
harmful to equipment (or you).

Using a ground window doesn't appear to me to be introducing another
ground system, but rather a new, necessary leg of an overall ground
system. Are you suggesting that the ground window approach is wrong?

> Even when you remove the unused wiring

These are truisms that apply to any station's grounding system.

> If the strike is near enough, or if it is direct, you cannot protect the shack
> entirely.

> The best that can ever be done is to limit the damage.

Agreed. That is what I'm trying to do, limit the damage.

> The biggest mistake folks make is the size of the grounding conductors, and
their
> layout/path. Make any bends with a LARGE radius. Use #2 or #4 conductors
> for the shack ground as a MINIMUM.

Yes, every piece of literature about grounding mentions not having any
sharp bends in the grounding conductors. That creates more inductance
and more resistance...just what you don't want in a ground system.

I have already purchased a large roll of #4 solid copper wire for
bonding the grounds together. In addition, I went to some local scrap
metal yards and picked up all sorts of interesting pieces of copper
flashing, buss bar, connectors, etc. My timing was good enough one day
to snag a large (45" x 80") piece of copper sheeting. I envision using
this piece to construct a "ground window box" with plenty of room to
mount the surge protection devices for the AC, antenna, rotator/remote
RF switch lines, etc., on their way to the shack.

And then I ad: I can see it now, here is this guy running around disconnecting everything while he takes a lightning strike. Poof. Sounds like the last thing I would want to be doing during a lightning storm is tossing antenna feedlines out the window.

I am following this tread real close also. I am also wiring up a separate radio shack in my backyard. I will have my gear running during any lightning storm. The commercials do, so why can't a ham?

A friend of mine has an Icom IC-2AT 2-Meter HT for sale. It comes with a newly rebuilt battery pack, a rubber duck antenna, and a charger. This is the radio where you dial in the frequency on the top of the radio. He is asking $100. He doesn't have web access, but you can E-Mail him at ar4rz@juno.com. Please respond via E-Mail and not newsgroups. This *IS NOT* my radio, I am only posting this for a friend.

The radio belongs to:

Yes, besides the absurdity of all the running around and disconnecting
things, there is that small matter of DYING while doing it. :)

This sounds like the way to go, if one has the room. A seperate
building designed from the ground up (so to speak) that optimizes the
functionality of a ham shack. Good luck with it!

Hi Tom,

Sounds familiar, I too had a bad coupled noise problem that may be related to what you are hearing. After several attempts using ferrites, filters, etc., an isolation transformer (1:1 inexpensive Radio Shack type) in the speaker/output audio or mic/input audio or both. I found this solved the problem for me. Hope it helps you.

Tom O'Brion wrote:

> Having some hum problems with my K.W. TS-140s and a PK232. When I have the din connector plugged into the rig for rtty, I get hum on my audio when transmitting on phone. I could have the pk232 turned off and i still get hum. I pull the din connector out and the hum goes away. Bad ground? Bad connection? BTW, rtty works like a champ. Any ideas would be greatly appreciated.

Hi, all-

I just took a look at the ICOM PCR1000 PC Radio (external)
module. It's construction appears to be very good, and the specs
were very impressive.

Does anyone have one of these currently in use?

- What are it's caveats/pitfalls?
- Is $450 (new) a right price?
- Can it run on a 286, or does it need a 386 or better platform for software compatibility?
- Does the PC create terrible RFI?
- Is the channel memory limited (nothing in documentation)?
- Is the DSP a necessary option?
- How's the SSB reception and stability?

What else did I forget to ask?

TIA-

PCR 1000 software runs under Windows 95, and requires at least 486 66 MHz,

```
but I'd recommend a Pentium. PC controlling the receiver should not cause
any RFI. DSP card (UT-106) is only an option, and number of memory channels
is limited only by your PC's hard drive space. Main oscillator and BFOs are
very stable, therefore providing a good SSB reception.

Hi Tom, I can't offer you much advice on this but just FYI, I had the
same problem with a KAM and the TS-440SAT. It's been a while ago
and I dont' remember if I fixed it or not. Maybe the audio inputs
on the DIN somehow interact with the mike audio in some way (loading,
etc?)

Fellow Hams,
The time for action is at hand. There is only a short time to act on this.
It appears to me that they gave us less than a month to reply so that this would not have time to be published in the ham magazines, so we must use other methods to get the word out quickly. Please read thru the info below, I got it from a remailer that I am on at home but I wanted to share this with all the hams I know. Each one of us must act or lose one of our most popular ham bands.
All you need to do is write a short note saying that you oppose RM 9267.
Send it to -
Secretary, FCC, Washington DC, 20554.
and do it by June 1st. Be sure to sign it with your name and address and callsign.
73, Dave KD5FX

Greetings:

I know that this subject has been broached in the remailer. But here's some more info which was just brought to my attention.

First one from the ARRL, the second from WA6ITF & Company.

SB QST @ ARL $ARLB030
ARLB030 LMCC petition opposed

ZCZC AG30

QST de W1AW
ARRL Bulletin 30 ARLB030
>From ARRL Headquarters
Newington CT May 7, 1998
To all radio amateurs

SB QST ARL ARLB030
ARLB030 LMCC petition opposed

The ARRL is organizing opposition to a new threat to the 70-cm Amateur Radio band. The Land Mobile Communications Council (LMCC) has asked the FCC to immediately reallocate 420 to 430 MHz and 440 to 450 MHz from the federal government to the Private Mobile Radio Service (PMRS) on a primary basis. Amateur Radio now enjoys the use of 420 to 450 MHz on a secondary basis, and the 430 to 440 MHz segment is an international allocation. The 70-cm band is the second most popular of the hobby's VHF/UHF allocations, with substantial FM repeater and other operation in the 440 to 450 MHz segment and a variety of uses in the 420 to 430 MHz segment.

The LMCC request, based on ''additional spectrum needs of the PMRS community,'' acknowledges Amateur Radio's use of 420 to 430 and 440 to 450 MHz, and suggests that ham radio applications can remain secondary to PMRS in those segments, but offers no explanation of how sharing could be accomplished. The LMCC says it believes the 430 to 440 MHz subband ''is more important to the amateurs for use in emerging technologies such as links with spacecraft and amateur television applications.''

The petition also suggests that equipment availability and technology resulting from an expanded PMRS presence on 70 cm would benefit hams ''pursuing such applications as compressed video television in the 430-440 MHz band.'' The LMCC concedes, however, that its ''most urgent need'' for PMRS is voice and low-speed data applications, not advanced technologies which might come later on.

The petition also notes that PMRS already uses 420 to 430 MHz in three Canadian border cities (Buffalo, Cleveland and Detroit) and a ''reduction in military use of this band is foreseen.''

The LMCC also seeks allocations at 1390 to 1400 MHz, 1427-1432 MHz, and 1670 to 1675 MHz as well as 85 MHz at 960 to 1215 MHz by 2010.

Comments are due on the LMCC's Petition for Rulemaking, RM-9267, by June 1. Reply comments are due by June 15.

Subject: [rpt] Newsline Version - 420 MHz threat: RM-9267 from LMCC
Date: Fri, 8 May 1998 14:07:50 EDT

Here is our Newsline version of the story. Unlike every elses, it gives info on how to protest and where to send that protest -- aka -- commentary.

I'll add -- do not look to the ARRL, W5YI, the FCC or anyone else for salvation on this one. ONLY YOU can save our ham bands. Do not wait for some 'annointing power' from Newington, Dallas or Washington to tell you what you already know. These are you bands. You and only you can protect them.

Learn to be your own leader instead of playng 'follow the leader.'

de Bill Pasternak, WA6ITF / Newsline

LMCC DEMANDS 70 CM HAM BAND FOR COMMERCIAL USE

The Land Mobile Communications Council has issued a demand to the FCC that it immediately reallocate of most of the 70 centimeter Amateur band over to private mobile operations with private land mobile designated as the primary user.

Technically the document is nothing more than a formal rule making request to the FCC that has been designated RM 9267. In reality it is more a demand by the LMCC for the FCC to immediately reallocate 420 to 430 MHz and 440 to 450 MHz away from the federal government and over to the Private Mobile Radio Service on a primary basis. The Land Mobile Communications Council is also asking for news allocations at 1390 to 1400 MHz, 1427-1432 MHz, and 1670 to 1675 MHz. It is also demanding a walloping 85 MHz at 960 to 1215 MHz and it wants all of this turned over to the Private Mobile Radio Service no later than 2010.

But LMCC is not willing to wait until 2010 to take over the 70 centimeter band even though this is the second most popular of the Amateur radio services' VHF and UHF allocations. Amateur Radio is a secondary user of 420 to 450 MHz. There are thousands of FM repeaters operating from 440 to 450 MHz and a variety of modes on the air every day in the 420 to 430 MHz segment. While the Land Mobile Communications Council petition indicates that it is willing to permit Amateur Radio to retain some sort of secondary status, this would be only on a non-interfereing basis with the new commercial interests.

Experts say that the best way to kill RM 9267 is though a massive letter writing campaign to the FCC. A campaign that outlines the specific use of the band by Amateur Radio Interests -- informational filings that detail how every hertz of 420 to 430 and 440 to 450 MHz is utilized on a day to day basis by hams.

The commentary cutoff date on RM 9267 is June 1st. This leaves precious little time for radio amateurs around the nation to react. Those responding must be certain to reference RM 9267 at the top of your letter. Send comments to the Secretary, FCC, Washington DC, 20554.

Again, that June 1st as the commentary cutoff date on RM 9267. Comments go to the Secretary, FCC, Washington DC, 20554.

EDITORIAL:

This is actually an end run by the LMCC to get spectrum for free. Others in the same business have had to BUY the spectrum at auction. This is only the first in the pressures to get spectrum for free when others have pay for it. There main argument will be that their spectrum loading studies indicate that these frequencies are used very little by Amateurs and a secondary use basis is adequate for the Amateur needs. Just think of it folks, all those phantom repeaters that are on the coordination books that have been blocking the real use of these frequencies will be our undoing. The other ugly fact is that the LMCC members contribute to congressional re-election campaign fund and the Amateurs do not.

These are the facts. The spectrum alligator is biting off chunks all the time. 902-928MHZ has become useless will the addition of many other users. We are about to lose 1240-1260MHZ. Every year we will see more chunks bitten off our spectrum. The argument that Amateurs push forward technology just isn't true today. The only thing we support is technology that is 30 to 50 years old. The commercial market has pushed technology and we have resisted. As far as the Amateur is concerned 1200 baud is good enough. Try that one on any 14 year old today and they will laugh at you. Ask most Amateurs what TDMA or CDMA is and you will get a blank stare. Our amateur community has insisted that the rules OUTLAW any technological progress. The last change was when SSB came in the 50's. The digital technology we support is from the 30's. Today we have to justify our usage. We can bicker all we want, others will only view this with amusement.

I think we agree on all points here. One suggestion I have for everyone here:

Crosslink! Take your 52, 220, 440, 1.2 pairs and link them, FULL TIME, to the busy 2m repeaters in town. That will at least get some voices into our under used spectrum. If people bitch, tell them to go talk on another repeater.

I'm sure all of these groups going for spectrum have spectrum analizers in storage mode across all bands. Where they see quiet, they demand, and I think rightfully so, to use it for more productive uses. We've sat on our butts for years moaning about HF (which NO ONE wants) and contests (getting points for adding to congestion?) and CW (there's a bright idea, insist that people use the most narrow bandwidth to justify more spectrum).

Time to get the projects off the bench and on the air. I'm guilty too... I have a couple repeaters to install. Let's let this be our motivation.

Don't think about writing to your congressman or the FCC until you can honestly say you're helping the service. If you're on the same bands and the same modes as you were 10 years ago, YOU are the one that caused this situation.

Ray, KD4BBM

This is *NOT* true. It is not only possible, it is routinely feasible to sustain
multiple direct strikes without sustaining *any* damage to your equipment.
Every commercial broadcast station does it during every thunderstorm.
They don't survive due to good luck, they survive due to good engineering.
And a key part of that good engineering is the ground window (that name
is really a misnomer, keep in mind that Earth and ground are rarely the
same thing even though in common language they are often used
```

interchangeably).

A properly installed ground window equalizes the potentials on all cabling exiting or entering the protected area. This is the key concept to protecting against strikes. There is no such thing as "the" ground potential when you're dealing with lightning. What the ground window does is establish *a* common potential for all cabling entering and leaving the protected area. As long as that is done, we don't care very much what potentials might exist to various connections to Earth at various other locations.

We only care about that to the extent of preventing sideflashes. As the NEC recomends, a 5 foot separation is normally desired between a fully lightning energized conductor and any other conductor. By snubbing these conductors to Earth, we can reduce the sideflash potential to manageable levels which can reduce that distance. In dry air, it takes 10,000 volts per inch to breakdown air and allow a sideflash. If we could keep the potential difference between two separately earthed systems down to 10,000 volts, we would only need a separation of 1 inch. Generally we can't do that due to the inductance of the various conductors and the difference in their Earth terminal potentials, so we want a larger separation. But we don't need the full 5 five feet as long as the inductance in the differential path is kept relatively low.

The ground window itself is normally snubbed to Earth with as low an inductance conductor as we can arrange. This is done primarily for personnel protection. A ground window can work even if it is fully floating, but the entire station will elevate to a very high potential with respect to Earth during a strike in that case. That's fine as far as the equipment is concerned since all of it elevates to the *same* potential. (It is potential *difference* that matters, there actually is no such thing as absolute potential). But it is not fine for things not connected to the ground window. The potential to Earth can be high enough to allow a sideflash to personnel wandering around in the protected area, or to other things which aren't being held to the same potential. So we snub the ground window to Earth as well as possible to reduce this hazard. (Realize that by design we provide no other path to Earth for equipment grounds *except* via the ground window.)

We also reduce the potential to Earth at the ground window by providing lightning with *another path* to Earth. We don't really want the ground bond at the ground window to handle the entire strike current (though we should size it so that it could). We want the bulk of the strike current to find its way to Earth via another path *outside* the protected area.

We do that for antennas by providing a direct path to Earth from them. Towers are bonded to the station radial ground field at their bases. That's the lowest inductance path for the lightning current in a tower strike, and most of it will take that path rather than the path over to the station ground window and its connection to Earth. (The paths are in shunt, and the lower inductance path hogs the current.) Now the potentials involved in a strike can be staggering, and the currents are huge, so even with this shunt, the ground window still is needed. But we've substantially reduced the work it must do to provide protection.

Similarly, we depend on the suppression at the power service entrance to give us some relief from strike surge coming in on the power lines, and the same for strikes to telephone lines. It is a good practice to install a whole house suppressor at the service entrance panel rather than depending on sideflash between the nominally hot service conductors and the nominally grounded service buss and panel housing. Gas tubes are best, but silicon carbide suppressors can be used instead if you expect no more than one strike per storm (silicon carbide suppressors are one shot protectors, you have to replace them after they fire). This won't do the whole job because of the finite impedance of the service entrance connection to Earth, but it will reduce the load on the suppression at the station ground window.

The phone company installs a suppressor, carbon blocks in the old days, gas tubes today, at the telco service entrance. This helps by shunting some of the strike current to the telco earth terminal, usually a made electrode (ground rod). But the lines will still be elevated with respect to Earth by an amount determined by the impedance of this Earth connection and strike total current (Ohm's Law). It helps, but not enough. We still must bond telco lines coming into the shack to the ground window.

We also want to equalize the potentials between the various Earth terminals as best we can. They won't be the same due to the finite impedance of the paths through Earth between each of them. In fact, Earth currents during a strike are huge, and can elevate the potential of earth terminals which aren't even directly involved in handling the strike current. So we star connect all of the Earth terminals to a single point. This establishes a point of common potential for all of the Earth terminals. This is the point where we bond the station ground window to Earth. That bond will then only have to carry the current driven by the difference in *average* potential between the conductors bonded to the ground window and the *average* potential of all the various Earth terminals in the system. This reduces the load on this bond, and reduces to the maximum amount possible the average elevation of station potential above Earth, thus reducing as much as possible sideflash risks.

The ground window should be our *last* line of defense, not the first. We want to knock down as much of the lightning surge as possible before reaching it. Multiple Earth connections *outside* the ground window are a strong advantage in this regard (they are death inside the ground window). We want them, and we want them to have as low an impedance as possible. In that regard, we want to use the best Earth terminal techniques possible. Ufer grounds are one such. If you have one, use it. If you don't have one, consider installing one. Rebar in concrete is a better Earth terminal than virtually anything else you can provide. Ground rods are about the worst Earth terminals that are still useful. Plan accordingly. The NEC *requires* all Earth terminals to be bonded together. Do it, but do it with the proper circuit topology.

Station layout, antenna systems layout, ground field layout, etc all play roles in the total system protection design. We want all of that to be in star, and stars of stars, topology. Avoid at all costs use of daisy chains and buss layouts. They are sure producers of ground loops which will contain vulnerable equipment. The purpose of using star topology is to *short out* any ground loops that may exist in each subsystem so that equipment won't be contained in the loop.

And always remember that lightning is *RF*. Different length paths will have different phases due to transmission line effects. Maintain symmetry and balance to avoid problems caused by this. And inductance is our chief enemy. We need to minimize it as much as possible in any lightning current path to limit the potential developed across that path. We're dealing with peak current flows of 18,000 amperes, and the frequencies in the lightning discharge extend into UHF, so it doesn't take much inductance to develop very high potential differences.
(Fortunately, the bulk of strike energy is contained in frequencies below 2 MHz. If it were evenly distributed across the spectrum, our task would be much harder.)

We can't prevent lightning strikes, but we can control the effects of a strike by using sound engineering practices. Lightning is no different from any other RF current (except in magnitude). The same electrical laws we use for RF currents work for lightning currents too. Just model the discharge as an 18,000 ampere constant current source backed by virtually unlimited cloud to Earth potential. (The discharge behaves as a current source due to the characteristics of the plasma tube conducting it.) Since we can count on a fixed current, we can determine the potential between any two points by simple application of Ohm's Law (and Kirchhoff's laws for multiple branch paths). It is just like any other RF circuit. The duration of a lightning stroke is approximately 12 microseconds, so we can also determine the amount of energy a given impedance path must be designed to handle to avoid damage. The only things that should be unfamiliar to us are that the discharge is broadband, and that its magnitude is larger than we are accustomed to handling.

>lightning, they dissipate the charge before it can build up.

Oh dear, that is *NOT* true. Ben Franklin must be rolling over in his grave. Franklin invented the lightning rod, and as he well understood, you cannot prevent lightning, you can only control the discharge. Lightning rods do that by becoming the *preferred target* for the discharge. Since they are *designed* to handle it safely, no harm is done to the structure on which they are mounted.

>See, lightning
>doesn't start in the clouds, it meets a 'feeder' from the ground. if there
>is no feeder, there is no strike.

That's half true. The lightning discharge follows the lowest impedance path between cloud and Earth. Typically that's formed when a step leader descending from the cloud meets a streamer coming up from the Earth. The streamer isn't *mandatory*, but it usually does exist because the mirror charge in the Earth is as strongly attracted by the charge in the cloud as the charge in the cloud is attracted to Earth.

>   That is explained by the quote from his article;

>sphere. For a sphere one centimeter in radius, Em=30,000 volts, and no
>amount of "charging" can raise the potential of a sphere this size, in air,
>higher than 30,000 volts."

That's true enough, but what is left out is what happens when the potential exceeds that threshold, as it *will* in a thunderstorm. What happens is streamer formation. You can't prevent it. It is driven by the many millions of volts potential between cloud and Earth.

>   And we all know that lightning carries a much greater voltage than
>30,000.

Yes it certainly does, so even a spherical conductor will break into streamer formation. In fact, lightning rods are sharply pointed. This allows them to break into streamer formation at a lower potential.
By streaming early, before other structures in the area break into streamer formation, they become the preferred lightning targets.
That's their job.

>   Thus, if you were to install an inverted spear that is well grounded
>above your installation, there will be no strike in about a 50ft radius.

Nonsense, and a total misunderstanding of the physics of lightning. A lightning rod does offer a cone of protection around it, but not by *preventing* strikes. It offers the protection by *taking* the strike itself. It assures that by being designed to break into streamer formation before surrounding structures do, and thus making itself the preferred path for the lightning discharge. Franklin proved this over 200 years ago.

This should be well covered in any electrical text documenting the history of science. Franklin's invention was a major milestone in electrical science, and a great boon to humanity. Before Franklin's understanding of the lightning discharge, man was at the mercy of lightning. It seemed a sign of divine wrath (though amusingly, it struck church steeples most often). Franklin showed it to be mundane electricity, and subject to man's control by application of the laws of science. This was a major triumph of the Age of Reason. I'm appalled that there is so much ignorance and myth surrounding this subject, especially by those in a supposedly technical avocation.

Your other option is to simply bond the unused wiring to the ground
window. That'll assure it will be at a low enough potential not to
side flash.

check your cable - both ends - sounds like maybe an open ground and shield
might be acting as antenna for computer rf. I haven't had the problem, but
know several who have and cutting off the computer eliminated the hum,i.e.
computer rf. checking the shield ground connections found one end no longer
connected.  Evan  KE4BWD

Since writing about this I've heard from several people who have had the same problem and one who had no problem and really liked the antenna.

After playing with the set up for quite some time I figured out how to get it to operate in automatic mode, and although it does work it's a bit cumbersome. Here is what I do:

1. Whenever you push the tune button make sure you hold it in for at least 1 second. A shorter push will cause the antenna to retract to it's smallest position and exit auto tune functionality.

2. When the antenna is not auto tuning (ie because of #1 above or for any other reason) the following sequence of operations will make it auto tune.

    a. Close MOX switch. Hold down Mhz up key. If in CW you will have to hit the key once to get the transmitter to lock on. This will now start manual tuning mode.

    b. Watch the SWR indicator and when it exhibits a match let it keep going until it gets to a mismatch. Then use the Mhz down button to bring it back into match.

    c. Unlatch the MOX button. If you were in CW the transmitter may still be locked on, but if you touch the key it will unlock (this seems to be a firmware bug)

3. Auto tuning will now work on any band and mode as long as you pay attention to #1 above.

Bottom line seems to be that auto tuning only works after the antenna has been brought into a matching condition on any band. For my tests I've been using 21 Mhz but I think it will work anywhere. If you accidently bump the tune button for less than the required 1/2 second to invoke auto tuning the antenna will need to be manually matched before auto tuning will work again.

The testing that led to this discovery included changing antenna mounts and when I decided that made no difference I went back to the "recommended" Comet mount. One difference though, when I put it back on I left the aluminum strip out of the mount. This made the mound dig into the finish of the truck a little bit (not a problem) and may have given me a slightly better ground, although I doubt it.

By manually tuning as above, and being very careful not to do a short push on the tune button, I am now able to enjoy the full functionality of the ATAS-100 and it's great.

I do think they need to rev the firmware. It would be a lot better for mobile operation to have retract and tune sequences be reversed from what they are, and the TX locking on in the CW position needs to be fixed. I also need to verify it again which I will do for a subsequent posting.

/Len

Ernie,

I had the same thought. Perhaps ham rigs don't need FCC type acceptence -
they need Highway Safety Board Approval!

Maybe you could clarify something. Are you talking about bonding the
"live" unused wiring (like you would the station AC through suppression

devices) at the ground window, or are you referring to the bonding of wiring that is still under the house and in the walls that has been "cut off" from the rest of the house, but is still susceptible to induced energies? I suppose if it were the latter case, the other end(s) of the unused wiring would have to be grounded too. That might be difficult to do effectively.

Also, there could be a lot of unused wiring to account for in the average room. It seems like you could end up with a lot of extra wire strung about. I'm a minimalist when it comes to ham shack wiring. The more extraneous wiring you have, the more problems it could introduce.

Even though my first inclination would be to remove the wiring, there is certainly no guarantee that it would even be possible. Doing as you suggest might be the only realistic choice in many situations, as long as it was possible to be able to observe the "5 foot" rule whenever wiring couldn't be accounted for.

In case some of you following this thread are wondering, there IS a reason that I might seem to be a little "wierded out" about this topic. Although I've been a ham for over 20 years, I've been out of the hobby and without equipment for the past several. I've decided to get back into it in a big way. I even upgraded (finally!) from general to extra in anticipation of getting back on the air. My point here is that I've spent a good chunk of change recently on equipment (new and old), and I'd like to ensure that it (and me) are around for a while to enjoy it.

Simply disconnect the hot wire from the breaker in the entrance panel and attach it to the ground bond in the panel. All you've effectively done is add another ground bond between power ground and your system ground. Since that is *electrically* outside the ground window, that's acceptable, IE it is electrically tangental to the protected area. Potentials between this wiring and other wiring attached to the ground window should now never exceed reasonable sideflash potentials.

That's true. Ideally, you would remove the stray wiring. What I'm offering is a compromise alternative that is safe if not elegant. It may cause RF problems, however. That can't be determined until the details of your antenna systems are known.

There is more to be done, and now is the time to do it. Besides the ground window we've discussed at length, and besides the treatment of your Earth terminals to form an effective ground field, there are other matters of layout to be considered. For example, do not use an aerial swing for your coaxes off the tower over to the station. Bring them all the way down to the ground and bond them there before bringing them to the station.

If you come off the tower at the 10 foot level, and assuming the tower is Rohn 25, there is enough inductance in that section that during a tower strike your coax shields will be elevated by at least 10 kV. That's not nice to bring to the station. By bringing the coaxes down to the tower base first, you can short out that inductive drop. You also short out the single turn transformer formed by the tower and the coax.

That too can induce surge on your cables.

As I've said many times, details matter in this sort of thing. Some of the details are not obvious. And some of the things which might look like a good idea, aren't, when you examine them closely. The ideal would be to have an on-site analysis performed by a lightning mitigation specialist. But that can be expensive, and there aren't that many qualified lightning mitigation specialists in the country, and not all of them are familiar with the unique problems of amateur radio installations anyway.

The lightning discharge is a complex phenomena, but if you take the time to analyze it with respect to protective measures, it isn't that complex. Just keep in mind you are dealing with a broadband RF constant current source of about 18 kiloamperes and model accordingly. You can't fight it, you have to work with it, and guide it so that it doesn't have adverse effects on your installation.

This would work fine as long as the hot wire you are moving over is from a circuit that is dedicated to the room in question. I'm no electrician, but I think most bedroom wiring circuits are wired in series with another room or two. There might be seperate wiring for the dryer, kitchen, family room, etc., but I doubt there is a seperate circuit brought to the entrance panel for EVERY room in the house. I don't think that would be too cost effective from a wire usage point of view. That's why I'm thinking I'd have to get under the house and trace the wiring that goes to the part of the house where the ham shack is to go and hope that it's the last in the series and not the first.

Yes, its the RF problems that I'm trying to minimize as well. Can you say "re-radiation" or "stray RF"? As far as the antenna systems go, I'm going to be putting up a tower and a 6 band quad. There will be at least one other antenna hanging off the tower and maybe two. I'll also have a R7000 installed somewhere away from the tower. Between the coax lines, control lines, rotator lines, power lines, ground lines...yada yada yada, there's lots of stuff to account for, but that's why I'm trying to address the issues now and not after the fact.

I have already been to the scrap metal yard and picked up several blocks
of aluminum to be fashioned into grounding blocks for the coax and
control line shields at the base of my aluminum tower. I also purchased
some penetrox A-13 joint compound to keep the dissimilar metals happy.

I've been reading a lot about this sort of thing from Polyphaser and
other sources. I know better to be stringing coax or other lines at
random.

Yeah, the on-site analysis by the specialist might be a bit of a stretch
in most circumstances. Especially for the average ham. I don't claim
to be an expert, but I'd like to think I have some idea of what I'm
doing. :) Of course, it couldn't hurt to bring in another pair of eyes
to check things out.

I have no plans to fight it, that's for sure. The surge/transient/rfi
devices I'm designing do take into account the wide spectrum of
frequencies that lightning generates. Since much of the energy is
around 1 Mhz, that is where I try to maximize my blocking efforts. I am
also addressing HF/VHF energy in the secondary stages of the filters.

If all the grounding materials can just dissipate most of the energy,
I'm hoping that my devices will be able to account for the rest.

I am looking for frequencies for a database for the following areas:

El Dorado County
State of Nevada, western side
Both North & South Lake Tahoe
United States Forest Service, Tahoe National Forest\

Please help me with this frequencies, if you only have a few that is great anyways!!

Thanks,
Scaning

Franklin was right. But how much of his reasoning about lightning
conductors was based on a knowledge of propagation of electrical transients
along transmission lines (LCRG) and how much on intuition ?

The years when he did his work may provide a clue. How does he interleave
with Ohm, Faraday, Henry ?

He is not so well known over here. Perhaps because the infliction of
thunder storms is much less severe.

The Six Club Sprint will be from 2300Z Saturday of the following week until
0300Z Sunday (May 16-17, 1998) .
THIS WILL BE THE FIRST AND ONLY SPRINT THAT WILL BE IN CONJUNCTION WITH ANY
OTHER SPRINT.
SPRINT RULES
The Six Club rules are simple, score one point for all qso contacts and the
grids are the multiplier. Explanation: If you have 10 qso's and 25 grids
your score would be total grids times total qso's. Other words 25 times 10.
ROVERS ARE WELCOME TO JOIN IN ON THE FUN. ROVER RULES ARE THE SAME AS THE
OLD STYLE ARRL.
HAVE FUN

For further information on forms and instructions to email your results
please go to:
http://6mt.com/contest.htm

Thank you.

Reg,

Perhaps he is not so well known over there for ppolitical reasons?
He was one of the drafters and signers of the American Declaration of
Independence and was an American agent in France during our
Revolutionary War against Britain.

No offence intended, Reg! That was over 200 years ago!

I am seeking information with respect to the transmission of facsimile messages by amateur radio:

1) Is it done?

2) When did it start?

3) Is there any organization or chapter that covers this topic?

4) Have there been any articles or books published on this topic?

5) What type of equipment is used?

6) Can it be done on simplex vs. duplex transmission?

Any and all responses appreciated.

dhearn@dhca.com

Best regards,

David Hearn, Toronto

Thanks for taking the time to read my message - if you don't like the prices, make me a reasonable offer, and I assure you I will consider what you offer!!   ALL PRICES PLUS SHIPPING!!

Got a NEW ADI AT-201 HP (high power) 5 watt ht, received in trade, with extended transmit/receive 2 meter ht. $150.00

Also have a 486/33 tower computer 12 meg memory, 400 meg hardrive, soundcard, vga b&w monitor , 14.4 internal modem, all new except for the hardrive and monitor. $300

Casio TV-430 2" color tv, works perfectly, looks new, I purchased new a radio shack wall wart, so I can watch tv in the shack without using batteries. $45.00

Timex/Sinclair 1000 ! 1980 Era, collectors item for sure, works perfectly, includes everything but tape recorder and monitor, even have original games!!

Tandy TRS Model 4 Good condition.

Needing to sell stuff to purchase hf rig!!

Of course not Steve.

I understand Franklin was an eccentric fellow whose favorite pastime was defying the laws of probability by strolling around the open countryside in the middle of thunderstorms while flying a kite.

Since these experiments were conducted more than 200 years ago I would think our modern lightning conductors owe much, not only to his sound intuition, but also to his extraordinary good luck.

Reg.

Can you describe the TV? Is it an active matrix screen? How old?
Condition?

-Bill Cheek-

NFM DISCRIMINATOR CHIPS - BASEBAND AUDIO - SCANNER DATA INTERFACE

There is a growing interest in tapping the baseband audio out of various scanners for decoding of a variety of esoteric signals, including CTCSS, SCA, FSK, RTTY, FAX, etc. By and large, such signals cannot be taken from TAPE REC jacks, headphone jacks, and EXT SPEAKER jacks because of the voice-band filtering that is done between the signal source and these output jacks.

Therefore, it is necessary to tap the "baseband audio" directly at the output of the discriminator chip for your scanner. Table 1 shows a list of scanners, the discriminator chip(s) used in the scanner, circuit symbols of those chips, and three pins of general interest on the chips: RF-Input, Scan Control, and, of course, the baseband audio (discriminator output) pin.

Even though your scanner may not be listed below, try to find its discriminator chip, and chances are it will be listed with one or more scanners below, the pins of which will be the same for your unlisted scanner! Corrections and additions to this list are requested. See my email and other addresses at the end of this file.

For hookup information, see just after Table 1.

TABLE 1: SCANNER DISCRIMINATOR CHIP PINS OF INTEREST
Updated 04/19/98

HOOKUP PROCEDURE

If you need the raw Discriminator baseband audio signal for external purposes, the best way to access it is via a jack installed in a convenient, unobtrusive location on the scanner.

1A BASE SCANNERS: Install an RCA or other jack in a desired place on the scanner's external case, typically the rear panel.

1B HANDHELD SCANNERS: If you can find the space, use a standard monaural 1/8" phone jack or a 3/32" mini phone jack. Some scanner are so cramped inside that even these won't fit. In that case a strip of 3 pinline sockets can be melted into the plastic case and wires soldered to the inside protrusions. The middle pinline socket is not connected to anything; it's just there as strength and support for the pinline plug you make, with the shield ground soldered to one end and the audio-center soldered to the other end: GND---o o o---NFM DSCR (audio)

"Break-apart" pinline plugs/sockets are available from Mouser, DigiKey, and Hosfelt. These little puppies are good for a lot of hacker needs, so get a supply!

2. Connect the shell or outer frame part of the jack to scanner chassis ground. (Use one end socket for pinline connections)

3. Connect the (+) leg of a 2.2-uF to 4.7-uF tantalum capacitor to the Discriminator output Pin. (Capacitor should be tantalum, but can vary in value from 1.0-uF to 10-uF at a voltage rating of 16-35 vdc.)

4. Connect the center conductor of a shielded coax (RG-174, etc) or shielded mic cable to the (-) leg of the capacitor. NOTE: if the distance from the NFM tap to the jack is less than 3", then a single unshielded hookup wire will do fine.

5. Connect the shield of the cable at this end to a nearby PCB ground trace or spot.

6. Connect the center conductor of the other end of this cable (or single hookup wire) to the center or hot lug of the jack.

7. Connect the shield of the cable at that end to the ground lug of the jack.

8. Fabricate or buy a shielded patch cable with one end to mate with the new jack on the rear of the scanner at that end....and the other end to mate with whatever jack is on the tape recorder, processor, decoder, or whatever device is to be connected at the other end.

If you want to decode trunk control, MDT, pager, fax or other digital signals, you will need a special Interface between the NFM Discriminator/baseband audio of the scanner to the PC's serial port. Following is a tried and true Data Interface circuit that is good for everything we've tried, including a wide variety of scanners.

```

    o-------------+|[-----o-------->|---------o
    |                     |      1N4148
    o--->>>Ground         o-------->|------------> 2 TxD  3

 LEGEND:
       o = soldered connection/junction
```

```
   --|-- = crossover (no connection)
     +|[ = capacitor, polarized (see +)
      >| = diode (anode->|-cathode)
      |< = diode (cathode-|<-anode)
 -/\/\/- = resistor
   -->>> = ground
```

NOTES:

1. Use tantalum capacitors, +|[polarity as shown

2. Radio Shack's LM-741 works fine. Others might not!

3. Use 1/4 or 1/8 watt resistors to save space

4. Build circuit on a trimmed and fitted piece of perf board inside a DB-25 shell for max efficiency and space savings. DB-25 connects to PC's comport and a shielded cable from the scanner goes to the inputs, shield is ground and center is audio.

5. Many handheld scanner have no space to install a phone jack for the NFM Discriminator Output. For such tight spaces a strip of 3 pinline sockets can be melted into the plastic case and wires soldered to the inside protrusions. The middle pinline socket is not connected to anything; it's just there as strength and support for the pinline plug you make, with the shield ground soldered to one end and the audio-center soldered to the other end: GND---o o o---NFM DSCR (audio)

6. For base scanners, install a female RCA jack on rear panel.

7. For handheld scanners where there is space, use a 3/32" mini or a 1/8" standard monaural phone plug.

8. Connect the interface to a comport on the PC. Plug the input cable in to the scanner's NFM Discriminator Output Jack. Tune to a desired signal and run the decoder software of your choice.

You might note that COM2: and COM4: use the same IRQ -- that often causes
problems with other communications software... I suggest removing the MODEM
for a test, that is the only way to quickly tell if the rig, software and
cable are OK.

I suspect the cable, rig and software are OK, just a bit touchy!

You will also want to upgrade the software, V1.03 has bugs download the patch
from RT's site: http://www.rtsars.com

I just purchased the software and cable ... after some start up problems, and
the bugs in the version 1.03, I finally have it up and running.

Thank you for taking the time to read this.

I need a wiring diagram for a packet interface between an Azden PCS4000 and MFJ 1270c.

Can anyone help?

Thanks for reading my message.

I have a good condition Alinco DR-110T (2 meter mobile) with extended
receive/transmit (on the public service band 130mhz-180mhz) and receive only
on 300mhz & 800mhz. Doesnt cover the entire 300 or 800 mhz band however it
does receive quite a bit!!
Radio includes mounting bracket, mic, and wiring harness. Sell cash price
$150.00 + shipping OR trade for a dualbander in good condition w/accessories
or possibly a 2 meter ht also in good condition w/accessories.. I DON'T want
a HT with the keypad all worn and faded so you cant see the numbers.

Email if interested kc4oxp@flash.net

The QSL info for UA9AR, RK9AWN, UN9FD, RA9AA, RA9AE & UA9JMM can be found
at http://www.rossiya.net/k0xq.htm , along with some interesting pictures
of
the contest station of the Chelyabinsk Radiotechincal College (RK9AWN) and
other Russian amateur radio links, as well as an announcement board & a
link to the CIS callbook.

W6RCA <w6rca@ibm.net> posted this drivel in article
<3543A0AC.3FE0@ibm.net>...

> Then how would you feel if we made dunking a basketball a requirement for
ham
> radio? I have a feeling that you are only satisfied if the requirements
fit
> your genetic makeup and not otherwise. There are a lot of folk that feel
that
> way.

Whaa?? Genetic makeup?? Where on earth do you get this?? Has the ARRL &
the FCC commissioned a team of genetic engineers to design the amateur
radio licensing to conform to what they would hope would be a new
generation of genetically pure Super-hams?

Methinks W6RCA has been reading the Spectator a little too much.

> > Like basketball, maybe amateur radio is not for everyone.
>
> Of course it's not. But how about a EE with a commercial radio license,
25
> years experience as an AM broadcast engineer, and RF chip design
experience?
>

and
> > earn a General class ticket.

>
> This person spent hundreds of hours over 20 years trying to get to 13wpm and
> failed. Is that enough effort for you or should he commit harikari?
> --

Y'know, this is the exact same approach that I have taken with the PGA. After 10 years of golfing 3 times a week, yet never quite being able to get my handicap under 10, I have come to the conclusion that the game of golf, as defined by USGA & PGA standards, is genetically biased against me, as I will never have the depth perception skills & judgement required to become a scratch golfer. I'm sure as hell qualified to become a tour golfer, according to W6RCA standards, as I love the game, have worked within the game, & I know a great deal about the game. So, having been shown the light by W6RCA & WA6VSE, I have now adapted the approach that mastery of the game is not required & would indeed be a waste of time; it would be much more effective to whine & bitch about my inability to master the game of golf until someone pays attention to me & grants me a tour card. Of course, I have yet to figure out the 'personal satisfaction' aspect yet; that is, it would have been much more satisfying to have made the tour on my own rather than having someone hand it to me. But I'm sure that will come to me later on.

And..........oh, I can hear it now!

'Dammit, since when is the ability to send/receive 20 wpm CW evidence of mastery of the art of amateur radio?!'

Well, my answer is this: Since the FCC mandated it a requirement to obtain the highest license class, then I guess it is the FCC's benchmark in this matter. To put it bluntly, as I saw in another post here, 'Them's tha rules.'

So, as I see it, you do have a couple of choices in this matter:

1. Spend 10% of the time that you waste posting drivel to this news group, spend $50 on CodeQuik, & reach 20wpm.

2. Elect ARRL board members that agree & sympathise with your opinion, & petition the FCC to change the rules (this is, at least in theory, how a democracy is supposed to operate).

3. Better yet, get yourself a political appointment to the Commission & espouse your viewpoint from that office.

4. Even better yet, run for President (of course, WA6VSE would be the logical choice as the running mate) on the Genetically Challenged Party ticket, & make your own damn rules once elected.

5. Continue to spew forth invalid & nonsensical arguments on this and other rec.radio.xxx newsgroups.

Somehow, I would guess that #5 would seem to be the most attractive option to you. Well, I'll say this-at least you're consistent.

The next message in this thread will probably be some rant about how W6RCA isn't interested in the 20wpm test anyway, as he wants to avoid the 'delusions of grandeur' that affect most Extra Class operators. How noble. Total bunk, but noble.

I'm sure that most members of No Code International mean very well, are committed to the growth of amateur radio, & are able to present their arguments in a well thought out, lucid, & logical manner. I just wish they'd send a couple of their members to this newsgroup.

How do you calculate the correct fuse size for use in a power supply? I have a Miyako 10 amp power supply who's fuse was rewired, so instead of being between the transformer and the power switch it's now between the PCB and the power terminal.

A few days ago I was trying out some equipment on the supply and the fuse blew, I calculate the current consumption to be at no more than 4 amps... but the fuse installed in the supply was a 2 amp fuse, sounds like too little to me.

So I would like to replace it with a higher capacity fuse to see if I can get the supply to work as it should, but I have no idea how to calculate the correct fuse rating. Is it simply the maximum amount of amps the supply can put out (10 amps) or is there some other factor I should consider?

Hi there :)   I am an electronic musician looking for old SYNTHESIZERS, KEYBOARDS, drum machines, analog sequencers, vocoders, strange old effects and related electronic musical equipment.

In general, I'm looking for working or non-working instruments made in the late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and especially patchcords:
The more unusual, the better.

_Moog
_ARP
_Roland
_Buchla
_Serge
_Korg
_EML (electrocomp)
_Polyfusion
_EMS (synthi and vcs-3 putney)
_RSF
_Oberheim
_Sequential
_Steiner Parker
_Aries
_Synton
_E-mu
_Electro-Harmonix
_Ionic
_OSCar monosynth
_Roland   _TB-303 Computer-Controlled *Bassline

_Roland   _TR-909 Drum Machine
_Roland   _TR-808 "   "
_Pearl Syncussion SY-1
_ARP   _sequencer
_EML-400 _Electrocomp _sequencer
_Korg _SQ-10 _analog _sequencer
_Simmons SDS-5, 6, 7 Drum Brains

If you have any of the above or similar equipment which you'd like to sell, or know someone who might, please email me at rolandman1@aol.com If you'd like, please include your phone number since my email has occasionally been unreliable in the past.

Thank you very much for your time and I apologize if this posting annoys anyone.

Where exactly is the fuse and WHY was it moved (at the very least, you should add one in the primary circuit where it was originailly - to protect against a shorted power transformer I would presume.

If it is in the DC output circuit, using a value just above the maximum rating should be fine.

If it is somewhere else, you need to determine how the current there relates to the output current including losses.

High power antenna tuner built around aq EF Johnson rotary inductor (no part number) that is about 4" in diameter and about 6" long. Huge high voltage air condensers. Unit is marked as 10-160 meters. Needs some TLC but will sell for $90 plus UPS. The EFJ inductor is worth that much. Have never used it, another of those treasures that has stacked up in the garage over the last 45 years...

Greetings,

I have a Yaesu FTC-1123 VHF handie-talkie with no manual. I know about the program switch on the bottom of the radio, but can't make any sense on how to program the radio from there.

If anyone can give me directions on how to program this radio, I would greatly appreciate it.

Or if you have a copy of a manual you could send me, I would be
glad to pay for copies and postage!

PARG Press release

PARG International - PHANTOM'S AMATEUR RADIO GROUP INTERNATIONAL (PARG), will sponsor the annual Dayton Activities, Dayton Dinners, and Interference Committee activities again this year. PARG is the only visible and service orientated group for radio hobbyists dedicated to preserving the high integrity and traditional values of amateur radio, showcasing the hobby as attractive/fun for all, and promoting relationships between men and women in amateur radio. The PARG Hospitality Suite will be open to all members & guests. PARG members and friends are asked to check in on the PARG repeater during Hamvention on 443.575 Mhz (+ offset/100 Hz) for times/locations. President Justin Bousquet and Co-Founder Larry F Johnson are a part of the speaker program. Topic of discussions will include LIDS, Internet, and Amateur Radio. Please see the PARG web site HTTP://WWW.PARG.ORG or write to pio@parg.org.

I have for sale a IC-706. Includes items below:

IC-706 MKI
FL-100 CW filter 500Hz
OPC-581 11.5' separation cable
MB-63 Mounting bracket for control panel
Icom service manual (this is from icom)
All boxes and manuals

This radio was only mobile once for a road trip. Was used as a base by a non-smoker. I would like $850.00 for everything. I will pay shipping lower 48 states. I can be reached by E-mail or my phone number is 216-741-4717.

10 Kw military surplus generator. 220/110 vac. 4-cyl gas engine. Totally Self-contained. Engine runs like a clock! Gen set regulation needs heavy load to flash the field coils but runs well otherwise. Could

probably use a cleaning of the relay contacts.

Set is on an 'un-sprung' two wheel trailer which is ok for short distance
towing... would recommend it for a long trip...

Price $750 obo. Will trade for small hf mobile.

Please e-mail responses

I am trying to organize an activity to celebrate national lighthouse Day,
August 8th.
As a kind of commemorative event, I am seeking volunteer marine/maritime
mobile
hams to anchor off (or on?) a lighthouse site and work as many stations on
Aug 8-9
as possible.
The purpose is to further publicity for lighthouses and ham radio and to
have fun.
I began the idea as a Chesapeake Bay (MD) event, but word has spread thru
the
Nat. Lighthouse Soc. and I am beginning to get inquiries from other areas
(NC, FL,
CA, and Pugent Sound).
Since this is still in the formative stage, I am open to suggestions and
ideas. So far,
it's been suggested to include any present or former lighthouse location in
the world, contacting any ham station on any band by any means, using
whatever sequential number/QTH (lat/lon or lighthouse name or state)

indicator.
Please e-mail me if you have any suggestions or want to participate. I will begin a
list of participants and the lighthouse they want to be located at.
I know Aug 8 is kinda far off to plan, but in order to stimulate publicity
and send out press releases, I need to know the level of interest at least.
Please get bk to me ASAP.

Hello and thanks for reading this message

The name here is Doug. I live in Walkerton in mid western Ontario. My Son lives in Toronto very near the VE3ULR hub. I can connect to Shelburn witch is in the ulr linking system. My problem arises with getting the linking codes. My son has sent his membership in to ULR they have cashed the cheque over a month ago but we have not received anything back form them. My son has written them emails but has had no response.
I was wondering if someone could help us. A contact person, any suggestion, what ever. I don't always have time to watch this news group so would you please email me at dberry@wcl.on.ca

Thank in advance for your help 73's Doug VA3DMB

Before you spend your scarce capital or expense dollars on specialized dongle-restricted synthesis or analysis software, consider a one-time $975 investment that will obviate the need for much if not all of what you now intend to buy...

The Professional Partnership Program is a site-license providing an unprecedented level of electronic simulation and synthesis capability at virtually no cost per user. For a one-time investment of $975, the Program provides to every engineer and designer company-wide:

- Nodal Circuit Analysis with True Two-Node Port Definition
  - Unconstrained Noise Analysis
- Transmission Structure Synthesis & Analysis
  - Over 40 Single & Coupled Topologies
    - Strip (Planar) Structures
    - Wire Lines
    - Coaxial Arrangements
    - Waveguide (Non-TEM) Topologies
- Passive Filter Synthesis
  - Lowpass
  - Highpass

```
  Bandpass
   Prototypes
   Practical Reactively-Coupled Realizations
 System & Receiver Design Support
  Link, Terminal & Radar Analysis
  System Architecture Characterization
  Spurious Analysis
   Transmit & Receive
   Coincident & Tuned
   Preselector & Output Filtering
 Phase Noise Analysis
  Time Domain Effects
  Frequency Domain Effects
```

600+ Page User's Manual with Examples & References

Join the Program and you will be furnishing all of this invaluable capability to every designer, not just one! Our competitors are furious with us for having created the uniquely progressive opportunity. It seems they're still using dongles to hinder access to their own products.

Please contact me for additional information. Or, see:

Is it safe to run 6 meters if you have a local Ch 2 TV station in your area? I'd like to try 6 but don't want to mess up KPRC here in Houston TX.

rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.equipment,uk.radio.amateur

I recently purchased an ATAS-100. My experience was not that good. It tuned well in manual mode (you transmit and hold down the Mhz buttons up or down to make it get longer or shorter to resonence). In automatic mode it did not work at all. I returned it for another unit.

The new unit at first appeared to exhibit the exact same problem, no automatic operation. Then suddenly it started working correctly. Correctly means that you push the tune button, the transmitter turns on and the antenna adjusts itself for low swr and turns the transmitter off.

Just as suddenly though it stopped working. The only thing I've been able to correlate with this behavior is that if I start doing manual tuning eventually it will somehow enable automatic operation. Once it starts automatic operation it will stay operating automatic mode until I turn the rig off.

To date, in spite of several hours of trying, I cannot find any way to get automatic mode to work reliably.

The manual that comes with the ATAS-100 is a 1 pager, mostly Japanese. There is no schematic and nothing on the operation of the antenna, so it's impossible to debug the system and figure out what might be causing the problem.

Of course the bands haven't been very hot lately either.

My impression of the ATAS-100 is that Yeasu should have done a much better job with this antenna. I'm not sure if there is a firmware problem with the 847 (incidently I've tried three different 847's all exhibit the same problem, now two ATAS-100's, and two different antenna mounts) or just an engineering problem with the ATAS-100 itself. I will say that once resonated the antenna works great, but right now resonating it while mobile is a life threatening operation.

Len,
Can I humbly suggest you junk it and buy a Screwdriver antenna, it'll
eat it for breakfast in the performance and tuning department.
Yes, you can junk the auto ATU as well, you wont need it.

I reply to Len,

I bought one of these antennnas with my FT-847, mounted it on top of my Ford Expedition with a quad-leg mag mount and it works PERFECTLY. This is the best mobile antenna I've used (including the screwdriver). Are you sure you changed the menu item from TUNER to ANTENNA??? I'd do a full reset of the 847 and then setup the menu item and try again. I have had great results on 440 through 40 meters with

this antenna. I can't believe you've had all of the problems that
you've had!

>
> It is absolutely essential that no wiring bypass this system. If even one wire bypasses the system, all of the protection it offers you is lost. The use of a ground window and a single point are central to good lightning protection. There are other steps you have to take too in order to be able to operate during a storm, but these two steps are essential.

There is one thing I've never seen mentioned in all the literature I've read about lightning protection both in the newsgroups and elsewhere.

As I get ready to construct my station and ground system, I'm wondering what one should do about the AC wiring that is already in place in the room they are going to use as their shack. I'm sure that 99.9% of us will have our shacks in a room in our residence. That room will already be wired for 120 VAC and it won't be going through any "single ground point."

My plan is to bring 120 VAC and 240 VAC lines directly from the entrance panel to my single ground point and then on to my shack (through proper protection devices, of course). It seems to me that the wiring in the walls of the shack is now a liability.

Having protection at the entrance panel is nice for power line hits,

but the induced variety can still find a path to the shack if the wall
wiring is still in, can't it? Should we be removing all the wiring that
is near our equipment but not routed through the single ground point?

Seems unlikely that very many of us would want to or be able to do that.

Just wondering.

The latest "school of thought" is: If you want to preserve your
equipment, disconnect EVERYTHING when not in use. This means power,
ground, interconnects, etc.

Just what I have been reading lately.

Howdy, folks. I just launched an Amateur Radio website that is focused on HF radio. It is at http://hfradio.org - come by and visit. It is very new. Feedback is most welcomed - what is it you most want on an HF Radio Amateur website?

Current features at http://hfradio.org include

+ Propagational data, forcasts, and related information.
+ Online discussion forums (Elmer, DX, and more coming)
+ AZ_PROJ server (under development to bring propagation overlays)
+ and more...

Please stop by http://hfradio.org

Thanks.

Robert,
There is a channel 2 in my locale and many hams here (Los Angeles)
including myself use 6M without complaints from our neighbors.
However, most folks here have cable or satellite making interference
from signals at the antenna less likely. You may wish to locate a
local club, go to a meeting or two to find some 6M operators and ask
them about your local situation and any of their direct experiences.
Judging from the entries in my logbook you should have no problems
finding hams active on 6M in your neck of the woods. Though my 'gut
feel' is that you will have no problems.

Hope this helps,
73,
Howard KE6MAK

The NEC says to maintain at least a 5 foot separation from any other
conductors to prevent sideflash. Since the ground window is bonded
to the Earth terminal, which is in turn bonded to all other system
grounds, including the power entrance ground, the potential between
your station wiring and *unused* existing electrical wiring should be
sufficiently low to work with the NEC recomended 5 foot separation.
You shouldn't need to rip it out of the walls. Just don't plug anything
in the station into it.

Oddly enough, you may have no trouble if you are CLOSE to the KPRC-TV transmitter site (I think in or near Missouri City, but I'm not sure). If your neighbors are getting a strong signal from KPRC, your 6m signal is not likely to be a problem, but if KPRC is weak, even a low power 6m signal could blow them out.

Other notes: SSB tends to produce less TVI than AM, FM or CW.

You are less likely to cause TVI if you stay to the bottom of the band, away from ch 2 TV.

When 6 meters is up with sporadic-E, your neighbors may be getting interference whether your on or not - all those other TV 2 stations 900-1200 miles from Houston (WJBK, WBBM, KWGN, WPBT....) will be coming in by skip, too!

Since KPRC is an NBC affiliate, avoid using 6m next Thursday evening :-)

I think what you've been reading is the "cheapskate's guide to better lightning protection".

What is an individual going to do, pile all of their cables and equipment in the middle of the room every time a storm approaches or when they aren't going to be using it for a day or two? I'd rather protect my home, person, and property by installing a properly designed grounding and lightning protection system. The "disconnect everything when not in use" method has never sounded like much of lightning protection solution to me.

Getting back to my question about the shack wiring...If the induced energy from a lightning strike can travel through the house wiring and jump from the wall socket to damage nearby equipment, in a perfect grounding world, shouldn't the normal house wiring be taken out of the shack, and only the AC coming from the single ground point be used?

Any thoughts about this?

Thanks Gary. This is what I was fishing for.

The NEC code information mentioned above sounds great in theory, but I'll wager that regardless of where their station power is coming in from, an overwhelming percentage of hams have their equipment desks and tables set up against a wall 2 or 3 feet from the nearest outlet. Of course, an overwhelming percentage of hams are probably not addressing the grounding issue correctly anyway, but that's another story.

In most modern dwellings I think it is safe to assume that the average room will have 3 or 4 outlets, along with the associated wiring in the wall, naturally. To bring power lines from the single point ground into the shack without coming near the wiring in the walls and to place the station's equipment out of harm's way as well, sounds like a difficult (if not impossible) task for most of us.

If the wiring is left in, I'd hope that the "sufficiently low" potential stays sufficiently low. However, if it is possible without too much trauma to the house, I might be inclined to "uninstall" the wiring anyway. It might also be possible to take the wiring out and leave a string or line in its place to make putting the wiring back a bit easier. A lot would depend on the construction of the house, of course.

As I said before, I'm planning my station and ground system, gathering
materials, etc., and I've been giving this topic a lot of thought.

Hi all,

I have for a friend the following radios:

You may email me or call him at (304) 855-4678.

Ten-Tec Omni A HF rig with matching external VFO, Vintage hand mic :) and operators manual for each item. Radio is solid state with analog dial (NO TUBES!!) Sent to Factory in 1990 for a checkup and tune-up (have documentation on that) Radio was purchased new in 1979 and has worked like a champ. 160-10 meters, 3 cw filters, ssb filter, full break-in QSK. VFO allows rx of 2 freqs. simultaneously, tx/rx from radio or vfo or vice/versa. Also in vfo are 4 crystal slots for fixed channels. runs 100 watts on 12vdc using 16amps for full output! Radio is a 9 out of 10..
PRICE IS $400 SHIPPING INCLUDED.
Will trade for the following:
Prefer solid state radio!!
Yaesu 757GX
Kenwood TS820/TS830/TS530, or similar. (looking for something with DIGITAL DISPLAY, IF SHIFT and NOISE BLANKER) with vfo or speaker or whatever... let me know what u have (excellent condition, please!!)
thanks,

Randy

Hi again,
Have for sale for a friend the following radio:

IC-W21AT handheld dualbander. Includes speaker/mic, veh. power cord, hi and low cap. batteries. HAS INTERMITTENT TX AUDIO PROBLEM.. it transmits fine, but no audio sometimes. Audio cuts out with no rhyme or reason, but we suspect the speaker/mic jack as the culprit. this is the radio with the 'telephone' whisper mode so u can hold radio like handheld cellular phone. it has a mic in the radio and another mic in the battery pack for this purpose. the radio works great with dual in-band rx, cross band retransmit and rx, lots-o-features for Mr. Fix-it. PRICE IS $125 INCLUDING SHIPPING

Will also use this as 'boot' for the other radio trade (see ten tec ad) will also trade for a 1kw (rated at more than 600 watts) antenna tuner, prefer roller inductor tuner like a MFJ tuner or a Dentron Supertuner. Wish list: prefer Drake Model MN-2700 tuner.

please email me or call Slade Sowers at (304) 855-4678
thanks,
Randy

Hey, now that's a darn good idea! I even have an old one laying
around someplace to give it a try.

Thanks!

I have a Uniden trunktracker scanner for sale. $175.00. Perfect condition
including the box and manuals.

I also have a Alinco DR-130 2M mobile rig for sale. Asking $200.00 for
this unit. In good shape. Comes with mounting bracket and appropriate
plugs. Also comes with radio shack magnet mount mobile antenna

GE-PCS radio for sale. Will work with EDACS systems. Have this programmed
for Denver Co and Westminster CO, receive only. This is a hobby radio for
me. Will sell for $400.00 firm.

Will sell all radios at once or one at a time. If you're interested,
please email me at

N0VLD@yahoo.com

for those of you who don't know. the 0 in N0VLD is a zero, just incase
you're not familiar with ham callsigns.

Jack

I was just fortunate enough to be the benificary of some old QST's from a friends' Grandfathers estate...

So.. I grabbed the Dec 1959 issue off the top of the stack... here are some observations and thoughts:

The Collins KWM-2 Was HOT! Lots of ads for it.. and only $1095.00...
A Hornet 3-Band, 3-Element Beam was $49.95...
A Spaulding 48' Tilt-Over tower was $176.21...
Radio Shack was selling Collins Equipment (75S-1 Rcvr, 32S-1 Xmtr, 312B-4 Spkr), only $27 Down...
Burgess Battery Company was still in business...
"CB" was not a dirty word, and 11Meter gear was being advertised
(of course you needed a license for CB then too ... :)
Heathkit had not yet reached it's pinnacle with regard to ham gear...
(They had nothing to compare with Collins/Gonset, etc. top of the line stuff)...

There were a lot more of the little cartoons spread throught QST (I miss those! let's get them back in QST! Jeeve's we need you!)

Found a real neat/interesting design for a 1KW linear.. :)

Most of the businesses advertising in Dec 1959, are no longer in business.....
But... they have been replaced by new companies selling similar products...
So... what does that tell us?

Speaking of the "cartoons"... miss those scruffy looking cats that let us spot those "Strays"... which were one of the more enjoyable aspects of QST to read :)

Here's a few choice strays from Dec, 59'

"K4PPR, whose last name is Beam, lives at 73 Grid Drive"

"WA2BWT reports the FCC's sense of humor is still in high gear. They issued WV2BRA to his cousin, a YL."

"W2YVP says he got a QSL from W1RJA confirming a QSO that took place eleven years ago, but doesn't tell us how come it took so long to get the card."

"W1SS conducted tests with several other members of the SDL net on the morning of the eclipse in New England, Oct. 2. H reports that he himself was in the path of the darkened area and that all the net stations he worked were outside the path of the eclipse. All these stations reported sizeable increases in his signal strength during the period of the eclipse."

* * * * * * * *

Also got a copy of the 1956 Radio Amateurs Handbook....

The "Amateur's Code" changed a bit... "Gentlemanly" is now "Considerate"... an appropriate change.. other wording has been "modernized" ....

It seems as though too many hams today ignore the code, especially the "Considerate" and "Friendly" parts... If the flames and name calling in these newsgroups are any indication...

The ARRL seems to be more interested in marketing ARRL products than anything else... I went up to the ARRL web site, and tried to find the Amateurs Code... couldn't find it... (I did find out how to order an ARRL coffee mug...)

Ham Radio hamfest and swap meet in Weatherford this weekend at the
National Guard Armory.

Saturday only, 7am - 2pm

Test sessions, product demonstrations, prize drawings, major equipment
swap meet market, info on getting involved in ham radio. $4 at the
door, free parking.

Talk in frequency is 147.04 MHz 110.9 pl, so listen on your 2 meter rig
or on your scanner for directions.

Have fun

David

I have a TS520 hf rig I would like to sell or trade for a good HT... would
like an older dual-band, but will take newer 2m. An MT1000 would be perfect
as well (VHF, complete).
  the 520 works great, face in good cond., case fair (cosmetic, no dents)
Will sell outright for $200.
email for details or phone number!
thanks,
Randy

Radio controll airplanes and cars and boats don't seem to have any problems with interference, but I bet the modelors get their heads together BEFORE the contest to make sure of sufficient distance from each other frequency wise. I bet one of them will probably help you out right here.

From March 1959 QST - Letters:

Quote:

Editor QST:

All hams know that 11 meters is no longer an amateur band, but few know what its new use is or how it might be an even better "ham-band" than it used to be.

The major portion of the band was divided into 22 channels for two-way communications use under the new Class D Citizens' Rules. Basically the rules are as follows: no operator's license is needed; a station license is necessary, but it may be obtained by filling out a simple form; the license is for equipment only and all units are classified mobile; 0.005T frequencey tolerance; t watts maximum power, a.m. only; lea-in 25 feet maximum.

Most hams don't see the possibilites that this presents. First of all, equipment can be home-built. As five watts is the power limit, there can't be any "millionaire stations" drowning you out. All units will be on the same basis. Furthermore, since no operator's license is needed, the wife can use the rig and so can the kids.

As for crowded channels, tone-modulation is permitted to operate squelch systems; you can't do this on the ham bands. There will be a good deal of experimenting to get a feceiver that will dig down for the weak signals. Conversations are allowed with all stations and there isn't any law stopping you from having channel switching. In the real ham spirit, there will be many more chances for helping out the outher guy in both relaying messages when he is out of rang with his home station and in giving help with repairs. A second class phone license will be needed for servicing or aligning the equipment, but any ham shoul d have little trouble passing this test.

Just imagine: no more kilowatt interference, no more multi-kilobuck rigs and no more swishing v.f.o.s! I don't know about the rest of hamdom, but I've filed for my Class-D license and have started on the new rig.

For the full rules and regulations drop a dime in an envelope along with a request for a copy of FCC Rules, Part 19, to the Superintendent of Documents, Government Printing Office, Washington 25, D.C. See you on 11.

--Arthur Human, W2HQQ/1

:End Quote

The thing about this letter that amazed me the most.. was you could get something from the government printing office for a dime, and second you could put a dime in an envelope and it would not be stolen before it reached it's destination..

As to Arthurs opinions... wouldn't it have been nice if "CB" turned out the way he envisioned it.. according to the FCC Database Arthur is now living in Florida and still has a valid license.. If your reading this Arthur... I'd love to hear your thoughts today :)

And a few "Stray" for those of you who asked :)

"The seven-year-old girl called out to her mother, "mom, you'll have to shut off that food mixer because you're bothering Mr. Moody's (K4VFM) short-wave radio. I just heard him sa so on the television." K4VMT."

"When G3LWS (also ex-ZC4FB) was operating from the South Shetlands as VP8CZ several years ago, he discovered one day (after having successfully maintained schedules with the rest of the world for 12 months) that there was a six-inch gap in what were supposed to be feed-through insulators carrying the antenna through the wall of the building. So, except for some sort of capacity coupling through that gap, he was in effect operating with an antenna that consisted of about 18 inches of wire between the transmitter and the inside end of the feed-through insulator."

Enjoy :)

Tom

Peter,

What will the transmitters be sending and how much power? If the control parameters permit you may want to try some kind of packet transmission or sequencing. Running the transmitters at the same time will work as long as the receivers are able to discriminate between the signals.

For example if the bandwidth is small - pulses (on off) at a low data rate it would be quite easy to fit 4 transmitters into that band. On the other hand if it were video you would have a problem.

/Len

RC stuff usually only operates on one frequency but modulates the frequency to tell the plane to move the rudder or ailerons or to tell the car to turn left or right.

Has anyone tried operating 4 radio transmitters in close proximity to one another? I need to do this for a robot contest, and wish to select the frequencies to avoid interference. There will be 4 robots operating simultaneously, each on a separate frequency. The transmitters must all be in the range of 75 MHz to 76 MHz (surface model control band).

Please reply by e-mail to peter.gregson@dal.ca.

Thanks in advance,

Peter Gregson

I think that was the original Radio Shack, a radio/electronics store in
Boston which was bought out by Tandy just to acquire the name. (Or so I
understand.)

I have a Uniden trunktracker scanner for sale. $175.00. Perfect condition
including the box and manuals. BC-235 handheld.

I also have a Alinco DR-130 2M mobile rig for sale. Asking $200.00 for
this unit. In good shape. Comes with mounting bracket and appropriate
plugs. Also comes with radio shack magnet mount mobile antenna

GE-PCS radio for sale. Will work with EDACS systems. Have this programmed
for Denver Co and Westminster CO, receive only. This is a hobby radio for
me. Will sell for $400.00 firm.

Will sell all radios at once or one at a time. If you're interested,
please email me at

N0VLD@yahoo.com

for those of you who don't know. the 0 in N0VLD is a zero, just incase you're not familiar with ham callsigns.

yes indeed. In fact even during non-contest casual flying the transmitters are impounded, and only one transmitter on each frequency is allowed out of the impound at a time.

Randy OM,

  That is an EXCELLENT price on your TS520.  Those rigs are well built
and can last a lifetime.  Perfect rig for anyone to get started on HF.

I played with one At HRO. The audio is excellent, best audio of all the
HT's. Otherwise has all the bells and whisles as the others. It does have
only one band rx rather than dual vhf/uhf rx. Last QST has a HT
comparision article.

Well I think you need to look at the Icom T8. Has all the features of the G71A with 6 meters and FM broadcast band (76-108). Will also cover 800Mhz with cell block and a couple of other frequency rangers as well. And the audio is just as good if not better than the G71A. Same mil spec rating and smaller. Comes with a nickel metal hydride rather than a ni-cad pack and is $30.00 bucks cheaper!!!

I disagree, I've owned them both and found the G71A's audio to be superior. I found the G71A audio to seem lounder and at maximum volume setting the audio quality suffered on the FT50. I also found the FT50 unusable in a high RF environment, the G71A was usable. I've owned both and recommend the G71A over the FT50R.

NFM DISCRIMINATOR CHIPS - BASEBAND AUDIO - SQUELCH GATE DATA

There is a growing interest in tapping the baseband audio out of various scanners for decoding of a variety of esoteric signals, including CTCSS, SCA, FSK, RTTY, FAX, etc. By and large, such signals cannot be taken from TAPE REC jacks, headphone jacks, and EXT SPEAKER jacks because of the voice-band filtering that is done between the signal source and these output jacks.

Therefore, it is necessary to tap the "baseband audio" directly at the output of the discriminator chip for your scanner. Table 1 shows a list of scanners, the discriminator chip(s) used in the scanner, circuit symbols of those chips, and three pins of general interest on the chips: RF-Input, Scan Control, and, of course, the baseband audio (discriminator output) pin.

Even though your scanner may not be listed below, try to find its discriminator chip, and chances are it will be listed with one or more scanners below, the pins of which will be the same for your unlisted scanner! Corrections and additions to this list are requested. See my mail and other addresses at the end of this file.

For hookup information, see just after Table 1.

TABLE 1: SCANNER DISCRIMINATOR CHIP PINS OF INTEREST

HOOKUP PROCEDURE
================

If you need the raw Discriminator baseband audio signal for external purposes, the best way to access it is via a jack installed in a convenient, unobtrusive location on the scanner.

1. Install an RCA or other jack in a desired place on the scanner's external case, typically the rear panel.

2. Connect the shell or outer frame part of the jack to scanner chassis ground.

3. Connect the (+) leg of a 2.2-uF to 4.7-uF tantalum capacitor to the Discriminator output Pin. (Capacitor should be tantalum, but can vary in value from 1.0-uF to 10-uF at a voltage rating of 25-50vdc.)

4. Connect the center conductor of a shielded coax (RG-174, etc) or shielded mic cable to the (-) leg of the capacitor.

5. Connect the shield of the cable at this end to a nearby PCB ground trace or spot.

6. Connect the center conductor of the other end of this cable to the center or hot lug of the jack.

7. Connect the shield of the cable at that end to the ground lug of the jack.

8. Fabricate or buy a shielded patch cable with one end to mate with the new jack on the rear of the scanner at that end....and the other end to mate with whatever jack is on the tape recorder, processor, decoder, or whatever device is to be connected at the other end.

"SCAN CONTROL" AND SQUELCH PIN DATA FOR UNIDEN SCANNERS and Realistics made by Uniden

Uniden does their darndest to make it difficult to hack their scanners. You guys have some work to do. Here's the deal: Even though all NFM discriminator chips have a SCAN CONTROL pin, Uniden doesn't always use it! Some Uniden scanners have a separate Squelch circuit with the SCAN CONTROL pin on the discriminator unused! You have to find the real Squelch circuit, and then determine the Logic for that circuit. It's easy, but differs from one scanner to the next, and I can't cover them all. I need your help.

See Table 2 below for a good reference. By and large, those with scanners of Uniden origin have to tackle the preliminaries in this fashion:

1. Locate the NFM Discriminator chip - you will find the Audio pin from Table 1. It remains valid.

2. Determine if the SCAN CONTROL pin on that chip is used. (Follow its trace out on the PCB)

    A. If so, then determine the logic order. If the SCAN CONTROL pin is used, then we can use it!

    B. If the SCAN CONTROL pin is not used, then locate the real Squelch circuit. The schematic and block diagrams in the service manual will be helpful. Uniden uses chips like NJM2902, NJM2904 & NJM3403 to generate Squelch logic. Use your voltmeter to find a spot where the Squelch logic is 0v and 5 or 8v, depending on the setting of the Squelch control. Table 2 shows details for those Uniden-made scanners with which I am familiar.

TABLE 2
UNIDEN SQUELCH CHIPS
Updated 3/31/98

Scanner	SQ Chip	CktSym	Pin
PRO-26	NJM3403AV	IC-17	7
BC-890XLT	NJM2902N	IC-8	7

Thanks for stopping by. I have acquired a Kenwood TM201B for thirty
dollars!! Yes, there was a catch; the display does not work, and I hope
in that of a snowballs chance in hell someone might have a service
manual for it. The rig is about 1986 vintage. Also, if someone might
have the TU-3 tone board, that would be nice too.

Tnx es 73 de Jason n1iic/ag (I upgraded last weekend!! YEEEE HAAAAA!!!)

None on Saturday that I know of but on Sunday LARK has the Livermore swap meet. Of course that depends on the weather... Right now it doesn't look good but you never know. Maybe someone else knows of something on Saturday..

Good Luck... have fun while your in the area..

Hello   I recently purchased an RCI-2950 and I need the power cord connector to go to my power supply. It has a connector with 3 female parts that fits on the radio and this make the red and black leads for the power supply. If anyone knows where I can pick one up, Ill be very greatful. Ill pay damn near anything for this! Please help

Not sure if I posted this already, but... I have 2 MC-50 desk mics for sale at $50/both. One mic is in great condition, works great, other mic looks rough, base is great, works ok but has hum... inside base is evidence of many rewirings, and I believe the audio leads being reversed is the only problem. Please email if interested! Buyer ships COD/CONUS or prepay.
thanks,
Randy

Posted this in a prev. msg... but it was kinda lost in the questions..
Have Motorola headset/mic, behind the head for use with cap, etc, like the 'Nascar' guys use except black. Dynamic mic element. Could use earpads, these are a bit too mushy.. has top velcro adj. strap and coiled cord. Boom adjusts in/out, hinged halfway and mic pivots. works great! it's a 4pin plug now, but have the factory barrel plug (4contact) desoldered, not cut. It's model NMN6064A SP04 if u wud like to look it up at Motorola's website or elsewhere. List new: $500 Priced at $90/firm/uship Please email if interested!
thanks!
Randy

Well, for the record: I ended up buying a "beeper case" in a local uniform shop. It was made by "Duty Man" and is a black utility case used by law enforcement to carry beepers. I have used it and it works well for what I wanted. Best of all, it protects the battery from the elements and is hand to clip on to any belt. Thanks for the ideas.

There must be someone in Western Canada, or countrywide for that matter, that can progam my Standard HX340U uhf 8 channel handheld for me....but who??? I'd also like to find a manual or atleast an explanation as to what the 3 small pushbuttons marked L S M are for.

Gimmee a shout, please.

One of my friends in Russia asked me if I can find some sort of straight key for him. It should not be fancy -- just DIFFERENT. If you have something like this collecting dust in your garage, and ready to part with it -- let me know.

I have for sale two Kenwood all-mode mobile transceivers. A TM-255 2 meter rig and a matching TM-455A 440 rig. Both rigs come with separation kits, mikes, mounting brackets, power cables, manuals, and original boxes. The TM-255 is a 55 watt rig, the TM-455A is a 45 watt rig. Both are in excellent physical and electrical condition, a 9+.

I am asking $500.00 for the TM-255 and $400.00 for the TM-455A. If you buy them both you can have them for $850.00 and I'll throw in the factory service manuals too.

Prices are US Dollars, and do not include shipping costs.

Thanks and 73,

Dino Kitsios, KF6ECO

I wasn't sure how to answer a question that I was ask recently. Anyone want to help me out with this one?

Q: Is there any non amateur HF communications license available?

They are looking for point to point and point to multi point Long range communications system. Portable, mobile and fix station operation. HF only no satellites. Need multi freq coverage for US communications day and night. Dont need 100% reliable at all times but daily or several times a day comms for status and supply request. SSB a must, RTTY would be a plus.

There is a NEW C.B. Radio/Ham Radio/2 Way Radio in general mailing list and it's ran by myself, and it needs some people that like to post good quaility stuff, if you'd like to be a part of the list go to http://www.chucks2way.com/list.htm and enter your e-mail address and the system will send a confirmation via e-mail, reply to it and you're on the list.... System is a little slow responding, but give it a few minutes, but it will reply.

Anyhow, enjoy!

I have a HTX-212 with a weak microphone. You basically need to yell into it to be heard at normal levels. Does anybody know if there are any pots that can be tweaked on the main board to help remedy this?

Thanks,

Steve

Graham, the TS-50S should NOT transmit when in CW mode unless:

(1) A key is inserted and depressed, OR
(2) A key is NOT inserted, but the MIC PTT is pressed.

The CW key jack actually has two sets of contacts which are closed when the key IS NOT inserted. Both sets of contacts open when a key IS inserted. When the key is closed, one of the circuits that was broken when the key was inserted is closed for the time that the key is depressed. The other set of contacts stays open all the time that a key is inserted.

I *THINK* that the set of contacts that stays open all the time when the key IS inserted is used to inhibit the unit from transmitting when in CW mode if the key IS NOT inserted. This would be necessary, since the first set of contacts I mentioned above are normally closed when a key is not inserted, which would make the unit transmit if there was not some sort of inhibit circuit present.

I think you must have an open circuit somewhere in the second set of contacts that is used to inhibit transmit when the key is not inserted. It would be my guess that the contacts within the jack assembly are most likely. Try spraying some contact cleaner and repeatedly insert and remove a key plug to "wipe" the contacts. If that doesn't work, unplug and clean connectors CN103 on the FINAL unit and CN16 on the RX-TX unit. The keying circuit passes through these connectors.

The TS-50S is a great little rig, even if it's already been out for five years. I like it better then the competing ICOM and ALINCO rigs.

I'd be interested in knowing how you correct the CW keying problem.

73....Mike / KK5F

You might want to contact Radio Shack Technical Support at
1-800-THE-SHAC for your answer on that one.  Might be a case of a
problem in your audio circuit or somehting wrong with the actual mic

The RS speaker mic is notorious for that problem. Either use the mic built
into the front of the radio or buy one of the ICOM speaker mics that will
also fit that radio.

Sorry, but the HTX-212 is a 'mobile' rig. The HTX-202/404 are handhelds.

OOPS! Mea culpa.

Low audio is such a common problem on the 202 w/ speaker mic, with the 212
often exhibiting just the opposite problem, I put my keyboard in gear a bit
too quickly.

Sorry for any confusion.

Hello,

if you are interested in experimenting with Highspeed Packet Radio (9600bd) and want to save money instead of buying a $$$ 9k6 TNC, make your own cheap&simple modem, developed by Chris - OE5DXL
At this moment there are drivers available for Atari (L2STX),   PC DOS (L2PCX) , PC Windows and LINUX.

(for atari ST the driver L2STX also can be used for 1200bd baycom alike modems, PC users can use Baycom driver for 1k2 modems)

More info and files/links you can find on my webpage at:
http://www.qsl.net/pe1nib/index.html

I am looking for an Icom R10 scanner. Must be in excellet cosmetic,
perfect operational condition with manual, and priced right. Prefer
with full scan (not blocked), but will consider all offers. All offers
will be answered. Flames will be ignored.

Thanks,

David, WA7ZYQ

Thanks for the help folks...

I experimented a touch with the mic, and removed the little black disc that covers the mike and it's been working alot better since. I'm not sure if that was the problem or if I inadvertantly fixed a problem while looking at it. Problem solved as of this minute...

But another has surfaced, but with the newsgroup instead....

I cannot find anywhere on my ISP's news server the FIRST message that Dick sent me regarding the mistaken 212 with the 202. Why could that be?

I'd appreciate any input...

Thanks again,

Steve Weaver

Your news server probably already deleted the message. They are only
kept a certain length of time. Go to www.dejanews.com and do a search
for the message.

The Ham guy is probably just a cber with a no code tech licence, if that. Why would he hang on this ng if he thinks we're so bad? A lot of the posters on this ng know more than most hams anyway. A lot of them are hams who like cb also. CB is more colorful than ham. Ham can be a little boring. At the ham fests look at all the nerdy looking people with their hts strapped to their belts. And they look down on CB.

Holy Cow!

WiNRADiO (the company) just went 'open architecture' on their API and commandsets for WiNRADiO (the radio). They've released developer information up the gazoo such that there's something for most everyone now.

Like me. All I know of programming is that it comes on radio and television. But using their developer information, I rapped out a quick macro to run from Microsoft Word 97 that demonstrates how easy it is to control WiNRADiO via DDE (Dynamic Data Exchange).

A slight variation on the below macro would work in MS Excel, too. Possibilities are limitless.

```
============================================================
Sub WinRADIO()
'
' WinRADIO Macro
' Macro created 03/15/98 by William D. Cheek, Sr.
'
    channel = DDEInitiate("WinRadio", "WinRadio")
    DDEExecute channel, "[PowerOn][SetFrequency(162400000)]"
    DDEExecute channel, "[SetMode(FMN)][SetVolume(7)]"
    DDEExecute channel, "[AttenOn]"
    ss$ = DDERequest(channel, "GetSignalStrength")
    Selection.TypeText Text:=ss$
    gf$ = DDERequest(channel, "GetFrequency")
    Selection.TypeText Text:=gf$
    DDETerminate channel
End Sub
=============================================================
```

The above macro is run right from MS WORD (word processor) and it does several things: Turns power on; sets the freq to NOAA's 162.400 MHz; sets the NFM mode; adjusts Volume to "7"; turns on the ATTenuator; fetches signal strength and frequency and inserts the values into the Word document.

Yikes! Too cool! But there is a whole lot more than just open code for DDE. The company has created a Web page for C++, Delphi, and VisualBasic programmers as well! Also for pure MS-DOS and maybe even other environments. Ya gotta see it to believe it.

http://www.winradio.com/home/developer.htm

Try the above for starters. It's a real eyeball opener!

Now let's see Icom step and fetch to catch up, especially since they've gone on record to close their developer information to any but "qualified developers", whatever the heck THAT means.

"Open architecture" is what propelled the IBM/PC to greatness. You sure can't fault WiNRADiO for taking that step, but you can cast a raised eyebrow toward Icom and others who withhold information about their platforms.

Hello,

        Thanks for reading our "Press Release". We are excited to
announce the Release of "The Original Southern California Repeater
Location Guide". This exciting and most up to date guide available is
now on the Net. With the most complete listings of all Open and Closed
repeaters for 2-meters, 220 MHz, 440 MHz, 1.2 GHz, 6 & 10 Meters in
Southern California, you will see why this guide is one of the most
sought after directory available. Find out more at...

NEWS FLASH!!!

It is now well known that Johnny Mackey's 20-yr span of severe, debilitating migraine headaches has come to a sudden and dramatic cessation. But in the words of the immortal Paul Harvey, here is "the rest of the story"........

Seems that our good man Mackey suffered utterly horrible headaches for the last twenty years. He went from doctor to doctor and clinic to clinic seeking relief that did not come. No one had any answers; medications had no effect. Exploratory surgeries offered no clues.

Finally, Mackey heard rumors of a miracle doctor down in Mexico who could cure headaches. Spending his life savings on a bus ticket and travelers checks, Mackey headed down into the bowels of old Tijuana, Mexico, to see the legendary miracle doctor.

The doctor went over Mackey with a fine toothed comb, from head to toe....and after a few days of rigorous testing, he declared to Mackey that while he couldn't find the cause of the headaches, he *could* definitely cure them once and for all.

He explained that somehow the problem was centered in Mackey's reproductive system and that castration was the ONLY way out. At about that time, a monstrous migraine hit Mackey with such force that he readily agreed to the surgery on the spot. "Anything!" declared, Mackey, "Anything to relieve this pain!"

Castration was summarily performed on the spot, and within minutes of coming out from the anesthesia, Mackey declared that he couldn't remember feeling so good! The headache was truly gone! What a feeling!

Mackey returned to Oregon, euphoric, elated and so inspired that he managed to land a job at the county sewage treatment center on the first try.

Prosperity and happiness looming for the first time in his life, Mackey decided that the first step for his "new life" should be to buy a whole new wardrobe from head to toe.

Shopping in one store, Mackey decided that new underwear were in order, too, so he asked a grizzled old salesman for size 34 BVD's. The salesman, having been around for a long time, looked quizzically at Mackey's humongous midsection and politely suggested that size 54's would be much more appropriate.

Mackey huffily declared that he'd been wearing size 34's for twenty years and there was no damn sense in changing now. The wise old salesman scratched his chin for a moment, and casually replied:

"Well, now son, that may be so, but don't you know that wearing too tight underwear causes headaches?"

.

.

Ya, right, a cber just one step away from jail. Selling 10meter amps commercially is VERY illegal. Hams are allowed to modify just one amp a year for 10meters.

The March issue of Communications News reports that WWVB
has increased it's broadcast power to 23 kilowatts, double
what it had been previously.

As the magazine points out, WWVB is NIST's low frequency
radio station providing time of day and other information
to many users around the country. The increased power
output should increase the useful range of the station.

Hello,

Thanks for responding to our Press Release. We our excited to
announce the all new 1998 line of Ham Radio Repeater Directories. They
can be found at...

http://www.rotd.com/worldxn/

These exciting directories are great for Amateurs on the move, or those who would like to take advantage of the many Repeaters in their Area. We encourage you to visit our site and would appreciate any feedback you offer.

Looking to Buy/Trade for Autopatch setup that will work with a Radioshack HTX-202 Handheld (at first) and later can be hooked up to a standard Moble Rig (adi-146 50 watt moble rig)

Have Sony Playstation Modification Chips (3 which sell for 10-30 dollars each) and a CD-R which I can burn your favorite Library of information onto (got a favorite webserver? or Dir on cdrom.com?)

and can also pay cash (but extremely broke, thats why I hope to trade something)

Let me know!!

Brad

Anyone interested in building a STinG driver ? That'd be fun I guess ;-)

Cheers Peter

Posted as a public service for information only. I do not sell nor have available the WR-3000i..

WR-3000i-DSP Signal Conditioner

The Signal Conditioner is a standard digital signal processing "applet" now supplied as part of the WiNRADiO WR-3000i-DSP receiver software. This feature provides high performance post-demodulation audio filtering, which is particularly useful when receiving AM, CW and SSB signals.

To run this DSP applet, select the corresponding item in the WR-3000i-DSP menu (ie. 'DSP | Start applet | Signal Conditioner').

The following controls are available:

1. Bandpass Filter enables the audio 'brick wall' band pass filter. See '6' and '7' to tune the filter response in real time.

2. Noise Reduction enables adaptive random noise filtering. This option works better for higher signal-to-noise ratios.

3. Auto Notch enables adaptive automatic heterodyne cancellation. The Auto Notch eliminates multiple tones from the audio spectrum. This is very useful to cancel 'carrier whistles' while receiving SSB-modulated

signals.

4. Marker Tone activates generation of audible tone with its frequency equal to the center frequency of the pass band of the filter. This is a useful guide for tunning-in on CW signals. The real-time FFT display provides a complementary visual guide.

5. Gain sets the pre-processing numerical gain of the signal inside the DSP. This parameter helps to resolve the 'signal-to-noise vs. audio distortion' trade-off. If the filtered signal sounds too distorted, choose a lower gain. The 'AGC' option activates an automatic gain control algorithm. This function does not replace the main 'hardware' AGC of the actual receiver, as it is applied only inside the DSP as an automatic numerical amplification adjustment.

6. Low/High/Centre/Width parameters control the corresponding pass band frequencies of the filter. The two pairs (Low/High and Centre/Width) are synchronized, so that a change in one parameter is subsequently reflected in the others. The entered numbers are rounded to 10Hz steps.

7. Interactive filter tuning control is one of the most impressive features of this facility. You can independently drag the lower and upper transition bands with the mouse. It is also possible to move the entire pass band ('tune' the filter), simply by dragging the 'top' (the upper horizontal part) of the displayed filter shape. As the filter shape is displayed above the real time FFT display using the same frequency scale, it is possible to tune the filter precisely to isolate interesting signal peaks buried in noise, using the real-time FFT spectrum.

8. Real-time FFT display shows the real-time spectrum of the audio signal. The vertical range of the display is 80dB. Frequency axis marks are displayed above this display.

9. FFT Source - selects whether the FFT is computed before or after filtering of the signal.

10. Bar toggles between displaying spectral envelope and spectral lines, while Grid enables the green rectangular grid on the FFT display.

11. Exit stops the Signal Conditioner applet and unloads the DSP, so that other task (a different applet or the Sound Recorder) can be executed. It is possible to stop the applet by selecting 'DSP | Stop applet' in the WR-3000i-DSP menu.

12. About displays the version info.

13. Settings are used to store and quickly retrieve different combinations of control parameters. To Store the current setting, type any desired name into the 'listbox' entry line and the click the 'Save' button. To recall pre-stored settings, simply select the proper name in the 'listbox'. To remove a selected item from the list box, click the

'Delete' button.

The band pass filter uses finite impulse response (FIR) design, so the
phase delay response is inherently linear. This filter is also ideal
for 'cleaning up' any data mode before outputting the signal to a third
party decoder. To adjust the filter to any FSK modulated signal, set
the lower cutoff frequency ('LOW') slightly below the lower tone and
the higher cutoff frequency above the higher tone of the signal.

The advice I have always received is to get the right postage, dollars are
too valuable elsewhere and thus highly likely to be stolen.

I am the proud new owner of a Yaesu FT-50R dual band HT. I like the fact that I can directly clip on a spare battery to my belt when in the wilderness, because the clip is part of the battery (no case needed). The only problem I have with this is that I wish I didn�t have to expose the metal contacts. Does anyone know of a product (a thin piece of plastic) which clips on to this battery to protect the contacts, yet maintains a low-profile?

Please e-mail any responses.
Thanks

My plan depends on how bad I want the card.

1. Desperatly.... Send stamps of the country on the envelope
2. Need it but not badly... Send 1 IRC with SAE
3. Want to take the chance I'll never hear from them again. $1 cash
4. All else via bureau.

Don't use 1 and 3 often and seem to get pretty good returns with item 2.

Good luck... Remember, the anticipation of receiving the card is the best part of QSLing... (At least that is what they say).

I haven't had a problem but don't leave it on long.   Your right it could be
a problem in the heat.

How about a wide rubber band?  A 3/4 inch piece of bicycle inner tube might
do it and wouldn't look too bad.

What do you do about adhesive residue? On particularly hot days this could become a guncky mess. Not trying to shoot you down Mark, but I have not had good luck with electrical tape coming off cleanly (maybe I'm buying too cheap a grade :-}).

Try some stretch wrap made for wrapping foodstuffs. A small patch that wraps partiall around the case might be the ticket. No residue and quite reusable. You might be the brunt of a few good natured jabs, but you will not short out your battery pack inadvertantly. Which, by the way, is made tougher from the get-go as Yaesu was smart enough to recess the contacts.

Hope this helps.

Rich:
I suggest that you send a written complaint to the U.S. Attorneys' Office in Concord, New Hampshire. This probably would force N1LSW to hire a attorney. Thankyou for alerting us honest people.

Charles Francer

Whats the point of covering the front contacts? theres hundreds of radios
with drop in charge contacts that are always exposed... in fact, the 50r
has a set of those charging contacts on the bottom. no need to worry, the
chances of something actually creating a bridge.

What is a good rig and antenna for city-dwellers? I wan't to put my bbs on
packet radio.

I've had my ticket for 2-1/2 years and still don't have a radio. I'll trade
a PC for a cool radio to learn on. 2-meter?

For Sale : Excellent IC-761, works fine, some wear on a few of the lettered pushbuttons, but no other defects and have replacement button kit. This was ICOM's top of the line tranceiver in the late 80's. Built in twin 500 Hz CW filters, antenna tuner, power supply, manual, long list of features. Must sell to make room for computer in shack.

Sacrifice at $850 shipped in US.

Alan, N3BJ
Bent Mountain, VA

The only thing an MT500 is good for is target practice.
I recommend a .308 seems to do the job.

```

I have for sale a IC-706 and AT-180. Includes items below:

IC-706 MKI
FL-101 CW filter 250Hz
OPC-581 11.5' separation cable
MB-63 Mounting bracket for control panel
Icom service manual (this is from icom)
All boxes and manuals

AT-180 (auto tuner HF+6M)

This radio was only mobile once for a road trip. Was used as a base by a non-smoker. I would like $1150.00 for everything. I will pay shipping lower 48 states. For another $150.00 I will include a Timewave DSP 59+ (latest software). Unless it is sold first. I can be reached by E-mail or my phone number is 216-741-4717.

I will think about spliting up the 706 and the tuner.

Mike

Well, I thought the GP68 was the european version of the ht1000.... maybe
that's the gp900. (So whoever I said that to- I'm wrong!) I don't know
anymore.... :) It's getting too darn hard to keep up with!! So, could
someone please fill me in on the GP68 and why they are selling at FRS
prices??
thanks!
Randy

Mike,

I'm interested in your AT-180 tuner if you split up the radio.
Please advise as to price. Thanks and 73   Ed K2SNK

Euro-spook radio. Not for sale, legaly, in the USA. It is a keppad
programable radio like the JT-1000, but again not type accepted in the
USA. VHF is 136-172 MHz, UHF is 438-470. Uses GP-300 Mic. They are longer,
and narrower than a GP-300. Thats what I know.   BiLL

Hey Mezgie

That was quite a bar room brawl on 3950 tonight, no??? The Field Mice got their tails caught in the mouse trap.

Now it's 4.30 AM and guess who shows up on 3950????

None other than W5VVI, playing suck-butt with Side Car Sidney and Knothead Don Smith. Lying as he usually does, he's claiming he missed everything on the radio tonight. Says he just got up, and doesn't tape anything on 3950 anymore.

Hey, if you believe that, there's a replica of the Brooklyn Bridge right out here in Southwest Missouri you can buy real cheap.

Norm just finished blaming me for the current state of affairs on 3950, that I started it all. Everything was fine and dandy on 3950 until I showed up and caused all the trouble. Never mind I've bee off the air for nearly 2 years, I'M STILL RESPONSIBLE.

What a bunch of crap. Well, if hams are bored with what they're doing on their usual frequency, they can alwasy tune 3950kc's, 10PM Eastern time every Saturday night for hysterical entertainment, nonstop jamming, nonstop finger-pointing, and limitless foolishness from the Blowhard of New Mexico, K5BLB.

I didn't get around to my post for Kevin Alfred. No big deal. He's ok, but he's just got too fat a head is all. A little dash of humility would go a long way. If he helps tie Sidney's tail in a knot, then that's good. Do you remember when Vic and the Girls used to play footsie with Dave and Norm?? They thought they could appease the Devil but, as MUR said, ""IT JUST DOESN'T WORK THAT WAY"".(got that on tape, by the way). Gee, who used to say that all the time """I GOT IT ON TAPE"". Right you are, none other than W5VVI (vivacious vindictive idiot), colleague of WA9KJI, King of the Jammers. Yessiree, W5VVI, now on 3950 as I write this, bitching about jammers, whereas for ten years, he has defended the worst jammer throughout the entire history of ham radio, WA9KJI. Sort of sounds like the pot calling the kettle black, no??? Yessiree, WA9KJI, who has jammed 3950, 7250 and who knows what other frequencies with his tape collection, probably a lot of it made by none other than W5VVI. And they want to bitch about jammers, that everyone that disagrees with them are Nazis. N5OUG says tonight that you're all Nazis. You're not supposed to criticize the government for running us into a 4 trillion dollar debt, causing numerous wars, etc. I guess the public should just be happy for all this crap and enjoy it. If you complain about anything, YOU'RE A NAZI.

If you recall, I tried to explain a few things to you back in 95 or 94
about W5VVI. If you think this guy is benign, think again. What's going on
right now proves otherwise.

ah yes, isn't the world interesting?

Catch ya later mezgie dog.

I plan on installing an Icom dual band (2m / 70cm) on the boat this season, and
am looking for ideas on what to use for the antenna. Obviously beams and
ground planes are out.

It's a small boat, 20 feet, and the antenna will be mounted on an aluminum
't-top' about 7 feet off the deck. Ideally, I'll mount the unit on a stock
'ratchet' mount allowing me to fold it down flat for travel and storage.

Any help or real-life experiences would be appreciated.

Mike Mentuck

Hello All:

Thankyou for reading this item. I am asking for $115.00 plus a few dollars for shipping and insurance depending upon shiping mode and location.

I am selling a new Radio Shack Power Amplifier. Perfect for mobile and stationary use. Catl. No. 19-1122. Some Features:

o 30 watts output
o Low Noise GaAs Field Effect Transister (FET) pre-amp
o Accepts 0.5-5 watts input
o Double Tuned Helical Band Pass Filter cuts intermodulation
    distortion - This is a must
o 13.8 Volts Direct Current

Originally, I purchased 2 amplifiers for 2 cars and only used one. This one is brand new, Never Used.

I Need the following manuals:

Heathkit IM-11 VTVM
Heathkit IP-17 HV Regulated Variable Power Supply
Heathkit IT-28 Capacitance Checker
Heathkit T-3 Visual/Aural Signal Tracer
MFJ 204B Antenna Bridge
MFJ 470B Deluxe Electronic Keyer

Copies are ok if they are good quality.. please let me know what you might have and price :)

For Sale

MPAC-----UHF Repeater by Aerotron

This commercial repeater has been retuned to 444.350 transmit 449.350 receive with preamp. Transmitter is 40 watts out, this repeater has been in service in Hatfield, Arkansas for the past 5 years. The repeater has its own power supply 110volt also has CTCSS multiple tone boards. Repeater can be used in PL mode or non PL mode. Also has a complete set of manuals. Repeater does not include duplexers.

I am asking $800.00 for the repeater and I have a 90 watt amplifier that I will sell for $100.00 with the repeater.

I also have a DB 440 8 bay repeater antenna which I am asking $150.00 for with or without the repeater.

Will sell the total package for $975.00.

I will be at the Little Rock, Ar hamfest on 4-24 and 4-25 and will deliver there or you pick up in Hatfield, Ar.
Or call me at 870-389-6516
Thank you George N0EOQ

Mike-

Look at the dual J-Pole (2m 70cm) in the ARRL Handbook.
I've use one (homebrew) for 2 years on the stern of a
36' sailboat and it works FB.

I have built KC4ES's level converter (QST 9/91) and it is working just fine.
I have also installed the 8251 and 4040 chips on the computer board in the

rx. I can trace the signals from the computer all the way to the rxd pin of the 8251, but I get no signals out of the 8251. The clk pin on the 8251 is always high (i.e., no clock signal is present).

Is there a jumper/diode/resister that has to be added/removed when the computer interface is installed? I would appreciate it if anyone who has added the factory interface kit could provide me a copy of the manual that describes the installation and other details. I already have the command set courtesy of Rob N7ATM. Any assistance would be greatly appreciated.

Thanks for your reply.

The post was a copy of an email sent to various WIARC club members, as such the general location needed not be specified, however this will be corrected in future postings

As for the date, there were no hamfests scheduled during that weekend when WIARC picked its date. It was only later that we were informed that the Hosstraders were having their hamfest in NH that same weekend. Nevertheless it is fairly distant from the Montreal area and takes place during 2 days so we hope this will not greatly affect the number of hams coming to our hamfest.

We're glad you are enjoying the return of the auction to the WIARC fleamarket, and hope that if this auction is successful and gains enough support that it will remain a part of fleamarkets for years to come.

WIARC

Michael Crestohl wrote:

> Hello:
>
> You might want to mention that the WIARC auction is in the Montreal Quebec area otherwise people won't know if it's close to them. Also your choice of the date was poor - its the same day as the Hosstraders in Rochester NH which draws many of the more serious flea market players from Quebec.
>
> Anyways, glad to see that the auction is back. For years I never missed one of the West Island club's auctions and many of the fine items in my shack were obtained there.

The Professional Partnership Program is a site-license providing an unprecedented level of electronic simulation and synthesis capability at virtually no cost per user. For a one-time investment of $975, the Program provides to every engineer and designer company-wide:

- Nodal Circuit Analysis with True Two-Node Port Definition
  - Unconstrained Noise Analysis
- Transmission Structure Synthesis & Analysis
  - Over 40 Single & Coupled Topologies
    - Strip (Planar) Structures
    - Wire Lines
    - Coaxial Arrangements
    - Waveguide (Non-TEM) Topologies
- Passive Filter Synthesis
  - Lowpass
  - Highpass
  - Bandpass
    - Prototypes
    - Practical Reactively-Coupled Realizations
- System & Receiver Design Support
  - Link, Terminal & Radar Analysis
  - System Architecture Characterization
  - Spurious Analysis
    - Transmit & Receive
    - Coincident & Tuned

```
   Preselector & Output Filtering
 Phase Noise Analysis
  Time Domain Effects
  Frequency Domain Effects
```

600+ Page User's Manual with Examples & References

Join the Program and you will be furnishing all of this invaluable capability to every designer, not just one! Our competitors are furious with us for having created the uniquely progressive opportunity. It seems they're still using dongles to hinder access to their own products.

Please contact me for additional information. Or, see:

Chuck,
If you are on a budget, you might pick up a Radio Shack HTX-202, which is a 2 meter handie talkie. There is one listed in alt.ham-radio.packet (and the price is good, too!). I use one for my base station, using 13.8 volts from my HF power supply, along with the Radio Shack amplifier, and a homebrew 3 element beam at 18 feet. With this setup, I get 48 watts output power into the beam (1.1:1 SWR). I am able to use repeaters anywhere, anytime, within a 60 - 70 mile radius.

BTW, I bought my HTX-202 in October 1997, used, from the Internet, for $200. The package was:
HTX-202 with rubber duckie antenna
Amplifier
2 speaker mikes
1 rechargable battery pack
2 battery packs for AA dry cells
cigarette lighter adapter power cord
original boxes, manuals, and transfer of remaining Radio Shack warranty

--KD5CAS

There is a Service Bulletin that states radios below SN 804xxxx may not
work with a computer interface without changing the eprom.

Hi all. I'm totally new to HAM radio having just passed the Tech theory exam last weekend. Now if I can get my kids (ages 7 & 12) through it we can try for Tech-Plus! My dad was a General for many years - he would be proud.

Anyway, I'm looking into VHF/UHF H-T units and I'm sorry to say that I just don't fully understand what I need. I sure would appreciate any feedback on the following questions:

1. What is CTCSS? Some units have CTCSS encode, others encode/decode, others encode/decode/scan. What's needed?

2. Do I want to be looking for a "dual" band H-T? If not a dual, then 2m or 70cm? I live in Dallas so I guess I should check to see what repeaters are around here.

3. What is DTMF paging and/or DTMF squelch? Are these things I need?

Finally, I would be interested in any suggestions as to an H-T model/manufacturer that would be appropriate for a newcommer - something that doesn't cost an arm & a leg.

Appreciate any and all help.

Dean Wooldridge <meds@onramp.net>

First,

Find a ham club in your area ! :)..

This will accomplish several things... you'll be able to talk face to face with other hams about what they are using and why they like them... you'll find out if there are any 440Mhz repeaters in the area and how busy they are... single band HT's are cheaper... so if not a lot of 440 activity.. why spend the money for dual band.

They can also give you detailed answers to the rest of your questions... You'll definately want CTSSS as many repeaters require a sub-audible tone in order to be used (thats what CTSSS really is)..

Anyway... find a local club... that'd be the first place to start...

Good job on passing the test. Welcome to Ham Radio.
> 1. What is CTCSS? Some units have CTCSS encode, others encode/decode,
> Hi all. I'm totally new to HAM radio having just passed the Tech theory
> others encode/decode/scan. What's needed?
Contunuous Tone Coded Squelch System. It's a PL tone that wakes you up if a
buddy calls. This would be used if your on a freq that is busy and you only
want to be hear a freind that calls. Some repeaters won't transmit the PL
out of the repeater. I don't think you really NEED it, but it's nice.

> 2. Do I want to be looking for a "dual" band H-T? If not a dual, then
2m
> or 70cm? I live in Dallas so I guess I should check to see what
repeaters
> are around here.
In most areas 2m is very popular. You really want to have 2m, you can
always use it no matter where you go. 440 is less crowded, and in some
parts of the country all the repeaters are closed or private, like Southern

Cal. Dual band would be your best bet, if you can fork out the cash. I have a Yaesu FT-50R that I really like, there are all kinds of dual bands out there.

> 3. What is DTMF paging and/or DTMF squelch? Are these things I need?
Dual Tone Mutli Frequency tones made from your touch tone pad,
DTSS Dual Tone Squelch Systemit's a function that decodes the audio sounds of the DTMF and then opens the squelch on your radio. Similar to CTCSS.

> Finally, I would be interested in any suggestions as to an H-T
> model/manufacturer that would be appropriate for a newcommer - something
> that doesn't cost an arm & a leg.
The FT-50R I mentioned earlier is about +$300. You can get a Radio Shack HTX202 for about $200, or cheaper used, maybe $100. Go search the web for some good models and prices. Good luck and 7 3

Good idea George,
I used a dual band Larson mobile whip for several years on a 40' houseboat with no problems. It was even hooked to a low power 440 repeater for 2 summers. (Hey as long as I was in dock I had access to the phone patch!)
Mike, that aluminum top would make a great ground plane on these frequencies!

Well I wonder if our American friends think we are dumb.  Well I was
surprised that when I decided to send out a followup usenet message, I
was asked if I want to send it to all 9, yes all 9 usenet groups that
the original message was sent to..

You'd think that these people would work out that USENET has groups to
place relative information and you don't have to SPAM 18,000 groups to
get a message across.

If I wanted a flaming RADIO FROM THE US, I would check out the REC
radio newsgroups.  YANKS, don't treat the world like idiots because we
can search usenet ourselves and we do appreciate that you just don't
want us to miss such an incredible offer !

Hello and welcome!
Congrats on the ticket. I hope you will have many years of enjoyment with the hobby as I have.

If I may suggest one thing.......in one word.....LISTEN.
There are many areas of amateur radio to become involved in. You need to decide what interests you, VHF, HF DXing, ragchewing, SSTV, ATV, and on and on. There is often the desire to get on and talk right away, and that is understandable, but take some time to listen first. Learn the proper operating techniques first, the proper frequencies where the various modes are used, and the established protocols in your area. Get your self an inexpensive scanner or receiver, or an older rig that you can use to 'tune around' with, and become familiar with the bands. Then, as posted before, get involved with your local club, attach yourself to a respected ham in the club, and LISTEN some more.......it will greatly increase you initial enjoyment!

Hello all,
I would like to be able to operate my rig during an electrical storm without worrying about lightning strikes if that is possible. Right now I have a copper ground rod outside driven in the ground and the wire wrapped around the PL-259 on the radio and also on the radio itself (on one of the screws). Also, I have the radio itself plugged into an APC surge supressor, which I know will protect it from surges originating in the power line, (one of them has saved my computer twice now, heh) I am just concerned with strikes to the antenna itself.

Jeff

Please reply via email, I don't get to check the newsgroups much anymore.

The only way to protect yourself is don't be anywhere near the radio or antenna connections during a lightning storm! You can do lots of things to minimize damage from surges caused by nearby strikes but if you get a direct hit on your antenna and you are hanging on to the mike, your odds are not good.

I desperately need some info (schematic layout, manufacturer) about a Ham Radio 2m VHF linear amp: Brand=Bias Electronics (urbania, Italy), Model=VHF 160

It's a black metal box with cooling frame on top, One switch (middle position off, down=SSB, up=FM) on front right, and two red LED's on the left ("on" and "tx"). There a double side PCB inside that looks a bit "home-brew" (maybe it's a KIT???).

The amp is based on a MRF 245 that should be able to do 250 watts (absolute max). 160 watts (see model) will probably what it's supposed to give me. It's doing now only 50 watts and switching (the relais) and vox is not working properly. While it looks quite simple on the inside, I'd like to give it a go and let the thing do it's normal job (QRO!).

For Dutch HAM's: Ik heb 'm gekocht van PA3FRD (Friesland?) uit nalatenschap

van PA3EQU (silent key) op de markt in Meppel 1997. Misschien is daar nog
wat info te vinden?

CAN ANYONE HELP PSE? PSE EMAIL TO: PE1RVK@VRZA.ORG

Tnx very much de PE1RVK (JO21WT)

> KU4OJ

A vertical is an excellent choice for 80 meter DX but isn't all that great for short-haul work, such as a state-wide net. They can be built for relatively low cost and don't take up a great deal of acreage.

A good ground screen is essential for high transmitting efficiency, especially for a loaded (shorter than 1/4 wave) vertical. As a rule of thumb, you should put twice as much "sweat equity" into your ground system as the antenna itself.

I recommend avoiding commercially manufactured verticals due to their high price and "do all bands" design philosophy. There are a number of dealers (among them, Texas Towers) will sell aluminum tubing in variety of sizes. From one of these dealers, you could purchase enough tubing to make a full-size (1/4 wave) vertical at a lower cost than a short commercially made antenna. Tubing is available in sizes such that the OD of one size is slightly smaller than the ID of the next bigger size, which allows a telescoping or collapsible design.

If you decide to use a shortened antenna, place the loading coil about 1/3 of the way from the top, and use a capacitive hat. Also, solder all of the radial wires together, as it is desirable to maintain high conductance near the base and use aluminum anti-corrosion grease on all mechanical connections.

Good luck and good DX,

jEFF

This shouldn't be a problem. QST published an article on a series
of tests done on amateur equipment in the Navy's EMP simulator.
Battery powered VHF equipment suffered no damage when used
with a rubber duck. A big indoor antenna might pick up enough induced
surge to present a problem, but an indoor quarterwave GP should be
Ok.

HF equipment, even with indoor antennas, is another story. There
can easily be enough inductive coupling to cause front end damage.

I don't think this is a good idea. The purpose of a ground window is to equalize potentials on all cabling entering or leaving the protected area. Unless you can be sure that you don't get parasitic coupling between the ground window plate and the ferrous plate, and unless you can be sure the impedances are matched so that potential balance is maintained, I think you might be creating more problems than you solve by doing this.

>Would it be helpful to put on a couple of torroids on all

That's probably not helpful.

Yes it does. Using ground buss technique is a bad idea for strike protection. Tie all cabling entering or leaving the protectied area *directly* to the ground window in as symmetric an arrangement as you can. This includes power and telco.

>I dug up the old articles in QST regarding EMP from the 80's and it
>seemed to me
>that the radios they tested were surprisingly resiliant to EMP given

>new information regarding such events?

And the simulator they used was producing NEMP (Nuclear Electromagnetic Pulse) waveforms. That's much tougher than dealing with lightning EMP because the risetime of the pulse is much faster. But realize they were testing induced surge, not a direct strike. The latter is a horse of a different color.

VHF/UHF equipment is fairly robust against EMP. (That's due to the low impedance filter structures in the front end of typical VHF/UHF equipment, and the small effective aperture of typical VHF/UHF antennas.)

HF equipment isn't as robust against this, with tube equipment generally being more susceptable to damage than solid state equipment. (This may seem surprising, but it is because of the generally higher input impedances in the front end of tube equipment. Input coils often arc over, grid leak resistors fry, etc. Solid state normally has a bandpass filter structure in the front end which effectively limits the amount of surge energy entering the receiver, and for transceivers, the PIN diode switches will generally clip the remaining pulse to a level tolerable by active components.)

Now I don't mean to imply that you should neglect to use proper surge suppression and station layout because of these factors. The design factors of solid state help, but they don't offer anywhere near perfect protection. You still need to do the other things to control surge (and to survive direct strikes).

I have no problem tieing all cables entering and leaving the shack to the single window. The problem I have -- and where using a ground buss is very attractive -- is for the myriad of grounds from all of the equipment in the shack. It is very easy to have 20, 30 or more individual pieces of primary and accessory equipment that need to be grounded. To provide each with an individual ground run would create a wiring nightmare and in many cases inductive ground run lengths of 20, 30 or more feet.

At what point can a low-inductance ground buss to a central point become effective? In theory, if you made your central ground window large enough to cover an entire wall, you could attach grounds to any point on that wall. As you reduce the height of the wall, you approach a buss configuration. When/why does this stop being effective? At what point does the buss stop being an extension of the window and start becoming a conductor to it? Why is a 20 foot length of 6 gauge wire direct to a ground window better than a 4 foot length connected to a 16 foot length of 1" copper pipe running to the ground window?

Is the problem because the inductance between the different attachment points on the buss will create voltage differentials between the attached equipment? If that is the case, wouldn't the same effect result from different lengths of direct ground runs?

I'm just trying to find a practical approach (not necessarily an easy one)
to solving a complicated problem.

Frank Finger, NU1A, had written an article about lightning how's and why's of strikes.

Have you ever seen the lightning rods on the top of the older type (mostly victorians and barns) buildings? Well, those don't attract lightning, they dissipate the charge before it can build up. See, lightning doesn't start in the clouds, it meets a 'feeder' from the ground. if there is no feeder, there is no strike.

That is explained by the quote from his article;

"While reexamining one of my old physics books, I came across a formula for the discharge from a sphere. My attention was attracted to the following sentences. "It has been previously shown that the maximum charge that can be retained by a conductor in air is limited by the fact that the air itself becomes conducting at an electric intensity of about 3 x 10>6 volts per meter. Vm=a*Em. Em is the maximum voltage; and, a is the radius of the sphere. For a sphere one centimeter in radius, Em=30,000 volts, and no amount of "charging" can raise the potential of a sphere this size, in air, higher than 30,000 volts."

And we all know that lightning carries a much greater voltage than 30,000.

Thus, if you were to install an inverted spear that is well grounded above your installation, there will be no strike in about a 50ft radius.
I will have the entire article and other lightning information posted on my page as soon as I get time to finish it.

Hello Florida!! Gone for a week and 1/2!! Staying with my elmer KA1UGH near Tampa. If anyone is in the central Florida area, please email and we can try to sked a QSO down there!!

The new Blue channel is 39.14, not using 42.34 anymore. This is accurate for San Diego, SouthWest Riverside Countys, CA. I believe Orange county also but not certain.

Hello everyone,

Thanks for all the great replies to the storm operation question, they were all helpful. Anyway, I currently hold a tech license and plan to upgrade to General (probably going to skip tech+).. The theory will be no problem.. I have never had any problems with learning written things, however, CW is a challenge. What are some suggestions for methods to learn CW? And what is the best Morse Code computer program? I followed a link about the Koch method...does that actually work better than traditional 'speed build' style? Any help on learning this seemingly challenging skill would be much appreciated.. Oh yeah, I have been unable to read rec.radio.amateur (not sure about posting), so my apologies for sending this to rec.radio.amateur.antenna, as it doenst really belong here, but anyway.. If this post goes to rec.radio.amateur, just reply by the return email address.

Jeff

Ok, this is kinda stupid, but.....   Have a friend with dual band radio, remote head. Not sure, but think it's an Alinco (about 8 yrs old) if not, it's kenwood, either way, this should be a generic question. Concerning the 'new' push and hold for what I suppose is relayed power on/off like most newer radios are, what would make this radio refuse to turn off?? It had to be wired thru ignition switch so it will turn off and on with the vehicle. Radio works perfectly, but it just won't turn off! Ohm meter says the switch itself on the control head is fine. any ideas??
thanks,
Randy

>When designing a ground window and single point ground, does it

I am rather new to this. What is a ground window. I know that the books say to use a copper pipe that is grounded to attach your equipment to. Is this the ground window? Also another guy posts that doing the pipe thing is not good. He says to use one ground point??? what gives.

thanks

Jeff OM,

CW comes easily to some, and less easily to others. Anyone can learn
it, to a certain degree. However, not everyone seems to be able to

reach the level at which it is enjoyable and easy to use. It will never be enjoyable and relaxing until it becomes second nature, as just another language. If you can get to that point, you will marvel at how well-suited it is to general ragchewing as well as weak-signal sleuthing.

Here is what I found:

Learn the characters by SOUND, never associate them with printed, visual, dots and dashes. Sound out the words and letters to yourself, aloud if you can, while you are driving to work, for example. License plates, signs, anything, turn them into the appropropriate di, dit, dar or dah combinations. Learn to think in Morse. Remember to place a conscious accent, or emphasis, on the dahs. Example: the letter 'R' is diDARdit, NOT ditdahdit. 'A' is diDAH, not ditdah. Get the picture? This was emphasized very well in the ARRL booklet "Learning the Radiotelegraph Code", which I used in 1955.

Copy as much off the air as possible. You want to get used to common conversational use of CW. Copying using computers and tapes gets BORING real fast. That is not what you want. Why make it so tedious? You want to be INTERESTED in what is being sent, and curious as to what is coming next. That requires copying from a real human sender on the other end most of the time. W1AW code practice is of some help, since they send common-language practice out of QST usually. But you want to copy real ham radio ragchewing too, because it contains all the usual shortcuts and Q signals that we all use. Try to not write anything down. You want to get comfortable with copying in your head, because only then will you be able to eventually sit back and just listen to the other feller say what he has to say, which is the proficient level of CW operating.

When I first learned CW, (using a buzzer and straight key because I had no receiver), and then I got a receiver and started listening, I wrote everything I heard down, letter by letter, for a few days. Then, it dawned on me that the writing was a completely unnecessary, and tedious, step. I found that I was internalizing what the other ops were saying, while I was doing all this writing! So, why write it down, except for log info or notes? In the end, HOW you get the information is completely irrelevant (ie, it does not matter later, that it came via CW, or whether you heard them speaking directly, or if you read it somewhere). In other words, the MEANS of the communications becomes transparent, and it is only the information transfer itself that has significance.

That is the situation when you are proficient at CW, and it is an effortless joy to use it. That is why, incidentally, CW is going to be around for a long time in ham radio. It has nothing whatever to do with its relative 'efficiency' or 'throughput' or 'modernity' or any of several other irrelevant concepts that have no relation to the enjoyment of a skill, and a mutual bond with other operators of similar inclination and competence.

I hope this somewhat long-winded (I am a ragchewer, after all!), description is of some help to you. It would have been helpful to me when I first started out.

GL and 73,

Don, W6JL

  Hey asshole! This isn't china! Besides I would never work for a
company that restricts my 1st ammendment rights. You being a LEFTY
might not feel that way.
>While you and your friends may talk this way, let me assure you that
>such abusive foulmouthed language is NOT "accepted" by the general
>public.
          Where are you from RED CHINA?  I only speak that way when I
am dealing with scum like you. Go spread your disease somewhere else.
>Maybe the Feds should put warning stickers on CBs saying "Adult language
>and childish attitudes may be encountered. CB is for adults only."
                 Just like anywhere else in life. They might talk to
you. We wouldn't want you corrupting the minds of our children by
telling them they have no right to free speach!
>Ron Miller
>(and yes, I know all those words. What former sailor doesn't?)
            Former? Faggot got kicked out huh? Shit ! You had better
throw your bible away fairy. YOU are living in SIN!!!!

A person needs to have four tones. A person with Dyslexic with less than 3
tones will NEVER learn!

I don't need to worry about Dyslexic now Now I have fluent aphasia.  This is
the reason I can't read or write.  What is your problem?

Don Huff wrote:

```

> reach the level at which it is enjoyable and easy to use. It will never be enjoyable and relaxing until it becomes second nature, as just another language. If you can get to that point, you will marvel at how well-suited it is to general ragchewing as well as weak-signal sleuthing.
>
> Here is what I found:
>
> Learn the characters by SOUND, never associate them with printed, visual, dots and dashes. Sound out the words and letters to yourself, aloud if you can, while you are driving to work, for example. License plates, signs, anything, turn them into the appropropriate di, dit, dar or dah combinations. Learn to think in Morse. Remember to place a conscious accent, or emphasis, on the dahs. Example: the letter 'R' is diDARdit, NOT ditdahdit. 'A' is diDAH, not ditdah. Get the picture? This was emphasized very well in the ARRL booklet "Learning the Radiotelegraph Code", which I used in 1955.
>
> Copy as much off the air as possible. You want to get used to common conversational use of CW. Copying using computers and tapes gets BORING real fast. That is not what you want. Why make it so tedious? You want to be INTERESTED in what is being sent, and curious as to what is coming next. That requires copying from a real human sender on the other end most of the time. W1AW code practice is of some help, since they send common-language practice out of QST usually. But you want to copy real ham radio ragchewing too, because it contains all the usual shortcuts and Q signals that we all use. Try to not write anything down. You want to get comfortable with copying in your head, because only then will you be able to eventually sit back and just listen to the other feller say what he has to say, which is the proficient level of CW operating.
>
> When I first learned CW, (using a buzzer and straight key because I had no receiver), and then I got a receiver and started listening, I wrote everything I heard down, letter by letter, for a few days. Then, it dawned on me that the writing was a completely unnecessary, and tedious, step. I found that I was internalizing what the other ops were saying, while I was doing all this writing! So, why write it down, except for log info or notes? In the end, HOW you get the information is completely irrelevant (ie, it does not matter later, that it came via CW, or whether you heard them speaking directly, or if you read it somewhere). In other words, the MEANS of the communications becomes transparent, and it is only the information transfer itself that has significance.
>
> That is the situation when you are proficient at CW, and it is an effortless joy to use it. That is why, incidentally, CW is going to be around for a long time in ham radio. It has nothing whatever to do with its relative 'efficiency' or 'throughput' or 'modernity' or any of several other irrelevant concepts that have no relation to the enjoyment of a skill, and a mutual bond with other operators of similar inclination and competence.
>
> I hope this somewhat long-winded (I am a ragchewer, after all!), description is of some help to you. It would have been helpful to me when I first started out.

While I've know of people who've learned the code in a matter of a few weeks or months, most will take a lot longer. Maybe those who can learn it so quickly have both a good memory AND a good sense of beat or timing. There may be other factors, but each person learns at their own rate. If it takes you 6 to 10 months, to reach 13 WPM, accept the fact that it takes a while to learn. (I worked on learning the code for 8 months before I could pass the 13 WPM test.)

Some basic things (rules) are:

(1) PRACTICE, PRACTICE, PRACTICE: One never learns the piano without practice; how can anyone learn the code without practice? Many find that 3 20 minute sessions are better than 1 hour session. Thus, it may be better for you to break your daily practice into 2 or 3 sessions each day.

(2) EVERYONE IS DIFFERENT: Try may things, but use what seems to work for you.

(3) LITTLE BY LITTLE, ONE GOES FAR: We live in an instant world, where we all want it now and without any work. Sorry, but for most of us, code is a skill that takes time to learn. While working on learning the code, there were times where I seemed to be hitting a wall with NO progress. That wasn't too bad for a day or two, but when it reached a week and in one case 2 1/2 weeks, I almost gave up. I'm VERY thankful for my ham friends who helped encourage me through that time. If you hit a wall and don't seem to be making any progress, DON'T GIVE UP. It may take 1, 2, or even 3 weeks, but if you keep at it, you will break through the wall.

(4) SEAK OUT ENCOURAGEMENT: This will make it easier for you to keep at it and it becomes very important if you're starting to feel "burnt out".

(5) CODE TAPES ARE GOOD, COMPUTER CODE PROGRAMS ARE BETTER: Code tapes can be very helpful, but you can't "program" the tape for any special thing you need. Also, you need to have several sets of tapes to avoid remembering what's on the tape. Computer code programs can be set-up to your needs at the time. I found the MFJ Pocket Code Tutor to be VERY helpful. I could carry it everywhere and program it to whatever I needed at the time. The user defined character set was VERY helpful. I could start with what I know and add a new letter one at a time. In my case, too many new letters at once caused my brain to go blank. I found it a lot easier to work with what I knew and add one new letter at a time.

73,

Bob

I have found copying off of the air is a real pain. To find someone send slow enough to copy, for me, means the sender has a very poor wrist and is very sloppy. So much for the 'sound' of a character...:-)

Yes, there is such a list, but not on line.
The list is called A.L.R.S. (admirality list of
radio signals) part 1, volume 1+2.
It is on board on every proffesional ship.

r,misc,rec.radio.shortwave

I have forsale or trade the following.

DX375 shortwave radio. 50.00 plus shipping.
B&W Folded Dipole (new) 150.00 plus shipping. (Model BWD)

I am looking for Bird 43 elements particularly the 250 or 500 watt HF Slug.
(250H or 500H)
I purchased the antenna and put it up, my wife then decided I could get a tower....(I put it right outside the picture window <g>).

Patrick Wilson

YAESU Coax Cabls for HF Rigs

I am looking for a complete RF coax cable, the type which Yaesu uses for transferring RF between the PCBs in their HF rigs. The cable is coax about 5mm diameter and has 2 mini-coax plugs on it. The cable itself must be about 30cm in length.

According to the local Yaesu dealer, these are not standard spare parts. I can buy similar cable, but not the male plugs which are connected on the ends by some crimping process.

As I am sure that I am not the first to run into this problem I wiould like to hear from others what they do, or where they buy, such finished cables.

>Ron

This may well be a valid frequency for use in the above areas, but it's not called the Blue channel. The Blue channel remains 42.34.

>what gives.

A ground window is a metal plate (which may be an entrance bulkhead, or may just be a plate mounted near the ham station) to which *every* cable entering and leaving the station area is bonded. This includes all antenna feedlines, rotator control cables, *AC power*, Telco, etc. Wires that are nominally "ground" are bonded directly to the plate. Wires that are nominally "hot" are bonded to the plate through a proper suppressor. The bonds should be arranged symmetrically on the plate so that no current from any bond must flow across another bond in order to reach the central ground strap to the external ground field single point.

The purpose of a ground window is to equalize the potential between all cables entering or leaving the station area. No potential difference equals no damaging current flow through your equipment.

(The suppressors snub "hot" potentials to levels tolerable by the equipment connected to them.)

The ground window is also bonded to your external Earth terminal. That terminal should be your ground field *single point*. In other words, all external grounds should tie to it in star fashion. (The National Electrical Code requires all ground terminals to be bonded together.)

What you want to avoid is daisy chain or buss connections. Everything should be star connected. External to the station, everything star connects to your ground field single point. Internal to the station, everything star connects to the ground window. These two are tied together with a heavy low inductance strap.

It is absolutely essential that no wiring bypass this system. If even one wire bypasses the system, all of the protection it offers you is lost. The use of a ground window and a single point are central to good lightning protection. There are other steps you have to take too in order to be able to operate during a storm, but these two steps are essential.

Use of ground windowing and a single point is also helpful as a station RF ground, though *stations typically don't need RF grounds*. What sometimes does need an RF ground is certain types of antennas which need ground to act as a counterpoise for their operation. But they need that ground *at the antenna feedpoint*, not back at the station. That's a separate topic.

Try eventualy YAESU in UK or Holland. Irespective of the possible fact that these cables are not standard spareparts it should be possible to obtain them from there - especially if you by any chance have the part No. from the manual.

> (The suppressors snub "hot" potentials to levels tolerable by the equipment connected to them.)
>
> The ground window is also bonded to your external Earth terminal. That terminal should be your ground field *single point*. In other words, all external grounds should tie to it in star fashion. (The National Electrical Code requires all ground terminals to be bonded together.)
>
> What you want to avoid is daisy chain or buss connections. Everything should be star connected. External to the station, everything star connects to your ground field single point. Internal to the station, everything star connects to the ground window. These two are tied together with a heavy low inductance strap.

Gary (or anyone else for that matter),
could you explain the physics why the use of a ground buss is bad? My goal is a system that can withstand a lightning strike and reasonably hardened to EMP, (all within reasonable expense :) and to learn the engineering and physics principles behind it (no black magic). I have read GLEP, but it was several years ago.

I don't understand how a length of copper buss which runs behind the equipment to which the equipment is attached by short braid is worse than running seperate (long length (which could be very long in a room full of equipment) of) braid to the central ground connection.

```
computer   TNC   HF    UHF    phone patch   rotor    etc.
monitor     |     |
printer     |     |
  |         |     |     |         |           |        |
----------------------------------------------------------- ground buss
                           |                            (low inductance)
                       short strap to
                        ground window
```

how is that ^ worse than running a (higher inductance) strap to each piece of equipment?

along these lines...
when trying to design my station, there are some abvious physical problems with running seperate ground straps and connecting to the ground window. The biggest is that the ground window is on the exterior wall of my house. and it will be difficult (and ham radio will go down another notch or two with my wife) to punch another hole in the wall big enough to connect all the ground straps and allow access to change things around, plus problems with insulation, physical integrity, etc.

Would it also be acceptable to run a short strap (basically from one side of the wall to the other) from the ground window to which all the antenna surge protectors are bounded (external to the house) to another panel inside the house to which all the case grounds, telco, power, etc. is connected? This arrangement would make things a lot simpler (for me), (but effective is what I need. :)

Thanks!

Lamda power supplies for sale. Model LJS-11A. This is a 0-12 volt power supply rated at 11 amps. Input is 105-132 volts at 47-440 cycles. This is a INDUSTRIAL grade commercial power supply. Small size. $35 each. Plus UPS

Hi Karsten,

Problem is that the service manual has no part number for these cables. The
local dealer tells me a similar case a few years ago meant them having to
ship the cable to Yaesu and then wait weeks if not months for the reply.
Not a nice solution if your radio does not work without it. I know it
sounds crazy, but there are no part numbers for these cables.

I have used Omega Electronics for several of my AMP Supply products and have never experienced any problems. He is the un-disputed expert of AMP Supply products. I have used his services since 1990 and have been very satisfied. A craftsman, knowlegeable, and above all, very honest.

OK Robin,

As I see it there is only two solutions left, viz the cheap one and a little more costly one.

You can use RG 174 cable (surely obtainable from RS-Components in UK or RS-Radio-Parts in Denmark, whereever you are located) and then solder it directly either to the prevailing sockets or remove them and solder directly to the PCB. You can also with advatage use the silver-braided, teflon-insulated this coaxcable (appr. 3-4 mm�) normaly used in cellular phones.

The more expensive way will be to replace the existing socket with new standard coaxsockets (goldplated) and solderable connectors for the above mentioned cable types (eventually in one end of the cable only just to make it detatchable from one PCB to another).

I'm quite sure that for RF (not VHF or UHF) the cheapest solution will prove quite satisfactorily.

Regards

What in your miserable life could be worth the chance of getting fried
to operate during an electric storm..???? This is a hobby pal..and its
the last thing I would be doing during an electric storm unless Im on
my HT in a local Skywarn net... Its just not worth it..!!!!
Enjoy the hobby... the storm will go away fairly quick...

Those of us charged to maintain 24x7 commercial operations would be
surprised to hear that. It is possible to handle direct strikes to the antenna
without harm to personnel or equipment failure. (If it weren't, we'd be off
the air every time a thunderstorm came by.) It is not simple to do so,
however. Very careful attention to detail is required. This is where the
professionals earn their exorbitant consulting fees. :-)

I've written extensively about this subject on this group a number of times.
Consult Dejanews for the details. And order Polyphaser's book, "The
Grounds for Lightning and EMP Protection". It doesn't cover everything,
but it is the best generally readable reference for dealing with lightning
surge in radio installations.

Of course you are right. I was limiting my thinking to what the typical (whatever that is) ham might do for a home installation. I doubt that the little arc-plug devices connected with a peice of 16 guage wire will provide much protection :)

Your current setup is just *barely* adaquate to protect against static discharge. If you're really interested in operating during storms (or, for that matter, if you're interested in just protecting your equipment at all) you need to use an approprately grounded entrance panel, feedlines, etc. As for the surge supressor - if it is anything like the other APC supressors that I have seen, it does NOT protect against all transients, especially those in the lightning-strike class.

I'd suggest getting some literature from companies like Polyphasor, etc, who specialize in lightning protection. It won't be cheap, but if you really want to operate during a storm, it is possible.

What would the risk level be in operating from a battery with an indoor antenna? This would eliminate the problem with AC strikes, but would an indoor antenna be prone to being struck?
Jeff

Probably no more than the chances of any other metal object inside the house. Depending on the freq and power you probably want to consider the RF Safety issues though.

How about those who talk on a wired telephone during a storm, hanging on to the end of several miles of wire hung up in the air. That's putting a lot of faith in the phone companies lightning arrestors!

2 ele 3 band HF quad antenna.  Hy-Gain, all aluminum, everything
including
the boom-to-mast clamp.  I tossed out the crappy gamma maching network
and
opted for a remote relay DC switched feed.  I see some novice or tech
having
a real good time with this 'cause it'll probably need some fiddlin' and
diddlin'.  26' tip to tip - not for the faint of heart and probably not
for
field day but who knows.  Fun to play with.  All copperweld element
wires.  A real go-getter.  Take it home (I can't possibly ship this
without
a major hassle) for $50.  I live in southeastern NH, near Exeter NH.

Very true. You need a complete site plan that includes designed primary strike
paths, an excellent Earth terminal, and use of ground windowing technique to
avoid differential potentials across the protected area. Suppressors are part
of the site plan, and they have to be the proper suppressors, properly installed,
but they are only a part of the plan.

The key to good lightning protection is to understand that every detail counts.
You can't overlook *anything* in your site plan. If you do, you'll undo every bit
of protection you have installed. In other words, you can't go at this half-assed,
it is whole hog or nothing. It is quite possible that a *partial* lightning
mitigation
installation can lead to greater levels of damage than no mitigation measures
at all.

Everybody read that last paragraph again. This is vitally important to understand. There is no such thing as incremental protection against a strike. Half-assed protection can lead to greater harm than no protection at all. Do it right, or throw your coaxes out into the yard every time there's a cloud in the sky. (And even that won't help if the antennas are mounted to the house.)

```

You bet, more than is deserved in many cases. I've seen phone instruments totally blown apart by a strike. I'd hate to have been holding it at the time. But that's generally due to a lack of maintenance of the phone system protective measures. They really are quite good for preventing harm to personnel. They aren't good enough to prevent harm to solid state electronics in many cases, however, and you need to take your own steps to deal with that.

And woe be unto you if you interface the phone circuit with other systems with separate grounds. That's an invitation to disaster. You have to ground window everything to prevent problems caused by potential differentials derived from the strong earth currents involved during a strike.

It certainly wouldn't be prone to being struck, but it would still be prone to having substantial damage from spikes induced by a nearby strike. You still need to take proper precautions.

One example I had to deal with 1st hand was about 15 years ago. The
company I worked for ran a 50m long conduit between 2 buildings with a
900-pair cable inside for both voice and data. The conduit took a
direct strike on a short section between where it exited one building
and went underground.

We had flames coming out of the data switches and modem banks in machine
rooms in _both_ buildings. All the PBXs for phone service and outside
trunks were also fried. I spoke to some people who were on the phone at
the time and some had ringing in their ears for some minutes afterwards
because of the surge thru their handsets. No one was hurt except for a
poor guy working under a trailer right next to the conduit -- he wet
himself.

Knowing the team responsible for wiring up the complex, I doubt there
was any significant attention paid to lightning protection. At least
the modems acted as fuses and protected the computers.

When designing a ground window and single point ground, does it
help to pass the coax, telephone, power, etc. wires through a second
panel with ferrous content or torroids AFTER the surge units on
the ground window? The purpose of this would be to help strip off
the magnetic energy or provide some type of low freq. RF choke.

Would it be helpful to put on a couple of torroids on all
interconnecting
cables with the idea of providing some minimum level of common mode low
freq. filtering?

I was able to find some heavy guage copper flashing 20in wide (for
$6.25/ft. it took me forever to find it) and plan to use it to make a
ground window/bulkhead for
all the antenna coax, etc. I want to place this panel on
the outside of my house and then feed the wires through the wall.
my ground bus inside the shack is a 3/4 in copper pipe running along
the back of the table. Is it a problem when creating a single point
ground that the radios, computer, power protector(like isobar), tel.
etc. are connected at different points
along the pipe and then that the pipe is connected to the ground
panel outside (with at least one bend along the way)? Does that violate
the SINGLE point system since the connections are inherently placed in a
row?

I dug up the old articles in QST regarding EMP from the 80's and it
seemed to me
that the radios they tested were surprisingly resiliant to EMP given
moderate protection. Is that still the prevailing wisdom or is there
new information regarding such events?

Hi all and thanks for reading,

Any body know where I can find a CW practice program that plays the sounds as I type into a file, or onto the screen? This seems like a good way to get it into the language center of my brain.

Thanks,

73

hello
I'm curious if you know the latest speed enforcement freqs that CHP currently uses. I use to find them on 42.340 (blue ch.-simplex). I don't hear much air-ground traffic anymore. Please advise. Thank you.
garret

Does anyone know the new aero CHP frequencies (Air to Ground?) Used to be on 42.340 MHz channel blue. Is CHP using new frequency? If so please send it to me.

Thanks,

CHP is currently using the following frequencies for aircraft enforcement:

45.02	Simlex	Air to Ground (Bay Area)
42.60	Simlex	Air to Ground (Bay Area)
122.85	AM	Air to Air (State Wide)

They also use the Blue Channel (42.34 - 42.18) to coordinate with ground units on the Base Frequency 42.34.

Hope this helps

Bob

Hey.. HAM-SURFER.. you're surfing and got no place to go?..

Check the pages of Dutch Radio Amateur PE1RVK. Lot's of nice info, some pictures, some questions (HELP!) and FREE Ham-Ads (for Europe). Just starting the site but I'm very curious about your feedback. Just a nice site to browse around.

http://home.worldonline.nl/~pvermeul
OR
http://huizen.dds.nl/~pe1rvk

The pages are identical at both addresses, sometimes one's faster than the other, check it out. By the way, there are NO FRAMES, NO JAVA APPLETS, NO MOVIES, NO SOUNDS !! Just colorful text and some lo-size pictures, you can see it with *ANY* browser and it doesn't take ages to load!

Planning: for-idiots-like-myself-PE1RVK-pages (simple technical projects), simple PCB layouts (help me Wim "EIK"!), FAQ.

Goal: want to become an interactive meetingpoint for Europe. ANY meaningfull

info YOU want to be published on the site will be there.. so drop me a line
at PE1RVK@VRZA.ORG

Hams...

After a long absence from HF I have fired up the HW-101 (I said LONG absence 8^)) and the thing cracked and zapped and spit at me. But I fixed it with some black vinyl tape. (ain't tubes wonderful?)

Having the rig operational again I am thinking of putting up a 80-10 meter vertical.

What's out there, what works, what would you do over again if you had the chance?

Discussion, please.

For Sale.....

Radio Shack HTX-212 2M FM Mobile.

Has a problem!!!  No Transmit Power Output.

I can hear the "low level" transmit signal in my

scanner or my HT, so it is on frequency ok,

and modulation is ok, But no Power output on the

antenna jack at all. (selling as-is).

Receives fine, excellent sensitivity etc....I have the

DTMF microphone for it, original manual and box.

$75.00  plus $5. to ship it usa/48

As you probably already know, a vertical (short) is a severe compromise on 80
especially. Id recommend saving ur money and just hang a wire for that band.
As for the others I hightly recommend GAP verticals. Good mechanically and
an excellent performer.

O
Tom  (The little narc who got beat up an awfull lot in highschool)
   Spewed out of his rotten mouth
>   Wow, I'm shocked that this kind of reply happens in this group. NOT.
                      Why you probably get treated like that wherever
you go.

>Yes you DO have to stand for us being here, it's a public forum, no license
>required.
                     HA ha ha ha ha ha ha license! Ha ha ha ha ha ha
ha ha! You probably fondle your crummy license every day before you
rape your daughter you sick fool. You have the nerve to feel special
about a stupid piece of paper. I hope you are still alive when your
FCC buddies sell off your precious ham bands. Maybe I'll buy a portion
for myself.

>It's real simple, stay on the frequencies you belong on and there
```

>will be no problems.

What frequencies do I belong on Hitler? To regulate the airwaves is to censor me! I will not be censored! Ist ammendment until I die motherfucker! You are in the wrong buddy. The old laws written by the bureaucrats will be repealed,and I will be there laughing at all of you dumb Hams.

> Now isn't that easy?!

Come try and censor me and you will find out how hard it is!

>Tom
>

I think I will start spamming the ham groups from now on with my veiws. You come here and rant and rave well then I guess I will go there and raise hell!

Hi there. I'm an electronic musician looking for old SYNTHESIZERS, KEYBOARDS, drum machines, analog sequencers, vocoders, strange old effects and related electronic musical equipment.

Basically, I'm looking for working or non-working instruments made in the late 60's, 70's and early to mid 80's. Machines with KNOBS, SLIDERS and especially ~PATCHCABLES~:
The more unusual, the better.

_Moog
_ARP
_Roland
_Buchla

```
_Serge
_Korg
_EML (electrocomp)
_Polyfusion
_EMS (synthi and vcs-3 putney)
_RSF
_Oberheim
_Sequential
_Steiner Parker
_Aries
_Synton
_E-mu
_Electro-Harmonix
_Ionic
_OSCar monosynth
_Roland    _TB-303 Computer-Controlled *Bassline
_Roland    _TR-909 Drum_Machine
_Roland    _TR-808  "                         "
_Pearl Syncussion SY-1
_ARP       _sequencer
_EML-400 _Electrocomp _sequencer
_Korg _SQ-10 _analog _sequencer
_Simmons SDS5, 6, 7 Drum Brains
```

If you have any of the above or similar equipment which you'd like to sell, or know where i could find some, please email me at rolandman1@aol.com If you'd like to, please include your telephone number since my email has occasionally been unreliable in the past.

Thank you very much for your time and I apologize if this posting annoys anybody.

Boy, all you have to do to see just how inteligent you are is look at all the fowl language you spew. Does this make you feel like a big man, or do the big ugly words make you have gone further than the third grade. Grow up man, then maybe you will be able to speak as a man, instead of a little boy, and most of them speak with better language than that.

New web site is now up and running. List your used scanners here for
the most exposure.

Because this is a new site the first 15 posts will be free of charge.
Regular charge is $5 for 4 weeks.

Why post on this web site? Your ad will be viewed by more people and
be available to all all day long for 4 weeks. Plus the site is for
used scanners, so people looking can compare pricMike
mawood@net-link.net

Try the site, it just might work for you.

Matt K, many CBers us Kenwood TS-950SDX or other amateur band radios.
They appear to stay on their turf for the most part, even tho their
radios will actually perform better on the ham bands.
On the other hand, many of the HF trouble makers sport CW enabled ham
calls.
Go figure.
Brian/N0iMD

You may wish to pick up a copy of "Solid State Design for the Radio Amateur" by the HQ staff of the ARRL. This book, though 25 years old now, has some excellent design philosophy in the "Advanced Receiver Concepts" chapter, as well as some fullblown receiver plans toward the end. Most of them can be inexpensively constructed while yielding high performance.

Assuming that "best" means performance (not power consumption
or parts count), KK7B's R1, R2 and miniR2 are very hard to
beat. Kanga US has kits, or you can roll your own. The original
articles were in QST, reprinted in the ARRL Handbook and in
QRP Power.

That was probably the actual problem with the club that I was in. They were pretty lean on talk of HAM Radio. It felt like a pure social gathering, which I wasn't interested in. One of the big issues that they made a big deal about was that they needed more members to show up at the Breakfast Meetings in order to get a group rate on the food. I try not to be bitter, but that just gets me mad.

> Of course, I'd like you to learn CW as there's a big, big
> world out there, but it's up to you as you've said.

That's my only problem with the issue of CW. It seems to be expected that each and every HAM learn CW whether they will use it or not. What about Packet, RTTY, ATV, Remote Control, etc.

Thank you for your response. It was constructive and positive. I have been out of touch with other HAMs for a while, but still listen and even talk to people on the radio once in a while when I think I can contribute something of value. Hopefully I can get back into the swing of things soon.

Do a search for falconry and animal tracking equip. I know they are listed in the "Thomas Registry" at most local libraries.

Maybe someone can help me with this.. I have this idea to get a BNC-PL259 coupler and put an external antenna on my HT (Radio Shack HTX-202).. Im going to build one if at all possible.. Does anyone have a simple design for a 2m antenna (one that will mount indoors would be good, although Ill probably put one outside.) Just something that will work better than a rubber-duck antenna..

FOR SALE: Yaesu FT-50R Dual Band Handheld (Fully modified)

$225 obo (see what's included free below)

This radio has had the Ultraband mod performed allowing for amazing Rx and Tx ranges, the best of any Yaesu modification.
Visit http://www.yaesu.com/ft50.gif for a picture of this radio.

Features:
-Fully modified!!!
-Great condition, rarely used

-Wide Multi-band Receive for the scanning enthusiasts 76-520, 540-999 MHz
(including Cellular)
-3-Selectable Rx modes (AM, FM-Narrow, FM-Standard)
 -Rugged MIL-STD 810 Rated for Shock and Vibration
 -Auto Range Transpond SystemTM (ARTS) uses DCS to automatically poll other
stations, indicating if they are within simplex range
 -Digital Coded Squelch (DCS) is used in the commercial industry, DCS
provides 113 unique codes in addition to the standard CTCSS tones
 -112 Memory Channels each stores offset, CTCSS/DCS & power level
 -Alpha-Numeric Display up to 4 characters may be used to name each memory
channel
 -Digital DC Voltage Display monitors current battery voltage
 -Full 5 Watts of Power Output with 4 selectable power levels
 -Automatic Tone Search (ATS) scans for DCS and CTCSS tones
 -Receive and Transmit Battery Savers built-in
 -ADMS-1C� Windows� PC Programmable (see below)
 -Keyboard and Menu Programming allows for simple FT-50R operation

Included FREE:
-AC Adaptor
-Screen and keypad protector case
-All original documentation, labels, and box (including warrenty)

Also for Sale for use with radio:
-ADMS Software Package (includes cable and software) ($100 obo)
I would suggest this addition to your radio. It allows for the greatest
flexibility.

Greets Jeff,

If you have your heart set on a do-it-yourself antenna then I would suggest you visit your local library and see what they have in the way of books on the subject. ARRL also has books and information can be gleened from the local ham club.

You can get a cheap antenna thru MFJ for about 15 to 40 dollars.

Chuck, piece of advice....

Leave the N/G out of your commercial interests. people don't want to waste the bandwidth it takes to download your commercials. Most of the stuff that has to do with a commercial venture on this N/G has to do with someone asking "Have you dealt with so and so", or "How was your dealings with this person". Not "Hey I am in the CB business.... Come and see". If your prices are good, then people will flock.

Good idea. Everybody has done exactly what you are suggesting at one time or another (or still using an external antenna on a handheld, like I am presently doing)   . A real simple homebrew antenna would be the 1/4 wave ground plan antenna featured in the ARRL handbook or the " Now Your Talking" study manual. Real simple antenna to build.   Of course, the J-pole antenna would be another fairly simple antenna to homebrew. I believe the J-pole is also featured in both books mentioned above. If you do not have a copy of " Now Your Talking" please purchase one cause you will always go back to it for reference.

I am currently using a 1/4 wave ground plane in the attic with my IC-2GXAT. I also got a J-Pole but it's sitting in the garage right now as there is about 4 feet of snow on the roof and I don't intend to install it until summer arrives. If you want to understand more about J-Poles here are 2 sites that I recommend:

The first one is fairly technical but if you want to know the ins and outs of a J, this is the place for you
http://qrp.cc.nd.edu/qrp-l/hints/jpole/JPOLE.HTML

The second one is where I found the plan for my J-Pole. Actually it is a stacked-J. And if you need help, don't hesitate t. He is a gentleman.
http://archimedes.galilei.com/raiar

Finally, you might want to try a quick search with Yahoo or your favarite search engine
http://av.yahoo.com/bin/query?p=J-pole&hc=0&hs=0

Using my 1/4 wave, I can actually reach VE2TA, a repeater that is 160 km (100 miles) away from my home. At 2.5 watts, I must admit that there is a background noise but when I turn my power supply on, my HT delivers a "hefty" 7 watts and I get pretty good comments fromthe folks I talk to on this repeater. So you see you can get pretty good results with these antennas.

73 and stay safe !

Thank you for reading this.

I am looking for suppliers of lightweight CW straight keys. I travel alot and am going to bring an HF 40 M with me. I really like straight keys, but the standards (vibroplex etc) weigh a ton (actually about 4 lbs--more than the radio).

The key I need could be quickly assembled without use of a drill press, band saw -because I dont have a workshop outside of a drill and soldering equipment.

Any help appreciated.

Define the WORD spam for me.

Spam is the advertising of anything that is NOT related to the subject of the Newsgroup, I posted my ad in the all the newsgroups related to what I carry, which is NOT SPAM but advertising in related newsgroups. so, go read your newsgroup articles and come talk to me what I'm doing is no defferent when what Gene is doing or lou franklin is doing or anyone else, it's just that fact that you have a hard on for me. and I basically am getting sick of it, and I am going to be forwarding a copy your message to your ISP along with this reply to your isp... and see who's doing what to whom.

have a nice day, asshole

>isp... and see who's doing what to whom.

Well let's see...whoever posted right before you asked a simple question. I
doubt their ISP would give a hoot about it.

>have a nice day, asshole

On the other hand, YOUR ISP might have a little more to say about directing
obscenities towards other people. Go ahead and forward my message to my ISP
if you want.

You posted your commercial ad in this ng. To me that is Spam.
I'm sure the folks at my ISP will get a chuckle out of your letter,
since all I did was post a non-profane reply to your spam, and you
couldn't write a letter without a cuss word in it if your life
depended on it.
I'm calling your bluff.
You Sir are a buffoon.

I just bought one of these little jobs. Nice radio for $149, but because it is
set up in CB like "channels" it is missing some 10M Novice/Tech+ voice frequencies, namely 28.345 (the 10X club freq), 28.395, 28.445 and 28.495. Anybody know the
mod for adding a 10kc jump switch? It already has a +/-5Kc for hitting the "zeros". It is low power [12W PEP] but seems to work decent for DX so far :-)

Also any ideas on turning the Clarifier/RIT into a actual VFO? It has a course detented tuning knob that goes about 1.5kc+/-. The RIT is inside that knob and only works as recieve tuing. It would be nice if both worked together for transmit. I would guess one could try ans modify the Clarifier/RIT to go 5kc+/-, thereby making the need for a jump obsolete.

Anyway thanks for reading! 10M openings have been great lately.

Any help would be greatly appreciated! Please reply to my email address, because my usenet access is spotty. Remove NO_SPAM from my return address.

Thanks and 73!

Oh coime on! The more snow the better! It breaks your fall when you
slip off the roof! ;o)

>Using my 1/4 wave, I can actually reach VE2TA, a repeater that is 160 km
>(100 miles) away from my home.

C'est quoi le QTH de VE2TA?

By the way I also do the same... I cannot afford to have many rigs so
I use my IC-W31 dual bander with a "twinlead" J-Pole in a window of my
appartment from the third floor. I am in the Western tip of the
island of Montreal and I reach repeaters in Vermont and New-York
state. At my country house in the Laurencians I use a 4 element Quad
for some serious long distance contacts.

Salut!

Pat

If you are involved in the design of transmission lines, directional couplers, distributed filters, or RF & microwave electronics in general, take a few minutes to acquaint yourself with TransCad(tm) Version 4, the most comprehensive single & coupled structure synthesis offering available:

http://www.webblabs.com/transcad.htm

TransCad is without peer. And with TransCad there is no single-user limitation. The one-time $1,450 license fee allows department-wide TransCad usage, with no annual support fees and free upgrades for two years! TransCad is a necessity for every department involved in the design of high frequency electronics.   For more information, see our web site or e-mail your questions. TransCad is in stock for daily shipping to any destination worldwide.

Sincerely,

Kathy Goerg

I had the same question 6 months ago when I first became a ham...

I built a "TINY 3" using the plans at:
http://www.qth.com/antenna/tiny3.htm

It is a 3 element Yagi, that has 6.5 db gain, and is also a direct connect.

I started out with it at 10 feet above the ground, worked every repeater within 150 miles with 30 watts.

Construction time was about an hour.

Spamming is sending a message to everyone or every newsgroup, whether or
not it's relevant to the receiver. It comes from the Monty Python sketch
that has the characters saying "SPAM" a lot. This would be different
from using a newsgroup for advertising.

Considering they use the word "spam" to describe the practice, I don't think
there is a definitive meaning of it...

Hello, thanks for reading this. I've just acquired a Kenwood TS-50 and
in

the early stages of trying it it I have noticed that as soon as CW mode is selected, the radio goes into TX.

I was fairly alarmed by this at first but then I calmed down a little and inserted an unconnected mono 3.5mm jack plug into the 'Key' socket.

Instant cure.

Take the plug out when in CW mode, WHAP, straight into TX mode.

The manual does not bother to explain how a key should be connected but I am virtually sure it should be normally open, closed when keyed, so it seems that the socket has an internal short. Looking at the diagram I see that the socket is pretty complex for something which theoretically only needs two connections from a push-to-make switch. The 'Key' socket includes switches, and they are used, according to the diagrams.

It occurs to me that this is there to provide an easy way to key up the TX for tuning purposes when using SSB mode, simply by blipping across to CW mode, which is a one-button press. If so it's a little dangerous because you only need to select a memory which has been programmed with the CW mode for the radio to go into TX. I find this a little bit TOO helpful.

If you have a TS-50 or have used one I would like to know if this is normal behaviour for the beast.

As a second query, I also got an AT-300 Auto-ATU with the set and I see that according to the manual, the AT-300 unit is not suitable for mobile use. Examination of the unit reveals that it only has a single wing-nut termination for the aerial, so I take it that the AT-300 is strictly an end-fed wire tuner, and that I would need the AT-50 if I wanted to drive a coax-fed antenna?

Bear with me: This is the first HF TRX I have ever owned, so what may be obvious to you is not necessarily obvious to me.

Regards, Graham Galbraith, M0ADR (U.K.)

SNIP

This is not standard, I often use CW mode to tune my manual atu, and my TS50 does not TX until you press ptt or hit the keyer.

>As a second query, I also got an AT-300 Auto-ATU with the set

```

I decided not to buy the auto ATU because it can't tune the bits of wet
string I connect to it, but a manual ATU can. I use a Vectronics VC300,
which performs well.
>
>Bear with me: This is the first HF TRX I have ever owned,

The TS50 is also very easy to modify for full HF TX capability, and if
using a manual ATU can also be tweaked to deliver much more than 100W on
SSB.

Common fault here! the socket is shot, replace it!
The switch contacts have had the WRONG 3.5 mm jack inserted in them, I
have seen this a dozen times or more.

The fellow who was going to buy this radio couldn't come up with the money, so it's for sale again.

Kenwood TS-780.
This is an all-mode dual-band base station which covers 144 to 148 MHz and 420 to 440 MHz FM, SSB, and CW.
Features include:
Built in power supply (120 volts AC or 12 volts DC.
Bright blue digital frequency readout and large illuminated S/RF meter.
VOX
2 VFO�s.
Output power - 10 or 25 watts switchable.
Noise Blanker, RIT, IF shift, F-Step, Scan, RF and AF gain, 10 Memory channels, Mike gain, priority channel, and much more.
The radio comes with hand mike, powered desk mike, original Owner�s manual, Shop Manual.
It is in excellent condition.
Price is $600.
Please contact me by e-mail. Sorry, No trades. I need the money for another project.

Responsible like you Masa? Disseminating incorrect and misleading study
information
to potential new hams?When are YOU going to take responsibility for your actions
regarding ham radio? Have you corrected your study guide yet? Uh huh, thats what I
thought.

> Morse, unfortunately, does not kick the ass out.

No morse does not kick the ass out Masa, but it's been just enough to keep your stupid ass off HF phone. For this reason and this reason alone I'll continue to support the morse exam. Gee Masa you spent all that money on an Icom 706 and can only transmit phone on two bands. What a pity.

5 will get you 10 that if he ever passes the Advanced exam, 3950 will be the first place he goes!

That was then... no more.

If I am a kid and ask someone to learn code together, I must be lonely.

Generally speaking, young people are NOT interested in working

something outside of the school (like morse) anymore.   School
stuffs are enough for them "to work."

> >   Learning the code, to some, may be old fasioned and maybe it is

Yea, God forbid you should actualk have to WORK to LEARN something. Thats an
excuse, not a valid argument.

Wrong, his point is, it's not hard so stop using lame excuses and do it.

OK so what's YOUR point. Make an argument. State your case, or shut up.

Graham

Hi Massa, Maybe not for you but please don't generalize for all of the world's youth. In fact how can you speak for the youth of America when you have no first hand experience?

Now I don't have first hand experience with the youth of Japan, but from everything I have read and heard they seem to be very self starting and quite willing to take on new tasks.

> If I am a kid and ask someone to learn code together, I must be
> lonely.

Well Masa, there are probably a lot more lonely kids out there surfing the internet than there are working to get their ham license. At least those who get their license will have the opportunity to meet friends in a real time mode on the air and to join and do interesting things at their local radio club.

> Generally speaking, young people are NOT interested in working
> something outside of the school (like morse) anymore.   School
> stuffs are enough for them "to work."

Excuse me Masa but just what planet are you from? I know a fair amount of young people in school ranging from 2nd grade to college, and I don't know of a one that is not involved in many activities outside of school. Maybe you can enlighten us by giving some examples of people you know?

Or maybe you are speaking from personal experience? If so Masa, I really feel sorry for you. You are missing out on a lot interesting things in life. But there is still time to get off the computer and get out and start enjoying life.

> requirement.

His point Masa, is just what he said. It isn't hard. Simple.

Please tell me why it is a useless requirement if it isn't hard?   If it were harder would the no-code folk find it a useful requirement? I don't think so.

Heck the theory for the tech license isn't hard either. So is it useless?

Now that this thread is turning into a code/no-code issue maybe we should move it to .policy....

Yes , this a nice Methode ..
You have a AX25 Device , and you can work with more Software via
AX25 Device (TCPIP) to Packet

Hello!

I have an 8-channel Motorola Maxtrac/Radius VHF-Lo Band radio. I have 4 channels programmed to Red Cross frequencies, and used the RSS to successfully program the other 4 channels to local 6 meter frequencies. Is this radio capable of tuning both sets of frequencies without re-tuning the radio? At present, it transmits AOK on the Red Cross frequencies, but does not on the 6 meter channels. I did notice during programming, that the RSS displayed a caution/error message on the need to possibly re-tune. Any suggestions or assistance would be greatly appreciated on this. Thank you in advance!!!

Glen is it necessary, to vent your frustrations with someone posting something
that does not suit you in .misc, to jump on them here in.policy.

Don't touch the VCO. The voltage for the VCO (and most other) test
points is nominal. The change in power across the band suggest a
mismatch to the antenna. By how much is it changing and what are you
using to measure the power?

You did not say what the Rec Cross frequencies are. One thing, if they are very far from the 6M freqs, you'll have problems getting an acceptable SWR on the antenna. I use UHF Maxtrac/Radius radios from 441 to 468 MHz TX with no problems, even with the same antenna. That "Tuning error" message you got when programming is normal, and not normally needs to be heeded, but mayby in your case, the radio does need tuning.

Thanks very much for the reply. The Red Cross frequencies are all 47MHz
frequencies. The 6m frequencies are repeater pairs up near 51MHz. Still
no output from the 6m channels though! I don't know how wide the radio
tune!

Steve KC6IJM

No.  When the off-topic messages stop, I'll stop reminding folks,
politely, that there's a newsgroup specifically created for discussing
Code/No Code issues.

My little campaign has already worked much better than I had expected.
Most of the offending messages have been moved, and those few who
persist in posting off-topic messages are being added to killfiles.
It's your choice which path you take.

I said no one would be interested in amateur radio if they had to learn the material and to take the exam in order to use the radio. If they can use the radio right away and make contacts, I am sure they will be interested in amateur radio.

The amateur radio is not an entertainment (generally speaking for most of people). Many are looking entertainment outside of school hours or office hours or whatever.

Masa, you seem to think you speak for a majority. I can assure you Masa. You are a very unique individual. Your opinions don't bare any credence with me. Masa, how many of your supporters have collaborated your remarks? I've seen a scant few. I have followed your posts for several weeks. I've looked you up in Dejanews. Give up Masa, you are out numbered. You are a fool - Bakana!

>goodies.....

Then he needs to buy a clue with the money he saves. Web TV lamers make
AOLers look like gurus. At least AOLers use a real computer for their
software. He probably still runs a VIC-20 for everything in his shack.

>Stooping to put down someone's net access is just another of the obvious
signs

DNULT:
Masa is trying to express himself in a language that is not native to him.
If you had to write and post in his native country using his language and
alphabet you would probably have a difficult time making your case for
keeping the code. Masa is an easy target for people like you and some of the
others to attack.  If you don't like what he posted counter with an argument
in his native language. I doubt you will agree to debate him in his native
language since that would give him the same advantage you and others have
over him by coming from a culture that speaks and writes English.

For Sale:
           Ten-Tec model #238 Tuner.
This tuner is in absolutly like new condition, I sold
this tuner back in 1991 when I was a TenTec dealer to an
older fellow, and he never did get around to using it. He's
asked me to sell it for him.

With original Box, Manual.   $275 + $7. shipping.

I can Email you some specs and a photo if your
not familier with the #238. This is also still a
currently availible model and you might be
able to find out more it at.....
       http://www.tentec.com/

Email me....

Is Glen so egotistical that he thinks that someone is going to have
their feelings hurt if Glen puts them in a kill file, what ever that is.
"You better do as I say or I will ignore you, I'll show You".
That seems to be his attitude. Then the dumb butt when he
tries to jump on someone for a post in .misc he cross posts it
in .policy. Get a life Glen, oh I forgot, you put me in that
terrible kill file. Ohy well, maybe someone will copy this
so you get to see it anyway.

That is alright Masa: I have been attacked by people over the years, that
would make some of these guys cry like a baby. I'm thick skinned,ill natured
and hard to get along with and those are my good points. The one thing I
can't stand is intolerance and arrogance.

Masa you hit it right on the head again. And they worry about you not
communicating. I just love it when somebodys whipping boy sticks it to
em. Hang in there buddy and let the wrath of the small ones splash upon
their monitors.

Cheers

If you had to write and post in his native country using his language and alphabet you would probably have a difficult time making your case for keeping the code. Masa is an easy target for people like you and some of the others to attack. If you don't like what he posted counter with an argument in his native language. I doubt you will agree to debate him in his native language since that would give him the same advantage you and others have over him by coming from a culture that speaks and writes English.
>
> KF4HMN

Masa is an easy target because he is immature, it has nothing to do with using English or Japanese. Masa joined the news group with bizarre posts like "how can I talk to police on police frequencies?" claiming he wanted to "thank them" for doing a good job. Other famous posts include wanting to know how to 'jam' FM broadcast stations and the like He spams the news group with advertisements for his "Professional" Canadian radio study guide, full of incorrect information and spelling errors, then he wonders why no one has sent him the $20 fee he asks for downloading the guide. As far as debating him in his native tongue, I guess if I were living in Japan and posting to a ham radio news group in Japanese I'd do a lot of reading and not jump in as an authority on things I know nothing about.

I don't know who you are Mr Townsend, but you could be me in another
life.  My sentiments exactly.  Those two attributes suck all credibility
from any one choosing to exibit them.  There are times I get a tad
cranky about a situation and become somewhat intolerant but it's not my
nature and I get over it quick.

Thanks for your remarks.

Which they can now. *Anyone* can use ham radio to make contacts, even without a license. All that is required is that there is a properly licensed amateur radio operator acting as the control operator and that they operate in accordance with the rules and regulations.

> The amateur radio is not an entertainment (generally speaking for most
> of people). Many are looking entertainment outside of school hours or
> office hours or whatever.

Generally speaking, for most people, driving a car is not entertainment. But for people who *like* driving a car, maybe it is. Generally speaking, for most people, flying kites is not entertainment. But for those people who *like* flying kites, maybe it is. Generally speaking, for most people, amateur radio is not entertainment. But for those interested in amateur radio, maybe it it is. The point (because I know you won't be able to see it without me explaining it to you!) is that those who are looking for entertainment outside of school or office hours will tend to try to do what interests them. If they are interested in amateur radio, that's what they'll try to do. If they are interested in progressing through the license structure, then they will do whatever is necessary to progress. If they want to get on the air right away, then they'll visit a ham club, or an individual ham radio operator, and get on the air (even on the Extra Class sub-bands if the control operator is an Extra class licensee).

All you're doing, Masa, is trying to make excuses. As I've said to you on several occasions in private email, there are *many* reasons why code should not be a requirement for HF licensing. You just can't come up with any of them... you just make excuses, most of which are pretty dumb.

Julian

well written, well done.

I think they are going to remove your license also.

Thank you for taking the time to read this.

If you are a dyslexic ham or know someone who is....please write to me and
tell me how you or they overcame their disability to become a ham.
My girlfriend is dyslexic. She is also willing (I think) to learn to get her
ham license, and I want to help her. I want to hear of some ideas to help
her.
Thanks in advance.

For Sale:
Ten-Tec model #238 Tuner.
This tuner is in absolutly like new condition, I sold
this tuner back in 1991 when I was a TenTec dealer to an
older fellow, and he never did get around to using it. He's
asked me to sell it for him.

With original Box, Manual. $275 + $7. shipping.

I can Email you some specs and a photo if your
not familier with the #238. This is also still a
currently availible model and you might be
able to find out more it at.....
http://www.tentec.com/

I checked the dictionary before replying, to make sure 'steake' and
'athine' were not words. Either you're spouting big words which I have
not yet learned, or you goof on your code chart.

Curtis, I am begining to wonder just what the hell the Navy taught you in 20 years. First, from the size of the chip on your shoulder, I think the Navy would have done better to loan you to the Marines so you could get some serious fighting done rather than just sit around in the Comm Center pounding your key. I for one appreciate what your efforts did for the country but I do wonder.

As for the Saddle mounted CB? It was a Hand Held unit and used Batterys. Am I wrong in assuming you also learned Radio Repair, and if so, did they not teach you about batterys?

BTW Curtis, he also had a BC radio, loved his C & W music.

Regards

```

Ok Ed Ill bite back.
My HF and VHF stations operate off of 12 volts. I have two deep cycle marine batteries that can operate my stations for many hours before needing a charge. And when the charge is needed I have my choice between one pickup/camper, two cars, one SUV, or one motorcycle to do the charging for me in quick order.

Antenna blown down? No problem I have a portable antenna system that consists of a 40 foot mast with a vhf vertical on the top and the apex of a g5rv hf antenna just below that. I can put it up in under 20 minutes. Great fun for camping. Get to do some ham radio after a day of fishing.   Also great for being prepared for emergencies.

I can get on portable on all modes that I work at home. CW, SSB, FM, Digital...

Hello!

I have an 8-channel Motorola Maxtrac/Radius VHF-Lo Band radio. I have 4 channels programmed to Red Cross frequencies, and used the RSS to successfully program the other 4 channels to local 6 meter frequencies. Is this radio capable of tuning both sets of frequencies without re-tuning the radio? At present, it transmits AOK on the Red Cross frequencies, but does not on the 6 meter channels. I did notice during programming, that the RSS displayed a caution/error message on the need to possibly re-tune. Any suggestions or assistance would be greatly appreciated on this. Thank you in advance!!!

You are using Netscape 3, it handles the HTML. People using
newsreaders, rather than browsers see the whole message in text,
followed by the whole message with HTML tags. if you want to see what
I see, select view...page source... HTML/text posings like this are 3
times the size of a plain text posting.

Perhaps, I worded my posted message incorrectly. The unit is in excellent
condition. I still possess the original manufactures box, manual,
accessories(excluding options). The unit has been rarely used. The sale
would be final. I would be willing to include a wideband omnidirectional
discone antenna for no lower than $850, shipping included.

and location is what... nothing else you can do with CW...

say... "Canada" or "US" will not be understood by who doesn't know
any English "at all " since we don't spell "Canada" or "US" in Asian
languages... I don't know how they are going to do it.   well...
let's say you can send your QTH somehow...   now... then what are you
going to do next ??   Talk about power output or something ?? huh
??????

That is what I said, I think. What I did not say was somethingstupid and lump all
no-coders into one, as you just did the
pro-coders.

What problems are the coders creating except for maybe you
not being able to copy them and you wondering if they are
talking about you. Way to solve that problem is learn the code.
To save you some time though, I can almost guarantee you that
they are not talking about you. You are probably the fartherest
thing from being on their minds.

This has been explained to you before in great detail but you still don't get it,
and you never will until you do it yourself.
The reason you "don't know how they are going to do it" is because you don't
listen
very well. People have presented lots of examples of how CW, while not perfect,
can
enhance a DX contact where two different languages are spoken.

Why not get on the air and make some contacts, work some DX, find out for yourself
how it's done. Perhaps if you come back to the news group with some credibility
people will actually consider your arguments instead of just laughing at you, and
responding to your posts for amusment only.

Tim, cannot those same "enhancements" work on SSB or with other modes?

While there are a lot of people who do not listen well (newsgroups are full of them, some days <grin>) it is also true that CW/Morse is credited with abilities that are not the results of CW or Morse, but are the results of people working around the limitations of the mode. Those same "work arounds" are just as valid and useful in other modes.

Go right on defending CW and Morse use. Defend the current requirements, if you wish (and can). But please note that it is NOT the CW or Morse that is enhancing the contacts -- it is a collection of shortcuts which also can be used on other modes.

CW/Morse, BY ITSELF, cannot enhance communications when two different languages are spoken.

Leadership, Chastise? Take a break mister, you nor I are here in a
"Leadership" capacity. We are what is known as peers. And the answer
to your ? is No. My father taught those principals and the Army
reiterated them for me.

You never know and who cares what they want if you are doing your country a big favor? I rather thought I was giving you a compliment Re your fighting ability as I percieved it from your posts.

>

> more like a caress.

Curtis, don't flatter yourself, I quit thinking about "pounding" a key years ago. I found I could get no faster than 30 wpm, got real depressed cause I couldn't keep up with my cousin and quit. Yea I'm a quitter, had better things to do, and in the old days most real hams refered to it as pounding.

>

Most welcome Friend.

>
> > but I do wonder.
>
> Wonder what, spit it out, don't mealy mouth around. What do you wonder?

I really hate spitting but here goes. I was wondering how it could be possible that someone of you obvious and wonderous talents could not figure out that a hand held unit, weather hanging from a saddle horn or sitting on a car seat must be running on batterys. Obviously you do know but had to show you also know that a byproduct from hay going thru a horse gives us methane. Thats good, but at the time I focused more on you not coming up with "batterys".

>
> > As for the Saddle mounted CB? It was a Hand Held unit and used

As stated before Curtis I will not make the mistake of taking you serious again, and I never even think about myself much less take me serious.
>
> > BTW Curtis, he also had a BC radio, loved his C & W music.

>

> Good, did he kiss his horse?

Now you see Curtis? You were doing real good up to here then you went into that mode again. I can certainly see why I am not to take you serious tho and I do thank you for the little object lesson on why. But to answer your Question; No he didn't. He is from New Mexico, not Texas.

On that wide a split, you will need to retune...MAYBE able to get it to cover both freqs....but depends on the tuning range of the radio....

I got a GE Delta to cover 48 and 52 MHz but the rcvr was now at .7uv up from .2uv when tuned on one channel....

PS dont post non-for sale/swap msgs in the SWAP area please!

Then you obviously wont be one of those worrying that the 7/11 is closed
for the winter so you can't buy a battery for a rig.

BTW Mark, could you adopt me for a summer or so? I could use some of
the life you described. Would you be in Colorado? I was all set to go
Elk hunting there but my wife who was expecting, waited for the season
to end before delivering. Carried that girl 14 months I swear.

One more question, are you hooked up with any organized emergency Comm
Crews in your area? I once helped a guy, No ticket, but wanted to help
any way, set up a brand new RV for an emergency vehicle. We made it
ready to accomodate equipment from pre-determined Hams to include any
kind of power source needed at the time. That RV was on standby in S.
Cal for many years to be used when needed. He never that I know of got
a ticket, he just liked being around all that action.

You *CAN'T* make the CPU do something that is not
already programmed into the firmware. Ferinstance,
if the code doesn't exist for tuning the cellular
bands, then no amount of monkeying with the keypad
matrix array will work.

Likewise....if there is an RxD port, but no firmware
for cellular, then you're not going to get it, no
matter what you do or what instructions you send into
that port.

In a word, you can't get blood out of turnips.

Hello.   I just listened to the Liberty Net last night.

The participants hold PTT for several minutes... even worse... some
hold PTT for more than 10 minutes... well... no breaks in between.

I hope they don't think they own the frequency.

If they are using the repeater, they will be time out...

```

Hmmm...didn't know it was unreadable before.  It read just fine to me.
OHHHH, I see... there was too much stuff that YOU didn't want to read
on here that you appointed yourself moderator.  Gee, Glen, don't  ya'
think that, maybe...just maybe, there are some people on this NG who
really do want to listen to this discussion...ON THIS NG!!!
Apparently the above posting of yours  is the only example of the type
of "readable" communication YOU think you can offer...frankly, I get
damn tired of seeing it over and over. Do you think anyone cares??
I, for one, don't.

I read your message sometime ago and just read it again.
I am not saying that you are right or wrong but I would like to tell
you a story that happen to me.
I am guess on the time/day but I think it was the early 70's.   To a
great extend things were somewhat the same as now, just the technology
has changed.
I used to go to a club meeting and felt very much out of place. My
station was not the same as the going stations. And most of the
fellows had money to burn, I was just about fresh out of college.
One day, as I enter the club room, I decided that I was going to
change my attitude. As the members came in I greeted them, rather
than expecting them to greet me.
I found a significant change in ther attitude toward me. Soon I
became quite a respected member of the club.
I got involved in club projects and showed them my talent without
pushing me out. Plus I allowed them to show me their talent.
Even though we came from different age groups, them about 20 years
older than I, we soon got along very well.
I am now at the age where you might call me one of the old f....ts.
But I am still trying to learn from the newer groups. I do have my
opinions but i try to listen to them as well as talik to them.
Some other the younger fellows are surprised at my willingness to
still learn.
I still consider amateur raido a two way street as long as they keep
it that way.

If we didn't have code we'd have a large-band CB. If there is ever no-code
HF with restricted bands, we will have people who slip into other bands
anyway, since the rigs cover them. Oh well, I'd just keep the code, it's
more fun than phone (to me). Also, how hard is 5 wpm?

Gentlemen:
To me you seem to be knowledgeable with good jobs. Your post can be debated very nicely and with a measure of dignity. Why use fowl language to put your point across? The same can be accomplished without it. We really urge all hams on the groups to "speak" as if we were on the ham bands. We don't want government regulations on the internet as we have on the air with the FCC. Please do not be offended by what I have said, for ham radio is still the best hobby one can indulge. Thanks.
Costas-rp

What does that have to do with anything Masa? Ed asked the question as to how many hams had emergency power. Did you read the rest of the post? Why in the world would I want to use AA batteries to provide the power that two deep cycle lead acid batteries do?

So you say I am the only ham that has emergency power or antenna? Would you please enlighten us all on where you get your facts? I don't know about the great white north but in my part of the country there is a very large participation during field day with all classes of operators putting up portable stations. Why do you have to always pull your fellow radio brothers into the mud just so you can make a cute comment?

The only use I can think of for 7/11 in that case would be for a source of hot coffee if I ran out of propane......

> BTW Mark, could you adopt me for a summer or so? I could use some of
> the life you described.

Heck Ed, you hail from New Mexico You all have got some rite nice places down there. I don't even think you have been bombarded by the *California Invasion* yet.... (hi, hi)

But come on up

> Would you be in Colorado?

Yep.... Except when I go to Wyoming, Utah, Montana, New Mexico, or the Dakotas for similar fun....

> I was all set to go
> Elk hunting there but my wife who was expecting, waited for the season

Well there will be another season coming up this year.   There are some mighty fine places to hunt just north of the New Mexico boarder on the West side of the state.

> Carried that girl 14 months I swear.

If it was a boy, he would have been right on time. You know women they are always late..... (Just kidding dear YLs)

> One more question, are you hooked up with any organized emergency Comm
> Crews in your area?

Over the years I have been hooked up with several. Everything from RACES, ARES, to doing commercial work though my employer.

Most of the local governments have RV based mobile emergency command centers around here. Many of them are equipped with ham radio capabilities.

Not to defend the libernut net but what is your point?   They can transmit longer than 10 minutes if they like. As long as they identify once every 10 minutes during that transmission.

I need some clarafication on something i was told in line with a power output problem IVE been having.

first ....i have a dualbander that on UHF puts out more power on the lower edge of the band than the top.

now another ham told me after getting the repair manual from yaseu that i should check the vco voltage and compare it with the specs in the manual.

well, the voltage is a little low, but the radio is on freq across the band.

so, my question- is the other ham right in saying that the vco voltage is causing the low power output. and if this is true do i need to realign the radio according to the procedure in the repair manual

I am interested in putting a station up on TCP/IP on one of my "spare" Macs (I have several older ones "laying around"). I have put a Mac Plus up on Net/Mac before. But I'm wondering about MkLinux. Is it possible to install MkLinux on a machine and just install extra drivers to run the extra TCP/IP for amateur radio? Are the Unix drivers for amateur radio compatible with MkLinux? Is there advantages of one over the other?

I'd be real interested in hearing about others experiences with getting Macs on TCP/IP.

Thanks,

If you two newbies dont like the way I type or my prices, why not just ignore
them?  You are obviously CBers and one of you is using your girlfriends webtv
to no good purpose. If you have person messages, send em direct.  Since you
were public, allow me to respond.   BITE ME !!

KB8UYZ.COM's newest site is that of Dave AA2DW. Dave's links page is still growing, but contains many different links to sites all across the internet. You can access his page at http://kb8uyz.com/aa2dw.

Also, we have taken our American Patriot News page offline, due to lack of time. In its place, we have added a Patriot Links Page, which can be found at http://kb8uyz.com/patriot. This page will continue to be updated.

Anyone wishing to access our DHCOM.COM server may have noticed some trouble. The server went offline last week, and we are working to quickly resolve the situation. All of the sites on DHCOM.COM can still be accessed on our MEGAMAN Server, at http://megaman.dhcom.com.

And don't forget to visit http://kb8uyz.com ... your amateur radio news and information source on the internet!

80m propagation is fairly good nowadays.

"W9**, you are jamming the frequency...   W9**, you are jamming the frequency..."

"W1*** is tape recording it...   W9*** and W9**   you are jamming the frequency !!!!! "

3950 is not a good frequency to listen to... well... I hope FCC/IC removes morse to let responsible people into HF bands very soon.

Morse, unfortunately, does not kick the ass out.

Burt when you finally decide to send your letter to all the newspapers around the country be sure and tell them the part about how you think Germans are genetically programmed to kill Jews, it should really help get your point across.

Tim, ka8ddz

It is working well. Since you aren't in it _yet_, I still see your
messages.

A Friend of mine is selling a scanner, it's a radio shack pro-34 scanner, It comes with a ni-cad battery pack, and a ac adapter, He's asking $100.00 for it. It's in good shape. His name is Dwayne and you can reach at the following numbers:

Home Telephone (Best after 6:00P.M. EST) 1-313-388-3520
Cell Phone: 1-313-530-9139
Pager: 1-313-877-5441

Please Note: I've only seen this Scanner once, so, I can't really speak for it. so, don't come after me if it's not in the shape you wanted! :-)

Just doing a friend a favor.

>Eagle Sidewinder 400:

How much of the 10 Meter band does it cover with the jumper in the stock position?
Somewhere I saw 28.315-28.755 or something, right? Sort of odd if it doesn't go higher. FM section is much higher in the band. Hmmm...

What is the total frequency coverage with the jumper moved?
26-30? Any chance of 12M?

Also, is there anyway to reach the "a" channels that are skipped in the 10M band?
I would guess 28.345, 28.395, etc.

I ordered one, but am trying to figure out all the logistics. I intend on using it on 10M, the Novice/Tech+ voice section 28.3-28.5.

It appears that with the jumper moved it has "bands"? Could someone explain!

The Copper site and catalog do a fairly poor job of explaining exactly what this thing does, but for $149, I guess I shouldn't complain.

The output is a bit low for 10M. What will the "tune-up" give you for output on SSB?

Please reply to my e-mail as I have spotty usenet access.

Thanks & 73
de Xopher

I have a near perfect TS-940S/AT for sale. Includes hand mic, manuals &
original boxes (inner & outer). Also included is the SP-940 Speaker, And
PC-1A Phone Patch. This radio is a 9.8 on appearance and 10 on performance.
I've got 'new radio' fever but I don't 'HAVE' to sell this radio so PLEASE
don't waste either of our time with low-ball offers. $1350 (and worth it!).
Prefer local sale so I can demo the radio but will ship at your expense.

E-mail if interested

Hello.

This is to notify that one of the pro-CWers is subscribing something
[e-mail list] by using my e-mail address without my consent.

This is not acceptable. It is no better than posting by using
someone else's e-mail address.

You better beware when "we" find out who is responsible for this (and
I almost know who he is... only I need to do is to check the domain).

In fact, there were some legal cases of using someone else's e-mail
address. I also do not hesitate to take you to court.

Please remember, it is a criminal activity.

Please do not poke fun about this.

Thank you for your consideration in this manner.

```

Thank you for the reply. I did visit your site and found some useful links,
but there doesn't seem to be a lot of info on TCP/IP for ham radio on any
of the links I explored.

Can you tell me some more about how this is setup? Where do I get the AX25
device? How do I install/configure it? Will it work with all the versions
of Linux for Mac (MacBSD, MkLinux, etc)? (I only have one PPC and had been
planning on using a 68k Mac, which counts out MkLinux. Perhaps I can get a
good second-hand PPC.)

Do you know of any other Ham specific Linux resources (especially stuff
that will help me install and configure it)?

Thank you very much,

I realize this thing is no Yaesu, but with my limited $$$ and the fact that conditions have improved and will continue to do so, I thought it might be better than NO 10M radio in the car. I travel quite a bit on the weekends, this will allow me to make some 10M contacts when I'm not at the base (which is a semi-cheapie RCI-2950 with which I make all sorts of National and International DX contacts BTW.) Perhaps I'll try and run an amplifier in the car too, who knows. Thanks for the comment anyway.

I don't think he desrves one if he's going to start trying to
destroy the hobby for everyone else. He should burn his own and not
show his voice on the bands again.

Hello.

This is to notify that one of the pro-CWers is subscribing something
[e-mail list] by using my e-mail address without my consent.

This is not acceptable.   It is no better than posting by using
someone else's e-mail address.

You better beware when "we" find out who is responsible for this (and
I almost know who he is... only I need to do is to check the domain).

In fact, there were some legal cases of using someone else's e-mail
address. I also do not hesitate to take you to court.

Please remember, it is a criminal activity.

Please do not poke fun about this.

Thank you for your consideration in this manner.

Yea so is transmitting illegally on police frequencies and jamming FM broadcast transmissionsOhhhhh how quickly we forget aye Masa?

> Please do not poke fun about this.
>
> Thank you for your consideration in this manner.

Gee it's funny how Masa's command of English improved ten fold when he starts talking about taking someone to court.

By the way Masa, it should make for an interesting court case if when you find the perp and he turns out to be 'someone from somewhere' other than Canada. I suspect after spending ten thousand dollars in legal fee's your almost certain to win. The judgment? A cease and desist order at best... *yawn*

Well, who was it?

After all, you *MUST* know who it was, since you OBVIOUSLY know he/she
is "Pro-CW".

It *COULDN'T* possibly be a no-coder who just thinks you are a twit, right?

>In fact, there were some legal cases of using someone else's e-mail

That would be pretty amusing -- someone in Canada taking someone who
isn't in Canada (presumably, since most RRAM/P users are US-based) to
court. Maybe you should contact our resident legal authority, Spew Durigan.

Hi,

I am trying to obtain two Communique HX507 hand held two way radio's, I have a complete system (ie base stn, chargers, batteries etc) apart from two bodies and would like to make use of them. I am told these units are about 7yrs old and are no longer made. If anyone has any for sale or could point me in the right direction I would be most grateful.

Regards,
Andy Daws

I am a Dyslexic ham (well almost, I passed my TECH test but the darn FCC computer is down so they haven't proccessed my app yet). I am 29 and my dyslexia is not real bad. I just have to remember to slow down- and say what I want to say clearly. I find that saying things to my self first be fore saying things out loud helps me alot. But this approach has lead to lots of people thinking I am nuts for talking to my self all the time. I only missed one question when I took my TECH exam. Most of this is due to the fact that it was a quite test enviroment and I was allowed to use a calculator. I can do Calculus and Differintial equations all day long but ask me what 6*8 is and I go stupid. I am having alot of trouble with learning code. But I hope to pass my 5wpm in time. I just need to work on it every day and tough it out. I do not feel I should get any special treatment/privleges because I am "special" . Infact I feel that my dyslexia has helped me in my choosen field of work. I am a computer programer. through school I had very poor grades, due to a poor memory/attention span with the dyslexia. by gettting a computer I was able to organize my thoughts in a way that made sense to me- not the teacher. Now my Logic ablities are very sharp and I find that I can write some very awsome code, but it does take me a while to make it work, lots of spelling errors and transposed numbers. but the logic in my code is alway excellent. this comes from special class I had to attend in primary school. they tought me to slow down and break problems up into small parts, solve the small parts and you solve the big problem.

I recomend to your friend to go for it, but study the stuff your way not
the way the books lay it out. I found the most help from this web site

<http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html>

It let me take the exam over and over until I could do from memory. and
none of the questions on my real test where a suprise. I lucked out onmy
test and onlyhad one question about bandplans. (I have a hard time
remembering what freq rang I can due what in.)

Sorry if I rambled on here, but let me know if I can be of assistance in
the future.

Subject: TH-G71A MOD, I HAVE IT!
Date: 1998/02/23
Message-ID: <34f1f1e1.0@heather.surfsouth.com>#1/1
X-Deja-AN: 327964979
X-MimeOLE: Produced By Microsoft MimeOLE V4.72.2106.4
Organization: Surf South, Inc.
Newsgroups: rec.radio.amateur.equipment,rec.radio.amateur,rec.ham-radio,rec.ham-radio.swap

Hi,

I have the mod for the TH-G71A. The specs are:

AFTER MOD RX Capability:

```
136.000 - 173.995       400.000 - 469.995
320.000 - 399.99375  800.000 - 823.9875
849.000 - 868.9875    894.000 - 949.9875
```

If you want a copy of the mod sheet you can do 1 of 2 things:

Send an SASE to: Graham Crosby
2506 Devon Drive
Albany, GA 31707

OR 2:

Log back on tonight about 9:00 PM. I will scan and post it in BMP format .

73,
Graham

If anyone has mods for the Standard C 510 A, I would appreciate it if you would e-mail them to me. It is a new radio and I don't know if anyone has even tried any mods to this radio or if it IS modifiable.
Thanks,   Jamie

Holy Cow, Daryl, how many groups did you post this to?? Sorry...but I trimmed the response to just r.r.a.homebrew...hope that works...it seems like the right one.

You could do it two different ways...either put a transmitter on the cat, or a receiver...well, you could put a receiver-transmitter (transponder), I suppose, instead.

Transmitter on cat: you use a direction finding antenna to find the cat. You really don't need much power for this, as long as the cat isn't in the habit of burrowing underground or crawling into culverts. 1 milliwatt should be PLENTY. There's a cute Motorola IC that can do this sort of thing, crystal controlled...you could add a tiny 555 to pulse it on occasionally. Would involve some construction. 445MHz would be a reasonable frequency. And you might get interested enough in fox hunting to get involved (or start??) a local group!

Receiver on cat: (smiley face on...) You could try to whisper sweet nothings into the cat's ear through the receiver, but if he doesn't come to your calls now, he probably wouldn't then. But you could also hook it up to give him a good shock, so he'd let out a loud MMEOWLLL when you key your transmitter...making him easy to find. (Sorry...smiley face off)

Transponder on cat: Kinda like the transmitter on the cat, but there are ways you can get more info. You could get round-trip times for the RF and get an idea of range. (Tough to do very accurately!!) You could put a GPS on the cat and have it report back the location when queried. ...

OK, OK, only the transmitter seems to make much sense. Power budget: 10mW. Package it in a 9V rechargeable battery case, using 3 of the 6 cells for power (removing the others to make room for the transmitter). 100mAH...should run for quite a few hours per charge. Pulse it to extend the life further...say 5 seconds on, 10 off. Antenna can be the collar that holds the transmitter on the cat. You can arrange to recharge thru the same terminals as you use for the antenna...and those are just the battery term's.

--
Cheers,
Tom

You can now find the mods for the Kenwood TH-G71A HT, On my site,
http://www.angelfire.com/ca/ke6gwf/
Note; Currently I only have the wide band Receive mods. If any of you have,
or know were I can find, the full Transmit mods, please let me know.
I will post them, as well pictures that I took with the radio apart, as soon as I get them.
Thank you, Ben (KE6GWF)

P.S. I did the receive mods on mine last night, and everything seems to be working all right.
After mod Rx capability.

language who you are. Who's email address are you using Mr.
investigation.

I'm no lawyer, but I wonder just what grounds you think would win you a judgment against someone using your email address. Your email address is not copyrighted. If this subscription caused you personal harm and anguish...maybe. What did the purp do codesucker, subscribe you to the gay and lesbian code haters news letter?

What a joke - backana. If you weren't so well liked, you wouldn't attract that kind of attention.

If the radio is within spec (freq wise) across the band, the vco voltage is probably correct. Now one thing you can check., is the amplititude of the vco decreasing as you go across the band. If this is true you will have a lower signal into the mixer,,,,,lower power out. One last thing when you you notice a decrease in power do you notice an increase of current draw??? This could indicate an impedance mismatch. If its lower,...look at the vco.

WTB: ADI AT-600.

I am looking for this radio. If it has already had the hardware mod to *transmit* at 470Mhz, I will pay extra money. Send e-mail to ginger@columbus.rr.com

Thanks

-Todd

Matt K. wrote:

> If we didn't have code we'd have a large-band CB. If there is ever no-code HF with restricted bands, we will have people who slip into other bands anyway, since the rigs cover them. Oh well, I'd just keep the code, it's more fun than phone (to me). Also, how hard is 5 wpm?

The HAM bands have been a lot like CB for some time. Code poficiency never has and never will equal or promise good character. I have met in my own home town, excellent code operators, who were very interested in seeing that I learned things their way, but had no respect for what I had to say or contribute.

Before I go any further, I will say that although I don't have a code license and am not interested in operating code, I don't complain about it. If my desire to operate on HF is big enough, I'll put my nose to the grinding stone and learn it in order to pass the test. I don't think that code is useless or bad, or that the requirement for code should go away, I'm just not interested in doing it.

I guess the point that I'm getting to is that the whole Code/ No Code argument is the simptom of a larger and more complicated conflict of young vs. old, traditionalist vs. modernist, etc. For instance, the local Ham radio club that I was a member of had meetings twice a month. I had a hard time getting to the meetings regularly, but had an idea to do a Ham Radio/Technology TV show for public access. Despite presenting a clear plan and asking for questions and comments, I got stares. Stares as if I had corn growing out of my ears. Here I was, trying to contribute in a way that I am skilled in (a local TV show would have brought a lot of knowlege of Ham Radio and technology to the public and other Hams as well), but they just didn't care.

Code is an efficient means of communications that doesn't require fancy electronics and/or complicated methodology. For that reason, it should stay, not for the stupid contention that code proficiency means good character, dedication, responsibility, respect, or worthyness. It takes just as much work and dedication to learn or utilize anything, HAM related or not.

That's my 2 cents
Tim KC7LEC

Calling all elmers...

I've been away from the hobby for some years now but have once again been bitten by the bug. I've always operated QRP CW-only and would like to continue my quest. I have however opted to set aside the old direct conversion rig for something better. Being a homebrewer at heart, I can't bring myself to pay good $$$ for a commercial rig and would like to construct my own. Can anyone recommend a nice HF receiver kit or design. I've not see an ARRL handbook in 15 years. Maybe I'll pick one up and see what I can find there.

Any and all suggestions appreciated.

Please limit this Code/No Code discussion to rec.radio.amateur.policy,
which was created specifically for code arguments.

Thank you for helping to make rec.radio.amateur.misc readable again.

Yes. In next 5 years, the CW requirement will be dropped or at least
lowered.

The trouble with Masa's signal.

Poor old Masa. No matter how hard he tried, he just couldn't put out enough a large enough signal to penetrate the QRM. His signal was so small and weak that it could barely stand above the noise floor. He went from band to band, scanning up and down, looking for an opening in the pile-up. Masa could hear the other hear the other hams do it, but he just didn't have the signal to be able to join in himself. Then he tried some nets. The XYLs regarded his signal to be nearly imperceptible and not worthy of a any response. Even the Drakes and swans, had a bigger and stronger signal than he. Masa was so jealous of the other hams. They all S9 reports with their big beams with high front to back ratios and never bothered point them in his direction.

Masa tried a variety of modes to get his signal out. He tried it orally using SSB Modulation. That failed. He tried use digital means to get out some signal but his FSK'ing produced no response. The other packeteers were unimpressed. Masa tried to use CW, but he was completely unable to bang his key in the proper rhythmic fashion. An automatic keyer only produced intermittent dit dahs for him.

Masa had to take a long hard look at his Kenwood. It just couldn't get the job done right. Anylasis of the two power transistors revealed that his experimentation with proper neutralization techniques in the past severely damaged them. Unfortuantly, those transistors were of a proprietary type and replacing them would be impossible. His HF rig would be stuck operating QRP for life. Local VHF operations with his micro sized HT were much easier to make. To contact the police, it was just a matter of pulling off a jumper, slapping on a rubber ducky, and saying "Hi". It was always by his pocket for easy grabbing. The driver section of the transmitter stage always had a slight leakage problem.

Masa considered purchasing a tube-type linear amplifier to extend his range, but it was too expensive. In order for him to bring it up on the air he would have to follow a new operating procedure. Besides, Masa was very nervous about the idea of getting his hut rewired to accommodate the amplifier.

Stuck with a low output, Masa had to try to optimize his antenna system to work with the limited length of wire he had. High impedance levels were the biggest problem. Masa sat alone in his room for hours to find a solution to his problem. In the end Masa decided that he would only SWL.

Now he spends all his time on the receiving end.

Er, uh, Jim--I think you missed the attribution--that quote came from the Cutie Pie. He had been invited to copilot a kamikazi plane on a trip to the surface of Mt Fuji.......

Not real sure why my name was included in this post.
Neither of the two comments were mine. Surely just
a simple oversite on Tim's part. What I did post
was something about Masa's Canadian or Japanese
license status vs his comments about US licenses.

BTW Tim. If the RAC does go for your proposal, be sure
to let Masa know so he can update his -

"Complete On Line, Non Proof Read,
Nearly Impossible to Understand Guide
to Amateur Radio Licensing"

I'd hate to see inaccurate info coming from
the Cutie site...;-]

I'm sure the Canadian authorities are proud to
have Masa helping them out with his on line guide.
Probably saves them a lot of time and money as they
can just refer questions to the Cutie site.

Curtis - Tongue in cheek humor? You sure don't seem to
have a handle on it. Of course I was commenting on Masa's
insistance that 2m was the only thing that would work when
storms brought the power down.

Yet true to form, Masa answers in that typical Cutie way
of his. See below -

Masa wrote:
...begin quote...
actually phone patch was available to order some pizza (or anything
else what one needed) during the emergency and many people did use the
phone patch.
...end quote...

Guess the storm wasn't that bad after all...

Can someone help me with a pointer to that ruling?

I'm a little familiar with some of the FCC rulings
and district court rulings but I was not aware that
the question had ever made the Supreme Court.

I'd really like to know.

Masa, what is it you would like to do on Amateur radio
if it's not all the stuff Tim listed?

I'm not a statistics expert, like masa ;-], but I
seem to remember there are about 600,000 hams in the
US. Correct me if I'm wrong (like I have to ask).
So let's see, using Masa's percentage above, there
are about 6 hams interested in the things Tim has
listed. Tim is and I am, who are the other four?

The fact that you include a line in the documentation saying "This information is NOT free" and then post the cost in Canadian dollars makes it a commercial endeavor. It's amazing you would post such garbage and not even bother to run a spell checker or have someone proof read it. I love the part where you claim it's "professionally done" haw haw, keep 'em comming Masa your an endless source of amusement.

Here are some local Scouting and Amateur Radio upcoming events, with info on how to get involved. For other persons interested nation wide or internationally, I will be glad to provide info on how I have assisted in organizing these events, so that you can benefit from my experience to organize similar events in your area.

Boy Scouts Amateur Radio Licensing Class, Thursdays 7pm starting February 19 and concluding March 26. Location is in Azle, just NW of Fort Worth. More info on attending, contact class coordinator Paul Finch on the 147.16+110.9 repeater or at 817/444-0448. There is no charge for the class, the optional text book is available from Azle Radio Shack, choice of _Now You're Talking_ by the ARRL ($19.95), or _Nocode Tech_ by Gordon West ($9.99). Great opportunity for Scouts, Scout parents and Scout leaders to pursue this communications achievement.

Circle T Girl Scout Council, Inc. is proposing a "Hot Stuff" Amateur Radio event
for Saturday, July 25 1998. TriCounty Amateur Radio Club of North Texas will sponsor the event. The Scouts will have the opportunity to observe and actually operate amateur radios in a field exercise. planned stations include world band HF, local VHF/FM, satellite/spacecraft, SSTV/ATV, computer packet radio, radio direction finding. For information on attending, contact Dana Triplitt KC5QAT (Scout activity director) at 817/444-3610, or at te@airmail.net.

Jamboree On The Air is a nation wide scouting event planned for Oct 17, 1998. Scouts will operate stations in a contest to exercise their radio communications skills.
This annual event is very popular, and attracts estimated 40,000 Scouts. For more information, contact your local scouting council, and get the American Radio Relay League Scouting Handbook at no charge via the WWW at this address: http://www.arrl.org/ead/scouthbk/ .

For Amateur Radio information, try these two URLs: www.arrl.org and www.qsl.net/tcarc-ntx .

Have fun!

Will trade a GRE SuperConverter 9001 (like new, w/box,cable,battery)
for a HTX-202 or possibly another HT in good shape that has
accessories included.

Selling because have since aquired radio w/800 MHZ receive.

If interested, please e-mail

Posting for a friend who needs a power supply for a SWAN 500 HF rig, either an OEM unit or suitable replacement. Also, though he can't figure out Usenet, he seems to think he could actually build one if somebody could supply plans :)

Please respond to Bob directly if you can help:

> Fair enough?

No. A better solution would be to force non Morse tested operators to
remove any access for a Key of any kind to their Transmitters and be
allowed on any freq not designated as Morse only. We definetly don't
want those guys fooling around with something not proven to the rest of
Hamdom. Also we should force them to use a distinct non standard Call.
Much like a vanity Call now. That will teach them whats what.

$900 is quite a bit to ask for this receiver in "as is" condition.

Sorry about tha Lumpy. The key word I saw in what you posted was Colorado. I have seen too many posts in other places where someone from Colorado was lumping all Deer Hunters from Texas together and bad mouthing us. That is one reason the last time I went out of state on a hunt I spent my money in New Mexico.

It was an instant reflex. If you need any help in bashing Code Sapper let me know.

You seem to be a little unsure here my friend, and because you are I
will suggest you take care in calling someone 'boy'. In fact, I suggest
you consider not doing that in any event in the future. It's only a
suggestion but even someone from your part of the country can understand
the stupidity in using that term in that manner.

He is what he is and you may never understand just what that is, and if
you did I doubt you would know what to do with it, but since I don't
know you I will give you the benifit of the doubt this time. The debate
here is about Code Testing but some of you want to make it about the
people for or against it. Real bad move.   There are points on both
sides but you loose points when you insist on attacking others
personally. =

```
- 10 pts for you =

Yeah... I'd like that citation as well.. can't imagine a case invloving
amateur radio that would have been able to make it all the way to the
supreme court and have a decision made....

No problem Curtis. And thanks for the offer but Code Slopper
provides plenty of ammunition himself.

Pesky deer and elk eating all our garden flowers.

Ok, I'll bite.   Doesn't any of you emergency oriented Hi Speed operators have a back up generator? I mean back in the 40-50s we had one ready to go at the first sign of problems. Maybe because we had no 7/11 to run to. BTW, must be some puny emergency that would suggest a closed door between you and some batteries needed to save the day would stop you.

Get Real

Careful Cecil, you sure you want to be delving into the black, mystic
art of artful OOKing in one of these black hole emergencys? Some day a
real emergency will come along and a lot of people will be stepping all
over themselves and everyone else trying to prove an unnessessary mode
will still do the trick when someone on CB has already handled the
problem.   CB, (11 m) is HF. Many are installed in cars and trucks and
boats and airplanes and skate boards and one guy I know has one on his
Saddle. They have 12V supply and relative to VHF, they have talk power.
I'm sure that will upset some here but truth like frequency is where you
find it.

Regards,

Ed

Gee, that would be those two small slivers of spectrum at the very
bottom of the 6m and 2m bands ... the ONLY "Morse only" spectrum
in the ham bands ... and completely open to no-code techs ...

Right, brand the heathens with "the mark of Cain" ... right? ... that's
good old fashioned hellfire and brimstone Morseodism at its best :-)

Professionally written Physics Textbook what we use at this University
has at least 20 typing errors which include values and spelling
mistakes.

We get assignment each week from the text book but we (professor, TA
or else ourselves) must correct the question because the questions
and/or answers are wrong.

Each textbook costs you $80CAN. What are you going to do ??
